Memo

Date: July 24, 2018

To: County of San Bernardino, California

From: Advance Planning Division
Land Use Services Department

Subject: Jason Paukovits, Senior Air Quality/Greenhouse Gas Scientist, FirstCarbon Solutions

Subject: Moon Camp Air Quality Memorandum

PROJECT ANALYSIS METHODOLOGY AND RESULTS

Regional Air Quality Significance Thresholds

The South Coast Air Quality Management District (SCAQMD) regional thresholds apply to all aspects of the project including construction and operations. The mass emission-based regional thresholds were established because a project's emissions could potentially contribute to the basin's regional emission burden and affect air quality many miles away from a project location. The SCAQMD recommends regional significance thresholds for volatile organic compounds (VOC), nitrogen oxides (NO_x), sulfur oxides (SO_x), carbon monoxide (CO), and particulate matter (PM₁₀, and PM_{2.5}). Any construction or operational-related emissions from the project in excess of any of the thresholds presented in Table 1 would be considered to result in a significant impact.

Table 1: SCAQMD Regional Significance Thresholds

Pollutant	Mass Daily Thresholds (lbs/day)	
	Construction	Operation
NO _x	100	55
VOC	75	55
PM ₁₀	150	150
PM _{2.5}	55	55
SO _x	150	150
CO	550	550

Notes:
 From SCAQMD CEQA Handbook
 NO_x = nitrogen oxides
 SO_x = sulfur oxides

Pollutant	Mass Daily Thresholds (lbs/day)	
	Construction	Operation
VOC = Volatile Organic Compounds		
CO = carbon monoxide		
PM ₁₀ = particulate matter with an aerodynamic resistance diameter of 10 micrometers or less;		
PM _{2.5} = particulate matter with an aerodynamic resistance diameter of 2.5 micrometers		

Local Air Quality Significance Thresholds (LSTs)

The SCAQMD has developed localized significance threshold (LST) methodology that can be used by public agencies to determine whether or not a project may generate significant adverse localized air quality impacts. LSTs are only applicable to NO_x, CO, PM₁₀, and PM_{2.5} emissions. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard, and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor.

The SCAQMD created a series of lookup tables that present the maximum emissions (i.e., LSTs) that a project can emit without contributing to an existing or new air quality standard exceedance. The latest version of threshold values was developed between 2006 and 2008. The value of the LST depends on the project location, size of the project area, and distance to the nearest sensitive receptor. The project is located within SRA 38 (East San Bernardino Mountains). The nearest sensitive receptors from the project site would be in the residential area located 25 meters. Therefore, on-site emissions from construction activities were compared with the 2006-2008 LSTs for a 5-acre site in SRA 38 at a distance of 25 meters to the nearest receptors.

CalEEMod

The California Emissions Estimator Model (CalEEMod), developed for the California Air Pollution Officers Association (CAPCOA) in collaboration with several California air districts, is a statewide land use emissions model designed to estimate air quality criteria pollutant emissions associated with construction and operations of a project. The latest version of CalEEMod, version 2016.3.2, incorporates the California Air Resources Board (CARB) OFFROAD and EMFAC 2014 emission factors, and the 2016 update to the Title 24, Part 6 standard (California Building Standards Code).

Construction

The project consists of 50 single family houses and 4.24 acres of paved surfaces, which include parking lots and new roadways. The analysis assumes that project construction would start in January 2018 and would last for a year. Construction activities include grading, building construction, paving and architectural coating. There are no existing buildings or hardscape surfaces onsite. The cut and fill would

be balanced on-site. The construction emissions estimated using the latest CalEEMod model are provided in Table 2.

As noted from Table 2, with the exception of NO_x emissions, the estimated construction emissions from the CalEEMod model are lower than the corresponding emissions shown in RRDEIR No.1. Further, none of the emissions estimated using the CalEEMod model exceed any of the regional or localized emission significance thresholds. The estimated emissions shown in RRDEIR No.1 (Table 4.2-6), however, exceed the SCAQMD's localized significance thresholds for PM₁₀ and PM_{2.5} thereby requiring mitigation. After mitigation, as shown in Table 4.2-7 of the RRDEIR No.1 (page 4.2-32), the project's construction emissions would not exceed any SCAQMD's construction emission significance thresholds. This analysis demonstrates that the construction emissions contained in the RRDEIR No.1 provide a conservative emission estimate (in terms of overestimating construction emissions) when compared to those emissions calculated using the most up-to-date emissions estimating model, CalEEMod. Therefore, the project's construction emissions provided in the RRDEIR No.1 are sufficient in describing the impacts of the project's construction emissions.

Table 2: Comparison of Project Emission—Construction (Unmitigated)

Analysis	Construction Criteria Pollutants (pounds/day)				
	VOC	NO _x	CO	PM ₁₀	PM _{2.5}
RRDEIR No.1 (Table 4.2-6)	69.3	53.3	68.7	43.5	10.5
CalEEMod (new) ⁽¹⁾	54.3	59.6	36.2	11.5	6.1
SCAQMD Regional Construction Threshold	75	100	550	150	55
Significant Impact?	No	No	No	No	No
Local Significant Threshold ⁽²⁾		270	2,075	14	9
Significant Impact?	N/A	No	No	Yes in RRDEIR No. 1 No for CalEEMod	Yes for RRDEIR No. 1 No for CalEEMod

Notes:

(1) Although the localized analysis is typically based on a comparison of on-site emissions to the LSTs, the table conservatively includes the total regional emissions compared to the LST.

(2) The localized significance thresholds were updated to the latest values shown in the SCAQMD's Mass Rate Emission Tables (2006-2008) for a 5-acre project, in Source Receptor Area 38 and a distance to sensitive receptor of 25 meters; website: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/appendix-c-mass-rate-lst-look-up-tables.pdf>.

N/A = the SCAQMD has not defined a localized threshold for VOC emissions

Source of CalEEMod emissions: See Appendix E of this FEIR

Operations

Table 3 below shows the comparison of the long-term operational emissions between emissions in the RRDEIR No. 1 (Table 4.2-9 [page 4.2-34] and Table 4.2-10 [page 4.2-35]) and the long-term operational emissions estimated using the CalEEMod model.

As noted from Table 3, the CalEEMod update to the project's long term operational emissions are lower than the corresponding emissions shown in the RRDEIR No.1 tables with the exception of NOx emissions. The operational emission estimates for both the RRDEIR No. 1 and CalEEMod are less than the SCAQMD's regional operational emission significance thresholds. Therefore, the emissions shown in the RRDEIR No. 1 represent a conservative estimate of the project's long-term operational emissions and are sufficient in describing the project's long-term operational impacts.

Table 3: Comparison of Long-Term Operational Project Emissions

Analysis	Operational Criteria Pollutants (pounds/day)				
	VOC	NOx	CO	PM ₁₀	PM _{2.5}
RRDEIR No. 1 (Table 4.2-9 and Table 4.2-10) ^{(1), (2)}	36.8	8.8	104.8	12.6	7.4
CalEEMod ^{(1),(2)}	9.5	10.8	32.2	4.5	1.9
SCAQMD Regional Operational Threshold	55	55	550	150	55
Significant Impact?	No	No	No	No	No

Note:
⁽¹⁾ The higher of the summer and winter emissions is listed for each pollutant
⁽²⁾ The pollutant emissions' include the operation of personal watercraft, Table 4.2-9 of the RRDEIR
Source: CalEEMod (Appendix E of this FEIR)

CONCLUSION

The conservative analysis of the construction and operational emissions provided in RRDEIR No. 1 is sufficient in describing the air quality impacts of the project.
