Hazardous Materials Division
Site Remediation Program
620 South "E" Street
San Bernardino, CA 92415-0153

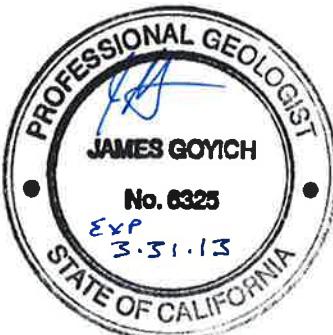

Attention: Curtis Brundage – Hazardous Materials Specialist

Subject: **Site Remediation Summary Report**
14636 Randall Avenue
Fontana, California

Environmental Logistics, Inc. (ELI) presents this summary report documenting the removal and disposal of hazardous materials containers, tires, and stained soils from the site referenced above. The San Bernardino County Assessor's Parcel Number for the site is APN 0231-021-57. A Limited Subsurface Investigation for the site was completed by CHJ Incorporated (Job No. 11309-9, June 10, 2011). Based on the data presented herein, further investigation or remediation of this area may not be warranted at this time. We trust this report meets your current requirements. If you have any questions regarding this report, please feel free to contact us at (909) 546-1546.

Respectfully submitted,
Environmental Logistics, Inc.

James Goyich,
Project Geologist, P.G. No. 6325

1.0 INTRODUCTION

This summary report documents the removal and disposal of hazardous materials containers, tires, and stained soils from the property at 14636 Randall Avenue, Fontana California. The site location is presented on Figure 1. The San Bernardino County Assessor's Parcel Number for the site is 0231-021-57. A Limited Subsurface Investigation for the site was completed by CHJ Incorporated (Job No. 11309-9, June 10, 2011). The recommendations of this study included the following elements:

- Removal of used tires
- Removal of hazardous materials containers
- Removal of stained soil

This report also recommended use of a "licensed hazardous materials hauler" to complete this work. There were three areas of surficial soil staining identified by CHJ in this report. Areas proximal to sample locations S-1, S-3 and S-5 were stained at the surface to a depth of between one and two feet below ground surface (bgs).

Environmental Logistics, Inc. (ELI) was contracted to conduct the removal and remediation activities recommended in the Phase II Investigation.

2.0 FIELD ACTIVITIES

2.1 Remedial Activities

Remedial activities consisted of the removal of used tires; collection and removal of hazardous wastes in containers at the site, excavation of stained soils identified by CHJ (Near Sample Locations S-3, S-5 and S-7 on attached CHJ Site Map), and confirmatory sampling at the base of excavations. ELI collected grab samples at the base of excavation under the supervision of a professional geologist to document the removal of site related constituents of concern at the completion of excavation activities.

ELI classified, profiled, and manifested all wastes according to State and Federal regulations. Unknown chemicals in containers were classified using Haz-Cat methodology. All wastes were segregated and placed into DOT-approved containers for transport. Compromised drums were over-packed according to DOT 49 CFR 173.3 (C). Copies of manifests and bills of lading for the clean-up are attached to this report in Appendix B.

Two areas of oil staining were observed and remediated by excavating the surficial stained soil using a backhoe and loader. A total of 38.38 tons of affected soil were excavated, loaded onto roll off bins and transported to Filter Recycling Services in Rialto, California on two hazardous waste manifests. The soil was transported off site on April 20, 2012 by ELI. The excavations were backfilled with site soil to prevent injuries to site workers.

The table below presents a listing of other materials that were containerized and transported off site to Filter Recycling Services on April 23, 2012.

Quantity	Materials
14 Drums	Non-RCRA Hazardous Waste Liquid (oily water)
3 Drums	Non-RCRA Hazardous Waste Solid (empty drum)
2 Cardboard Boxes	Paint Related Material (commodity packed – 600 lb.)
2 Drums	Paint Related Material (commodity packed – 110 lb.)
1 Cardboard Box	Non RCRA Hazardous Waste Liquid (commodity packed – 400 lb.)

2.2 Soil Sampling

Three soil samples were collected at the locations shown on Figure 2 in Appendix A. Samples were collected from insitu soil at the bottom of excavation or in hand augered borings below the base of excavation. The grab samples were collected directly into laboratory prepared 4-ounce glass jars with Teflon® lined lids. The samples were stored for transport in ice-chilled chests labeled with the site name, sample number, sample depth, and the date and time of collection and this data was recorded on the chain-of-custody documentation. Sample analysis was conducted at Enviro-Chem, a state certified analytical laboratory. Each sample was tested for Petroleum Hydrocarbons by Test Method EPA 8015M/Carbon Chain, and VOCs by Test Method EPA 8260B and CAM metals at the request of the San Bernardino County Fire Department, Hazardous Materials Division.

Soils consisted of brown, silty, fine to coarse grained sand, damp with a slight hydrocarbon stain and odor noted. Photographs of the excavations are presented below.

1. Western Excavation Area

2. Eastern Excavation Area

3.0 SITE GEOLOGY AND HYDROGEOLOGY

The City of Redlands is located in the center of the San Bernardino Valley, a geologically young basin situated south of the San Bernardino Mountains and north of Santa Ana River and is located within the Transverse Ranges Geomorphic Province. The project site is located approximately 1,127 feet above mean sea level near the center of the property. The topography in the area slopes downward to the south, although the project site is mostly level. The United States Department of Agriculture (USDA), National Cooperative Soil Survey for San Bernardino County indicates that the project site is located in an area of alluvial fans. Soils situated on alluvium foundation are typically characterized by unconsolidated, poorly sorted sand, gravel, and silt. The majority of the city of Fontana rests on a wide variety of alluvium soils which are typically coarse grained near the foothills and grading to finer sands and silt toward the south. The project site is situated on mostly fill material and graded Holocene Alluvium.

Depth to groundwater in the site vicinity is unknown but is estimated by the 2010 Fontana Water Company, Urban Water Management Plan at greater than 300 feet below ground surface in the site vicinity. Groundwater is known to flow southwesterly toward the Santa Ana River in the site vicinity.

4.0 LABORATORY ANALYSIS

At the request of the San Bernardino County Fire Department, Hazardous Materials Division, the two soil samples collected were tested for fuel range hydrocarbons by EPA Method 8015 Modified (Fuel Fingerprint), and for volatile organic compounds (VOCs) by EPA Method 8260B and for CAM 17 metals concentrations.

Results of the TPH-fuel fingerprint indicate that the hydrocarbons detected are in the motor oil range. This is consistent with the results of VOC testing showing a marked lack of VOCs in all samples tested. Metals concentrations were below STLC concentrations or not detected in all samples tested. The table below presents a summary of the TPH-Carbon Chain testing results.

TPH-CC by 8015M	Depth	C4-C10	C11-C22	C23-C35
Randall #1	8"	ND	ND	18,300 ppm
Randall #2	10"	ND	1050 ppm	6,230 ppm
Randall #2b	18"	ND	826 ppm	ND

ND=Not Detected above laboratory equipment detection limits

5.0 CONCLUSIONS AND RECOMMENDATIONS

Hazardous materials, universal wastes, tires, oil stained soil, empty drums and other waste materials were removed from the site between April 20 and 23, 2012. Excavations were backfilled with site soils to prevent slip/trip/fall injuries.

Based on the observations made during the remediation services and the laboratory testing results, residual concentrations of oil ranged hydrocarbons are present in the area immediately beneath the former stained areas. VOCs and elevated metals concentrations were not detected. The bulk of stained soils observed during remediation. Based on the attenuation rate observed during excavation, it is unlikely that the affected soil extends more than a few feet below the base of the ELI excavations. With groundwater depths exceeding 300 feet below ground surface, further excavation or sampling at depth may not be warranted at this time.

6.0 LIMITATIONS

This report has been prepared for the exclusive use of the Estate of Howard B. Carpenter and Shirley Jean Carpenter (Client) and the San Bernardino County Fire Department Hazardous Materials Division. The conclusions and recommendations rendered in this report are opinions based on readily available information obtained to date within the scope of the work authorized by the client. The scope of work for this project was developed to address the needs of the client and may not meet the needs of other users. Any other use of, or reliance on, the information and opinions contained in this report without the written authorization of ELI, is at the sole risk of the user.

The results contained in this report, are based upon the information acquired during the performance of the approved scope of services. It is possible that variations exist beyond or between points explored during the course of the evaluation, and that changes in conditions can occur in the future due to the works of man, contaminant migration, broadening of knowledge, variations in rainfall, temperature, and/or other factors not apparent at the time of the field work.

The services performed by ELI have been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the site vicinity. No warranty is expressed or implied.

Dear Mr. Goyich:

The **additional analytical results** for the soil samples, received by our laboratory on April 20, 2012, are attached. The samples were received chilled, intact, accompanying chain of custody and also stored per the EPA protocols.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

Zinc (Zn)	35.1	0.5	1	5,000	250	6010B

COMMENTS

DF = Dilution Factor

PQL = Practical Quantitation Limit

Actual Detection Limit = PQL X DF

ND = Below the Actual Detection Limit or non-detected

TTLC = Total Threshold Limit Concentration

STLC = Soluble Threshold Limit Concentration

@ = Must meet both the STLC Limit at 560 and EPA-TCLP Limit at 5

* = STLC analysis for the metal is recommended (if marked)

** = Additional Analysis required, please call to discuss (if marked)

*** = The concentration exceeds the TTLC Limit, and the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

-- = Not analyzed/not requested
