PROJECT DESCRIPTION:

Summary

The proposed Project consists of a General Plan Amendment (GPA)/Policy Plan Amendment and corresponding Zone Change (ZC) within the subject property (APN 0602-371-06). The Project site occupies 40 gross acres of undeveloped land in the unincorporated community of Joshua Tree, San Bernardino County, California. San Bernardino County is the lead agency for compliance with the California Environmental Quality Act (CEQA) and for considering the GPA and ZC applications.

Currently, the Project site is dual-zoned for residential and commercial development. Seven acres on the south side is designated as Commercial (C) and zoned as Joshua Tree/General Commercial-Sign Control Primary (JT/CG-SCp). The remaining 33 acres of the site is designated as Medium Density Residential 5-20 du/ac (MDR) and zoned as Joshua Tree/Multiple Residential (JT/RM). The proposed GPA and ZC will increase the area under the Commercial land use category and JT/CG-SCp land use district (zoning) from 7 acres to 16 acres, and decrease the area under the MDR land use category and JT/RM zoning from 33 acres to 24 acres on the subject site. Details are shown in Table 1 below and in Exhibits 4 and 5. The GPA and ZC for the subject site have been requested following the completion of a Letter of Map Revision (LOMR) with the Federal Emergency Management Agency (FEMA) prepared for Joshua Tree Creek, which was approved on March 21, 2023 (see Appendix D). The proposed boundaries of the commercial and residential land uses correspond to the approved realignment of the creek. Details on the LOMR are explained below under existing site conditions and shown in Exhibits 6 and 7.

Table 1. Existing and Proposed Project Site Land Use and Land Use Zoning Districts

Land Use/Land Use Zoning District	Existing Acreage	Proposed Acreage
Medium Density Residential 5-20 du/ac (MDR) / Joshua Tree/Multiple Residential (JT/RM)	33	24
Commercial (C) / Joshua Tree/General Commercial-Sign Control Primary (JT/CG-SCp)	7	16
Total	40	40

Surrounding Land Uses and Setting

The existing uses and zoning districts surrounding the Project site are provided in Table 2.

Table 2. Existing Land Use and Land Use Zoning Districts

Location	Existing Land Use	Land Use Zoning District
Project Site	Vacant and Undeveloped land	Joshua Tree/Multiple Residential (JT/RM) and Joshua Tree/General Commercial-Sign Control Primary (JT/CG-SCp)
North	Vacant, undeveloped land and residential use (apartments)	Joshua Tree/Rural Living (JT/RL) and JT/RM
South	Various commercial uses and some vacant buildings/lots	JT/CG-SCp
East	Joshua Basin Water District Lay Down Area, industrial uses, and vacant residential properties and lots/land	Joshua Tree/Community Industrial (JT/IC) and JT/CG-SCp
West	Vacant, undeveloped land, residential use (apartments) and post office	JT/RM and JT/CG-SCp

Project Site Location, Existing Site Land Uses and Conditions

The Regional Location Map (Exhibit 1), Project Vicinity Map (Exhibit 2), and Project Location Map (Exhibit 3) include the regional location and aerial photos of the Project site and the immediate surrounding area. The Project proposes a GPA and corresponding ZC on the site (APN 0602-371-06) and does not include any development plans. Existing and proposed land use categories and zoning districts on the Project site are shown in Exhibits 4 and 5.

The Project site is vacant and undeveloped. The site is surrounded by public roads on three sides—Twentynine Palms Highway on the south, Sunset Road on the east, and Verbena Road (unpaved along Project site boundary) on the north. There is one additional named road that crosses the Project site, Chollita Road in the northern portion of the site running parallel to Verbena Road. Scattered refuse including construction and landscaping debris are found throughout the site. The site has a relatively diverse vegetation including Joshua trees, yucca, creosote bush, several varieties of cholla and beavertail cactus, and other small grasses and brushes.

Joshua Tree Creek runs through the Project site from southwest to northeast. The main channel, including the creek centerline, was located on the southern portions of the site (Exhibit 6), which roughly corresponded to the floodway mapped in the FEMA Flood Insurance Rate Map (FIRM) No.06071C8140J (effective date of September 2, 2016). However, Joshua Tree Creek has been significantly altered by development in the Project vicinity, including channelization to the southwest, which has caused the creek to migrate north and run diagonally through the site. Based on new mapping and modeling efforts, a LOMR was prepared to modify floodway and floodplain locations in the Project area based on updated topographic data. The LOMR was approved by FEMA with an effective date of August 2, 2023 to revise the FIRM No.06071C8140J (Exhibit 7) and No.06071C8145J (see Appendix D for details). The LOMR confirmed that the creek centerline had migrated north approximately 460 feet, leading to floodplain and floodway revisions in the area. Within the Project site, the regulatory floodway moved north from the south side to a central diagonal (southwest to northeast) through the site, which greatly increases the developable area in the southern portion of the site. Therefore, the LOMR which is consistent with

APN: 0602-371-06

March 2025

the proposed GPA and ZC which expands the commercial land use category and zoning district to match the developable area south of the creek.

ADDITIONAL APPROVAL REQUIRED BY OTHER PUBLIC AGENCIES

Federal: None.

State of California: None.

County of San Bernardino: Land Use Services Department – Building and Safety, Public Health-Environmental Health Services, Department of Public Works.

Regional: None.

Local: None.

CONSULTATION WITH CALIFORNIA NATIVE AMERICAN TRIBES

Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

Upon receipt of the GPA/ZC application and this Initial Study, the County of San Bernardino staff will initiate tribal consultation pursuant to AB 52 and SB 18.

EVALUATION FORMAT

This Initial Study is prepared in compliance with the California Environmental Quality Act (CEQA) pursuant to Public Resources Code Section 21000, et seq. and the State CEQA Guidelines (California Code of Regulations Section 15000, et seq.). Specifically, the preparation of an Initial Study is guided by Section 15063 of the State CEQA Guidelines. This format of the study is presented as follows. The project is evaluated based on its effect on 20 major categories of environmental factors. Each factor is reviewed by responding to a series of questions regarding the impact of the project on each element of the overall factor. The Initial Study checklist provides a formatted analysis that provides a determination of the effect of the project on the factor and its elements. The effect of the project is categorized into one of the following four categories of possible determinations:

Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less than Significant	No Impact
--------------------------------	--	-----------------------	-----------

Substantiation is then provided to justify each determination. One of the four following conclusions is then provided as a summary of the analysis for each of the major environmental factors.

1. **No Impact:** No impacts are identified or anticipated and no mitigation measures are required.
2. **Less than Significant Impact:** No significant adverse impacts are identified or anticipated and no mitigation measures are required.
3. **Less than Significant Impact with Mitigation Incorporated:** Possible significant adverse impacts have been identified or anticipated and the following mitigation measures are required as a condition of project approval to reduce these impacts to a level below significant. The required mitigation measures are: (List of mitigation measures)
4. **Potentially Significant Impact:** Significant adverse impacts have been identified or anticipated. An Environmental Impact Report (EIR) is required to evaluate these impacts, which are (List of the impacts requiring analysis within the EIR).

At the end of the analysis the required mitigation measures are restated and categorized as being either self- monitoring or as requiring a Mitigation Monitoring and Reporting Program.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below will be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|--|---|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Energy |
| <input type="checkbox"/> Geology/Soils | <input type="checkbox"/> Greenhouse Gas Emissions | <input type="checkbox"/> Hazards & Hazardous Materials |
| <input type="checkbox"/> Hydrology/Water Quality | <input type="checkbox"/> Land Use/Planning | <input type="checkbox"/> Mineral Resources |
| <input type="checkbox"/> Noise | <input type="checkbox"/> Population/Housing | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation | <input type="checkbox"/> Tribal Cultural Resources |
| <input type="checkbox"/> Utilities/Service Systems | <input type="checkbox"/> Wildfire | <input type="checkbox"/> Mandatory Findings of Significance |

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation, the following finding is made:

<input checked="" type="checkbox"/>	The proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION shall be prepared.
<input type="checkbox"/>	Although the proposed project could have a significant effect on the environment, there shall not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION shall be prepared.
<input type="checkbox"/>	The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
<input type="checkbox"/>	The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
<input type="checkbox"/>	Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Issues	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant	No Impact
I. AESTHETICS – Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create a new source of substantial light or glare, which will adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: (Check if project is located within the view-shed of any Scenic Route listed in the General Plan):
Countywide Plan; Submitted Project Materials; California State Scenic Highway System Map by Caltrans

a) *Have a substantial adverse effect on a scenic vista?*

No Impact. The Joshua Tree community is located in the Morongo Basin in the southwestern corner of the Mojave Desert. In the basin, Joshua Tree National Park lies to the south of the community and the Marine Corps Air Ground Combat Center is to the northeast. The Mojave Desert is separated from the Sonoran Desert to the south by the Little San Bernardino and Eagle Mountains, which are extensions of the Transverse Range. The western Mojave Desert is a flat, sparsely vegetated region interspersed with mountain ranges and dry lakes.

The Project site consists of vacant undeveloped land in the Joshua Tree community in the Desert Region of San Bernardino County. Vegetation on the subject site includes Joshua trees, yucca, smoke trees, various cacti and other native and non-native trees, shrubs and grasses. Scenic vistas in the Project area include low hills to the north and south, desert floor, and vegetation. Views of these scenic resources tend to be partially blocked by existing development depending on the location.

The Project consists of a GPA and ZC that would alter the boundary between two land use categories and corresponding zoning districts on the subject property. Such policy change will have no impact on scenic vistas, because no development is proposed. In the future, development proposed on the Project site will be required to undergo CEQA review which would address potential impacts on scenic vistas. The San Bernardino County Countywide Plan 2020 (Countywide Plan) and the Joshua Tree Community Action Guide include policies that promote new developments that are compatible and consistent with the natural and built environment and set forth design guidelines that define the unique character of Joshua Tree.

Future development onsite will be subject to development standards set forth in the San Bernardino Development Code, including height limits and landscaping standards that protect scenic views and scenic quality. These development standards are designed to limit impacts on scenic vistas by limiting building height, providing setbacks to allow view corridors, and limit building coverage. When development is proposed for the Project site, its compliance with these standards will be analyzed to determine whether the design will impact scenic vistas surrounding the Project site.

Overall, the modification of the General Plan and Zoning maps will have no impact on scenic vistas.

- b) *Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?*

Twentynine Palms Highway borders the site on the south and is eligible for designation as a State scenic highway by Caltrans throughout Joshua Tree. It is not, however, designated at or surrounding the Project site. The site is vacant, and does not include rock outcroppings or historic buildings. The site does contain Joshua trees, which are protected under California law (see Section IV, Biological Resources).

Project consists of a GPA and ZC that would alter the boundary between two land use categories and corresponding zoning districts on the subject property. Such policy change will have no impact on scenic resources, because none occur on the site.

- c) *In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

The Project consists of a GPA and ZC that would alter the boundary between two land use categories and corresponding zoning districts on the subject property. Such policy change will have no impact on visual character or public views, because no development will occur. In addition, the GPA and ZC would change the acreage of Medium Density Residential and Commercial lands on the site, but would not change the designations themselves. Therefore, although the amount of Medium Density and Commercial land will change, the character of that development will be substantially the same as that currently allowed under Future development of the Project Site would be

in accordance with the Countywide Plan and Development Code and subject to CEQA review.

Therefore, the GPA and ZC will have no impact on either the visual character or the quality of public views on and surrounding the Project site.

- d) *Create a new source of substantial light or glare, which will adversely affect day or nighttime views in the area?*

The Project consists of a GPA and ZC which will redistribute the allowed land uses on the site, resulting in an increase in Commercial land, and a decrease in Medium Density Residential land. This modification of the Countywide Plan and Zoning maps will have no impact on light and glare, because no development will occur.

Future development on the site will be subject to project-specific review under CEQA, and will be required to conform to the San Bernardino County Development Code that requires shielding of outdoor light fixtures, minimizing light pollution, and other measures to minimize glare and prevent excessive lighting in the Desert Region. To preserve the dark sky environment, future development would be required to adhere to the County Development Code Section 83.07.060 Glare and Outdoor Lighting for Mountain and Desert Regions. As proposed the GPA and ZC will have no impact on light and glare.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

	<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
II.	AGRICULTURE AND FORESTRY RESOURCES - In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a)	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d)	Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<i>SUBSTANTIATION:</i> (Check <input type="checkbox"/> if project is located in the Important Farmlands Overlay):					
Countywide Plan; California Department of Conservation Farmland Mapping and Monitoring Program; Submitted Project Materials					

- a) *Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*
- b) *Conflict with existing zoning for agricultural use, or a Williamson Act contract?*

a), b) No Impact. Agricultural production is generally not active in the Morongo Basin, nor in the Joshua Tree community. Commercial farming has not occurred in the area for decades, likely due to its arid environment. Neither the Countywide Plan nor the Development Code have agricultural designations or districts in the Joshua Tree community, but in certain residential districts incidental agricultural and similar compatible uses are allowed.

The Joshua Tree community and most of the Desert Region of San Bernardino County are not mapped by the California Department of Conservation Farmland Mapping and Monitoring Program. This is also reflected in the Policy Map NR-5 Agricultural Resources in the Natural Resources Element of the Countywide Plan. The community of Joshua Tree contains no agricultural nor any lands covered by a Williamson Act contract, and no lands are designated for agricultural purposes in the Countywide Plan.

The GPA and ZC will have no impact on agricultural resources.

- c) *Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?*
- d) *Result in the loss of forest land or conversion of forest land to non-forest use?*

c), d) No Impact. The proposed Project consists of a General Plan and Zoning map amendment only, and will not result in new development. The Project site is designated and zoned for residential and commercial development, which would not change with the proposed GPA and ZC. There are no lands designated for forestry or timberland in the Joshua Tree area. The Project will not conflict with or cause a loss of forest land, and no impact will occur.

- e) *Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?*

No Impact. The proposed Project will not result in any direct or indirect impact on agricultural or forest land, nor would it result in the conversion of such land to non-agricultural or non-forest uses. Adoption of the proposed GPA and ZC will have no impact on agricultural and forestry resources.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
III. AIR QUALITY - Where available, the significance criteria established by the applicable air quality management district or air pollution control district might be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: *(Discuss conformity with the Mojave Desert Air Quality Management Plan, if applicable):*

Countywide Plan; Submitted Project Materials; MDAQMD 2020 CEQA and Federal Conformity Guidelines

a) *Conflict with or obstruct implementation of the applicable air quality plan?*

Less Than Significant Impact. The community of Joshua Tree, including the Project site, lies within the Mojave Desert Air Basin (MDAB), and is under the jurisdiction of the Mojave Desert Air Quality Management District (MDAQMD). MDAQMD is geographically the second largest of the 35 air districts in the State of California. All development within Joshua Tree is subject to MDAQMD’s 2020 “California Environmental Quality Act (CEQA) and Federal Conformity Guidelines.”

The majority of MDAQMD is in nonattainment for ozone (O3) and suspended particulate matter less than 10 microns in size (PM10) under the CAAQS and NAAQS. A small portion outside the San Bernardino Southeast Desert is also in nonattainment for suspended particulate matter less than 2.5 microns in size (PM2.5) under NAAQS. As a result, MDAQMD has adopted federal attainment plans for ozone and PM10 as well as other attainment plans.

According to MDAQMD’s 2020 CEQA and Federal Conformity Guidelines, a project is non-conforming if it conflicts with or delays implementation of any applicable attainment or maintenance plan. A project is conforming if it complies with all

applicable District rules and regulations, complies with all proposed control measures that are not yet adopted from the applicable plan(s), and is consistent with the growth forecasts in the applicable plan(s) (or is directly included in the applicable plan). Conformity with growth forecasts can be established by demonstrating that the project is consistent with the land use plan that was used to generate the growth forecast. An example of a non-conforming project would be one that increases the gross number of dwelling units, increases the number of trips, and/or increases the overall vehicle miles traveled in an affected area (relative to the applicable land use plan).

The Project proposes a GPA and corresponding ZC within a 40-acre site in Joshua Tree. The site is currently dual-zoned for residential (JT/RM) and commercial (JT/CG-SCp) development on 33 and 7 acres, respectively. The Project proposes decreasing the residential (JT/RM) portion to 24 acres and increasing the commercial (JT/CG-SCp) portion to 16 acres. The Project will not change the total area, type or density of development allowed onsite by the Countywide Plan and Development Code. As such, the Project is expected to have a less than significant impact regarding conflicting with or obstructing implementation of any applicable air quality plan.

- b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?*
- c) *Expose sensitive receptors to substantial pollutant concentrations?*

b), c) No Impact. Criteria air pollutants are those for which state and federal air quality standards (California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS)) have been established. Ambient air quality in the MDAQMD, including the Project area, does not exceed state and federal standards for carbon monoxide, nitrogen dioxide, sulfur dioxide, lead, sulfates, hydrogen sulfide, or visibility reducing particles.

The Project proposes a change in General Plan and Zoning maps only and will have no direct impact on air quality, as it will not generate any construction or development. When future development is proposed on the Project site, the County will undertake CEQA review and assess potential impacts on air quality, including emissions of criteria pollutants and pollutant concentrations near sensitive receptors.

All future projects will be required to adhere to MDAQMD rules and regulations and County requirements for construction related activities to ensure compliance with the attainment or maintenance plans. Applicable standard requirements and best management practices include, but are not limited to, implementation of a dust control and management plan in conformance with MDAQMD Rule 403.

MDAQMD's 2020 CEQA and Federal Conformity Guidelines requires evaluation of air quality impacts using significance threshold criteria in the guidelines, if certain project types are proposed near sensitive receptor land uses. Project types subject to this requirement include industrial projects, distribution centers, major transportation projects, dry cleaners,

and gasoline dispensing facilities. The residential and commercial development allowed on the Project site as a result of the GPA and ZC will not allow these types of uses, and no resulting impact to sensitive receptors would occur.

- d) *Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?*

No Impact. The proposed GPA and ZC has no potential to generate odors, as no development will occur. The proposed GPA and ZC would facilitate commercial and residential development, which typically do not emit odors that would adversely affect a substantial number of people. CEQA review of future development onsite will include analysis of the types of commercial uses proposed, to assure that no significant odors are emitted, or propose mitigation measures should the use generate such odors.

Therefore, no significant adverse impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
IV. BIOLOGICAL RESOURCES - Would the project:				
a) Have substantial adverse effects, either directly or through habitat modifications, on any species identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: (Check if project is located in the Biological Resources Overlay or contains habitat for any species listed in the California Natural Diversity Database):

Countywide Plan; Submitted Project Materials; Focused Survey for Agassiz's Desert Tortoise, Habitat Assessments for Burrowing Owl and Joshua Tree, and General Biological Resource Assessment for a 40-acre± Site (APN 0602-371-06) in the Community of Joshua Tree, San Bernardino County, California, prepared by Circle Mountain Biological Consultants, Inc., February 2021

- a) *Have substantial adverse effects, either directly or through habitat modifications, on any species identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

No Impact. The proposed GPA and ZC will have no impact on any sensitive species, because no development is proposed. Future project proposals will be required by the County to undergo review under CEQA, including the analysis of impacts to on-site resources, as described below.

The unincorporated community of Joshua Tree lies in the western Mojave Desert in San Bernardino County, California. The most common vegetation community in the County and the Joshua Tree community is the Sonoran and Mojave Desert Scrub, which includes various vegetation groups. The Joshua Tree community is located within boundaries of the West Mojave Plan and Desert Renewable Energy Conservation Plan; which are federal plans implemented by the Bureau of Land management (BLM), that do not provide habitat conservation plan (HCP) or natural communities conservation plan (NCCP) coverage for private lands in San Bernardino County. Among the diverse flora and fauna in Joshua Tree and surrounding areas, many special-status species have been documented such as desert tortoise, burrowing owls, and Joshua trees.

The following analysis on potential impacts to biological resources on the subject property is based on the Project-specific biological resource assessment including a focused survey for Agassiz's desert tortoise and habitat assessments for burrowing owl and Joshua tree prepared by Circle Mountain Biological Consultants, Inc (Appendix A). The Project-specific biological resource assessment included a literature review with particular attention to 13 focused tortoise surveys in the Project vicinity between 1990 and 2010 and field surveys onsite and in adjacent areas in 2021 with a focus on Agassiz's desert tortoise and burrowing owl.

The Project site has relatively flat terrain with a slight northeastern slope. Site soils are mostly sandy with scattered rock. Joshua Tree Creek, a USGS-designated blue line stream, flows through the site in a southwest to northeast direction. The plant community onsite is Mojavean creosote bush scrub with dominant perennial species and less dominant perennial shrubs. The site survey identified 60 plant species, of which nine are not native to California, indicating the degraded nature of the site and prevalent urbanization of the immediate surroundings. The survey also identified two reptile, 16 bird and eight mammal species. The presence of California ground squirrels and absence of kit fox and American badger also indicate impaired native habitats onsite due to regional urbanization.

The site survey identified abundant human disturbances onsite, including dirt roads and trails, cross-country vehicle tracks, domestic dog signs (mostly tracks),

dump sites (mostly vegetation), trash and camping debris, and miscellaneous target shooting debris.

Sensitive Plant Species

Desert unicorn-plant is the only state designated special status species identified onsite. It is on the watch list by California Native Plant Society (CNPS) with low degree/immediacy of threats or no threats known. A single seed pod was found in the main channel of Joshua Tree Creek onsite, but no seedling plants were observed. It is likely to occur in active wash areas on the property.

Little San Bernardino Mountains linanthus is a listed plant by CNPS that is rare, threatened, or endangered in California and elsewhere. This diminutive annual plant is extremely difficult to find and requires a focused survey for its detection. This plant is highly likely to occur on the subject property on substrates scoured by Joshua Tree Creek. The County may require a focused survey for the desert unicorn-plant and Little San Bernardino Mountains linanthus to assess potential impacts from future development onsite.

Many other native plant species observed onsite are protected under the San Bernardino County Development Code (Chapter 88.01) and/or the California Food and Agricultural Code (Section 80073), including Joshua tree, Mohave yucca, catclaw acacia, smoke tree, silver cholla, pencil cholla, hedgehog cactus, and beavertail cactus (Exhibit 8). Avoidance and/or mitigation measures, including Tree or Plant Removal Permits per the County Development Code Section 88.01.050, as well as permits for the translocation or removal of Joshua trees from the CDFW would be required if future development onsite could impact Joshua trees, smoke trees and catclaw acacias. The County may also require a Desert Native Plant Assessment to identify the numbers and locations of other protected plants (particularly cacti species) to comply with the California Native Plant Protection Act.

Agassiz's Desert Tortoise

The Mojave population segment of the desert tortoise is federally, and state listed as threatened by the U.S. Fish & Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW). The Mojave segment of desert tortoise was further divided into three species based on recent research, and Agassiz's desert tortoise is the threatened species that occurs in the region surrounding the subject property. During the focused USFWS protocol survey conducted by the Project biologist, no tortoise sign was found either onsite or in adjacent areas. Very limited tortoise sign found in the greater area surrounding the subject site suggests that tortoises that might persist near urban development are being extirpated over time. As such, the Project biologist concluded that Agassiz's desert tortoise is absent from the subject property.

There is limited likelihood of desert tortoises entering the site from adjacent vacant desert areas to the north, either to pass through the site or establish temporary residency. However, human uses and disturbances of the site as observed in the site survey have eliminated tortoises from this site, and the isolation due to immediate surrounding human development limits the likelihood of site recolonization by immigrating tortoises.

Therefore, no impacts to tortoises are anticipated on the Project site. However, since the survey was conducted in 2021 and it is not known when development will occur on the site, additional surveys may be required when development is proposed. Regardless of survey results, tortoises are protected under state and federal laws, and incidental take of the tortoises is prohibited without authorization from USFWS and/or CDFW.

Burrowing Owl

Burrowing owl is designated as a California Species of Special Concern by CDFW, as a Bird of Conservation Concern by the USFWS, and is considered Sensitive by the Bureau of Land Management. A habitat assessment was conducted for burrowing owls in 2021 as part of the Project biological resource assessment. The site survey found no sign of burrowing owl, nor any inactive California ground squirrel burrows or tortoise burrows that are suitable for burrowing owls. In addition, no burrowing owls have been reported during previous surveys within an approximately one-mile radius of the Project site. Therefore, burrowing owls are presumed absent from the subject property.

Other Special Status Species

Several other special status bird species have been observed during previous surveys within an approximately one-mile radius of the Project site. Northern harrier is designated as a California Species of Special Concern, but is not likely to forage and unlikely to nest onsite. Both Cooper's hawk and prairie falcon are designated as a Watch List species by CDFW, the latter also a Bird of Conservation Concern by the USFWS. There are no nesting sites but foraging habitat exists for these species throughout the property. Loggerhead shrike and LeConte's thrasher are both designated as a California Species of Special Concern by CDFW and as a Bird of Conservation Concern by the USFWS. For both species, suitable nesting and foraging substrates are common on the subject property. Future development onsite has the potential to adversely affect loggerhead shrikes and LeConte's thrashers, and further study and mitigation will be required at the time that development is proposed.

To avoid impact on nesting birds including loggerhead shrikes and LeConte's thrashers per the California Fish and Game Code and Migratory Bird Treaty Act, CDFW typically requires that vegetation not be removed from a project site between March 15 and September 15. If it is necessary to commence project construction between March 15 and September 15, a qualified biologist should survey all shrubs and structures within the project site for nesting birds, no more than three days prior to clearing. If an active bird nest is located, the plant in which it occurs should be left in place until the birds leave the nest. No construction is allowed near active bird nests of threatened or endangered species.

In summary, the Project will have no impact on any candidate, sensitive or special status species as it proposes a map change (GPA and ZC) only. When future development is proposed on the Project site, the proponent will be required to comply with local and state laws to avoid or mitigate impacts to special status species through focused surveys, permits, and other measures as described above.

- b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?*

No Impact. The plant community onsite is Mojavean creosote bush scrub. Although there is more vegetation along the main channel of Joshua Tree Creek onsite, no riparian habitat or any sensitive natural community was identified onsite. No impact will occur as a result of the Project or future development onsite.

- c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

No Impact. According to the Project biological assessment, the main channel of Joshua Tree Creek was identified in the southern portion of the Project site, but appeared to have shifted north due to alteration from surrounding development. As explained in the Project description and in Section X, the LOMR approved by FEMA in August 2023 confirmed this change. The Project proposes a mapping change only and will have no impact on the creek. If future development proposed on the subject property has the potential to impact the creek, a jurisdictional water delineation will be required, and a 1602 Streambed Alteration Agreement from CDFW is required for all activities that alter streams.

- d) *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

No Impact. The Project proposes only a map change and will not impact any wildlife movement or corridors. Although Joshua Tree Creek runs through the site and supports certain native plant species onsite, the subject property does not support and is not suitable for any native or migratory fish or a wildlife nursery site. According to the Countywide Plan Policy Map NR-2 Parks and Open Space Resources, the northern portion of the site falls in the Modeled Habitat Linkage, a statewide network of 850 relatively intact Natural Landscape Blocks connected by 192 Essential Connectivity Areas. However, due to the broad, statewide nature of the Modeled Habitat Linkage map, it may not accurately reflect the conservation value of small local areas. The Project site is vacant and undeveloped, but has been subject to human disturbances that degraded the site. There are vacant lands in the immediate Project vicinity, the largest in area being to the north. However, these vacant lands and the Project site are isolated by surrounding urban development and roadways, and would not qualify as wildlife corridors due to their location, size, and conditions. Even Joshua Tree Creek running through the Project site has been altered and impacted by surrounding development and channelization. No significant impact is anticipated from future development onsite.

- e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

No Impact. The San Bernardino County Development Code Chapter 88.01 Plant Protection and Management identifies various native desert plants that require a permit from the County prior to removal. Certain native plant species occurring on the Project site are covered under this County regulation, such as Western Joshua trees, smoke trees and catclaw acacias. Western Joshua trees are a state protected species and would require an Incidental Take permit (ITP) issued by the California Department of Fish and Wildlife (CDFW) if western Joshua trees are impacted by future development.

Therefore, there will be no impact on the local policy or ordinance as the Project proposes a GPA and ZC on the subject property only and will not conflict with or change such policy and ordinance. As described in a) above, future development onsite that may impact protected plants would need to implement avoidance and/or mitigation measures including Tree or Plant Removal Permits per the County Development Code Chapter 88.01, and CDFW at the time that development is proposed.

- f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?*

No Impact. The Joshua Tree community, including the Project site, is not within a Natural Community Conservation Plan (NCCP) or Habitat Conservation Plan (HCP) that has jurisdiction over private lands. Therefore, the Project and any future development onsite will not conflict with the provisions of an adopted HCP, NCCP, or other approved local, regional or State HCP.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
V. CULTURAL RESOURCES - Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Disturb any human remains, including those outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: (Check if the project is located in the Cultural or Palaeontologic Resources overlays or cite results of cultural resource review).

Countywide Plan; Cultural Historical Resources Information System (CHRIS), South Central Coast Information Center, California State University, Fullerton; Submitted Project Materials; Historical/Archaeological Resources Survey Report Assessor's Parcel Number 0602-371-06 Joshua Tree, San Bernardino County, California, prepared by CRM TECH, April 9, 2021

- a) *Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?*

No Impact. The proposed GPA and ZC have no potential to impact historic resources, because the Project consists only of a map change, and no development will occur. However, future development proposed on the site, which will be subject to review under CEQA, could impact resources.

Ranchers and miners began to arrive in the Joshua Tree area in the late 1800s, but the modern-day community of Joshua Tree started to take form after the establishment of Desert Queen Ranch, which was founded in 1918 and is now known as Keys Ranch in the boundaries of the Joshua Tree National Park. Homesteaders began settling the area in the 1930s, concurrent with the establishment of the Joshua Tree National Monument. By 1952, the Joshua Tree community had grown almost to its present-day extent, although of lower densities. Today, the Joshua Tree community sees millions of visitors annually, but the year-round population was just under 7,000 as of 2018.

Between February and April 2021, CRM TECH performed a cultural resources study on the Project site to determine whether development on the site would cause a substantial adverse change to any "historical resources," as defined by CEQA, that may exist in or around the Project area. The study included a review of a recently completed proximal

historical/archaeological resources records search, a Native American Sacred Lands File search, historical background research, and an intensive-level field survey.

Due to facility closures and delays during the pandemic at the South Central Coastal Information Center (SCCIC), a records search for the Project site could not be obtained. Instead, the results of a previous records search focused on a property located a half-mile east of the Project area on the north side of Twentynine Palms Highway, were reviewed for information pertaining to the Project area. The prior records search was conducted on January 16 and February 26, 2019 by CRM TECH for previously identified cultural resources and existing cultural resources reports within a one-mile radius of that location. The records search results indicate that the Project area had not been surveyed for cultural resources as of 2019, and no cultural resources had been recorded within Project boundaries. Given the negative findings of the field survey (please see below) and the limited activity in the area surrounding the Project site, it is unlikely that a records search would identify any other resources in the area. In the Project vicinity, two roads outside but adjacent to the southern and eastern Project boundaries had been previously recorded as Sites 36- 010525 (a segment of now Twentynine Palms Highway) and 36-024673 (a segment of Sunset Road) in the California Historical Resources Inventory, respectively. Both roads at the Project location are essentially modern infrastructure elements that retain no historical characteristics to relate to the pre-modern era. Twenty-six other historical/archaeological resources which all dated to the historic period had been recorded farther away but within a half-mile radius of the Project area. Development within the Project site would not impact these historical resources.

The intensive-level field survey produced a negative finding for potential “historical resources,” and no buildings, structures, objects, sites, features, or artifacts of prehistoric or historical origin were encountered. Portions of the Project area show signs of past ground disturbance, especially along the drainages, dirt roads, and the adjacent roadways outside the property. There was much refuse observed onsite, which was primarily construction and landscaping waste, as well as a chunk of obsidian discarded amid landscaping debris that shows a worked surface. All of the items appear to be modern or recent in origin, and none of them are of any historical/archaeological interest.

In summary, no potential “historical resources” were previously recorded within the Project area, and none were found during the survey onsite. In addition, no notable cultural features were known to be present within the Project area throughout the historic period. Neither the Project consisting of a map change only (GPA and ZC) nor future development on the subject property would have any impact on historical resources.

- b) *Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

No Impact. The unincorporated community of Joshua Tree is on the southern edge of the Mojave Desert. Archaeologists have devised chronological frameworks for the region based on artifacts and site types that date back some 12,000 years. The most recent chronology consists of five periods. During the Lake Mojave (ca. 8000-5500 B.C.) sequence, small mobile groups of hunters and gatherers inhabited the Mojave Desert.

These groups continued to inhabit the region during the Pinto Period (ca. 5500-2500 B.C.), and relied more on ground foods, small and large game animals, and the collection of vegetal resources. Distinct cultural changes occurred during the Newberry Period (ca. 1500 B.C.-500 A.D.), when small residential groups moved between select localities, established a geographically expansive land-use pattern, and engaged in long-distance trade. The two ensuing periods, Saratoga (ca. 500-1200 A.D.) and Tecopa (ca. 1200-1770s A.D.), are characterized by seasonal group settlements near accessible food resources and the intensification of the use of plant foods, as evidenced by groundstone artifacts and the evolution of pottery.

Two Native American groups lived near the Project area in recent centuries, the Serrano and the Chemehuevi. The Serrano's homeland was centered in the nearby San Bernardino Mountains but also included lowlands along both flanks of the mountain range. The Chemehuevi traditionally occupied the Mojave Desert east to the Colorado River. The Serrano settled mostly near where flowing water emerged from the mountains, while the Chemehuevi, with fewer people spread over a much wider area, cultivated, gathered, and hunted in the open deserts, but were also known for their agricultural practices. Members of each tribe gathered at important base camps or villages for annual ceremonies and tribal interaction with neighboring groups.

While contact with Europeans may have occurred as early as 1771 or 1772, there was no direct European influence on Serrano and Chemehuevi lifeways until the mission system expanded to the edge of Serrano territory in the 1810s. By the early 20th century, the majority of Serrano and Chemehuevi population was incorporated into the reservation system. Today, most Serrano descendants are found on the San Manuel and the Morongo Indian Reservations, while the Chemehuevi are divided among the Chemehuevi, the Colorado River, and the Morongo Reservations.

On February 2, 2021, CRM TECH submitted a written request to the State of California Native American Heritage Commission (NAHC) for a records search in the commission's Sacred Lands File. NAHC responded in a letter dated February 17, 2021, that Sacred Lands File identified no Native American cultural resources in the Project vicinity. While the absence of specific information does not necessarily indicate the absence of such resources, NAHC recommended that local Native American groups be consulted for further information and provided a referral list of potential contacts. This referral list will assist the County as the lead agency in the ensuing government-to-government consultations under AB 52 and SB 18. CRM TECH also corresponded with the nearby Twentynine Palms Band of Mission Indians on February 2-8, 2021, to notify the tribe of the upcoming archaeological field survey and coordinate tribal participation. A cultural resources specialist from the tribe assisted during the field survey.

As mentioned above in a), the field survey did not identify any archaeological resources on the Project site. CRM TECH recommended no further cultural resources investigation for the Project site unless future development plans undergo such changes as to include areas not covered by this study. The Project proposes a map change only and will have no impact on archaeological resources. Impacts from future development onsite will be analyzed in the CEQA review and mitigation will be required where necessary. Typical mitigation for the Project site would be as follows: If buried cultural materials are

encountered during future earth-moving operations on the subject property, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

c) *Disturb any human remains, including those outside of formal cemeteries?*

No Impact. The Project proposes a map change only and will have no impact on disturbing human remains. Future development onsite will be subject to State Health and Safety Code Section 7050.5, which states that if human remains are encountered during site disturbance, all activity shall stop until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately and notify the Native American Heritage Commission (NAHC) if the remains are determined to be prehistoric. NAHC will determine and notify a Most Likely Descendant (MLD), who may inspect the site of the discovery with the landowner's permission within 48 hours of notification by the NAHC. Compliance with the requirements of state and local laws will ensure any potential impact to inadvertent discoveries of human remains due to future site development are reduced to less than significant levels.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
VI. ENERGY – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: Countywide Plan; Submitted Materials; County of San Bernardino Greenhouse Gas Reduction Plan Update, June 2021

- a) *Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*
- b) *Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

No Impact.

The Project proposes a general plan amendment (GPA) and zone change (ZC) on the 40-acre subject property and will not involve any development or energy consumption related to construction or operation. When future development is proposed onsite, its design and construction will be subject to the 2022 Building Energy Efficiency Standards (Energy Code, Title 24, Part 6), which serves to ensure the economical and wise use of energy resources during construction and operational phases.

Southern California Edison (SCE) provides electricity to the community of Joshua Tree, including the Project area. Currently, SCE delivers power to 15 million people in its 50,000-square-mile service area.¹ SCE continues to increase the share of renewable energy such as solar and wind power in its portfolio and runs a diverse portfolio of energy efficiency programs and services that partner with customers to save energy.²

Southern California Gas Company (SoCalGas) provides natural gas services to the community of Joshua Tree. SoCalGas currently serves 21.1 million consumers in more than 500 communities. SoCalGas offers various rebates, incentives and assistance programs for customers to improve energy efficiency and conserve energy.

As regional energy providers, SCE and SoCalGas are both committed to increasing efficiency and renewable energy generation and enforce relevant state energy

¹ <https://www.sce.com/about-us/who-we-are>, accessed 10/26/2023.

² Ibid.

standards. Implementation of the California Energy Code and voluntary energy efficiency and renewable energy programs will ensure that future development onsite is consistent with the goals laid out in the County of San Bernardino Greenhouse Gas Reduction Plan 2021 (GHGRP) update and that no wasteful, inefficient, or unnecessary consumption of energy resources will occur. The proposed GPA and ZC will not conflict with or obstruct a state or local plan for energy efficiency or renewable energy.

The County GHGRP Update was adopted by board of supervisors on September 21, 2021. The County's local GHG reduction strategy includes reduction goals and measures in different emission categories including energy and transportation. Specific measures include urban tree planting, solar installations, and education and outreach to increase energy efficiency in existing buildings, with an emphasis on incentive programs run by the State, SCE, and SoCalGas.

The proposed GPA and ZC will not interfere with evolving fuel efficiency standards nor result in wasteful, inefficient, or unnecessary consumption of transportation energy resources.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
VII. GEOLOGY AND SOILS - Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map Issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii. Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii. Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv. Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: (Check if project is located in the Geologic Hazards Overlay District): **Countywide Plan; Submitted Project Materials**

Countywide Plan; Submitted Project Materials

a) *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:*

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map Issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42

No Impact. The Joshua Tree community is located within a wedge-shaped fault block known as the “Mojave Block.” The Mojave Block is located at the junction of two geomorphic provinces: the Eastern Transverse Ranges Province, a region of low to moderately high mountains that include Joshua Tree National Park, Little San Bernardino Mountains, Pinto Mountains, and several ranges to the southeast; and the Mojave Desert Province, an arid region of alluvial fans, expansive desert plains, dry lakebeds and scattered mountain ranges. The Mojave Block is bounded by the Garlock Fault to the north, the San Andreas fault system to the west and southwest, and the southern Death Valley fault zone, Granite Mountains, and Packard Well faults to the east.

The Project proposes a GPA and ZC on the 40-acre subject property and does not propose any development. The Project will have no impact on geology and soils. The Project site is located outside and south of the Pinto Mountain Fault Zone according to the General Plan Geologic Hazard Overlays Map. No impact will occur on the Project site due to rupture of a known fault.

ii) Strong seismic ground shaking?

No Impact. The Joshua Tree community is in a tectonically active and structurally complex region. Certain areas in the community can be susceptible to a range of geologic hazards, including ground rupture, major ground shaking, slope instability, and collapsible and expansive soils. The Pinto Mountain Fault Zone traverses the community north of the Twentynine Palms Highway. The Project site is not located in the Geologic Hazards Overlay District according to the San Bernardino County Land Use Plan General Plan Geologic Hazard Overlays Map (Joshua Tree North FI22C).

The Project does not propose any development and will have no impact on ground shaking. The Project site is in the highly seismic Southern California region and within the influence of several active or potentially active fault systems. The Project site will be subject to significant ground shaking from nearby and regional faults such as the Pinto Mountain Fault, Eureka Peak Fault, Burnt Mountain Fault, and the San Andreas Fault System. Future development on the Project site will be subject to stringent building requirements including the most recent California Building Code regarding seismic safety design and specifications.

iii) Seismic-related ground failure, including liquefaction?

No Impact. The Project does not propose any development and will have no impact on liquefaction. Liquefaction generally occurs when three conditions are met simultaneously: liquefaction-susceptible soil, groundwater within a depth of 50 feet or less, and strong seismic shaking. The groundwater depth in the Project vicinity is over 100 feet, and risks associated with liquefaction and related hazards would be negligible.

iv) Landslides?

No Impact. The Project does not propose any development and will have no impact on landslides. The Project site is on the desert floor and not near any hills or mountains. There are no signs of slope instability in the form of landslides, rock falls, earthflows or slumps on or near the subject property. There would be no risks associated with slope instability on the Project site.

b) *Result in substantial soil erosion or the loss of topsoil?*

No Impact. The Project does not propose any development and will have no impact on soil erosion or loss of topsoil. Future development proposed on the site will be subject to dust control/PM₁₀ management and National Pollutant Discharge Elimination System (NPDES) standards imposed by the county, which will mitigate for potential soil erosion from wind or flooding hazards. The San Bernardino County Development Code Section 85.11.030 requires implementation of best management practices (BMPs) for all construction for erosion control. A Storm Water Pollution Prevention Plan (SWPPP) will also be required for ground disturbance of more than one acre. These standard requirements will ensure no significant impact occurs regarding soil erosion or loss of topsoil.

c) *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off site landslide, lateral spreading, subsidence, liquefaction or collapse?*

No Impact. The Project does not propose any development and will have no impact on unstable soil or geologic unit. Land subsidence can occur in valleys where extensive groundwater pumping exceeds groundwater recharge. There are no fissures or other surficial evidence of subsidence on or near the Project site. There would be low risks associated with subsidence. As discussed above in a), the Project site is not subject to landslides or liquefaction and related hazards including lateral spreading. Future development proposed onsite would need to undergo CEQA review, including a geotechnical assessment to address soil collapse. Site-specific mitigation measures such as proper excavation, re-compaction, and foundation design will be implemented as needed.

- d) *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

No Impact. The Project does not propose any development and will have no impact on expansive soil. The surface soil on the subject property appears to be disturbed and consists of sand and silt. Expansiveness is typically associated with clay content in soil. Future development proposed onsite would need to undergo CEQA review, including a geotechnical assessment to determine the presence of expansive soil and provide mitigation as necessary.

- e) *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

No Impact. The Project does not propose any development and will have no impact on the use of septic tanks. There is no sanitary sewer infrastructure in the Project area, and future development proposed on the subject property will need to install septic tanks. The soil suitability for septic tanks will be addressed during the CEQA review for future development, likely through percolation testing.

- f) *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

No Impact. The Project does not propose any development and will have no impact on paleontological resources. According to the San Bernardino County General Plan Update Paleontological Resources Technical Report, the flat areas in the East Desert Region of the county, which includes the Project area, consist of alluvial plains of low-to high-sensitivity Younger Alluvium (Q) overlying high-sensitivity Older Alluvium (Qoa). When future development is proposed onsite, a paleontological survey will likely be required before grading to determine the need for paleontological monitoring, consistent with the Countywide Plan Policy CR-2.3.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials; County of San Bernardino Greenhouse Gas Reduction Plan Update, June 2021; San Bernardino County Regional Greenhouse Gas Reduction Plan, March 2021

- a) *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*
- b) *Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?*

a), b) No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and will not generate any development or greenhouse gas emissions. The proposed GPA and ZC will not conflict with any state and local plan, policy and regulation aimed at reducing GHG emissions.

Greenhouse gases (GHG), including carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and fluorinated gases (hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride), are released into the atmosphere through natural and anthropogenic processes. The significant increase of GHG emissions post-industrialization is associated with climate change, and carbon dioxide is the primary GHG of most concern due to current and projected emission levels.

In 2006, the California legislature passed Assembly Bill (AB) 32, which set a goal to reduce state-wide GHG emissions to 1990 levels by 2020. In 2016, Senate Bill (SB) 32 expanded upon AB 32 and mandates a 40% reduction in GHG emissions from 1990 levels by 2030. The San Bernardino County Regional Greenhouse Gas Reduction Plan was developed in March 2021 in response to the state initiatives. The regional plan is a joint effort of the 25 Partnership Cities of San Bernardino County, led by the San Bernardino Council of Governments (SBCOG), and includes a GHG emissions inventory and an evaluation of reduction measures that could be adopted by each partnership jurisdiction. The 25 Partnership jurisdictions included 24 cities in the county and the County of San Bernardino which covers all unincorporated areas including the Joshua Tree community. According to the regional plan, the unincorporated San

Bernardino selected a goal to reduce its community GHG emissions to a level that is 40% below its 2020 GHG emissions level by 2030. The area will meet and exceed this goal through a combination of state (~80%) and local (~20%) efforts, and the majority of emissions reductions are in the building energy and on-road transportation sectors. Each partnership jurisdiction may develop its own customized and comprehensive climate action plan based on the jurisdiction reduction plans developed in the regional plan.

The GHGRP Update was adopted by the board of supervisors on September 21, 2021. The GHGRP Update set a target for the year 2030 to reduce emissions to 40 percent below 2007 levels. The GHGRP Update provides local reduction measures that aim at energy efficiency, water conservation, alternative transportation, solid waste reduction, and clean energy.

As discussed in Section VI, Energy, future development proposed onsite will be subject to the 2022 (2025, if development takes place after January 1, 2026) Building Energy Efficiency Standards (Energy Code, Title 24, Part 6), which serves to ensure energy efficiency during construction and operation, thereby reducing GHG emissions. Regional energy providers, SCE and SoCalGas also run voluntary energy efficiency and renewable energy programs and enforce relevant state energy standards which help reduce GHG emissions. Implementation of the California Energy Code and voluntary utility programs will ensure that future development onsite is consistent with the GHG reduction goals set forth in the County GHGRP Update. When future development is proposed on the subject property, the County will undertake CEQA review and assess potential impacts on greenhouse gas emissions with regards to GHG thresholds set by MDAQMD.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials; California Department of Forestry and Fire Protection's Fire and Resource Assessment Program (FRAP); Phase I Environmental Site Assessment Report 37.57-Acre Vacant Parcel Twentynine Palms Highway and Sunset Road Joshua Tree, San Bernardino County, California, prepared by Alta Environmental on May 25, 2021

- a) *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*
- b) *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*
- c) *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

a)-c) No Impact. The Project proposes a GPA and ZC on the subject property and will have no impact on hazards or hazardous materials. The GPA and ZC would only change the acreage of residential/commercial designations on-site, but would not change the type or density of development allowed onsite by the Countywide Plan and Development Code.

The analysis provided in this section is supported by the Phase I Environmental Site Assessment (ESA) Report prepared by Alta Environmental on May 25, 2021 (see Appendix C).

The Project site has been undeveloped as early as 1948. Small amounts of wind-blown trash or litter were observed throughout the site and along the site perimeter. Based on the nature of these wastes, they are not considered to represent a recognized environmental condition (REC). No evidence of a Controlled REC, historic REC, REC, or VEC in connection with the site was identified during the Phase I ESA. No further assessment is recommended for the subject property.

Future development onsite will be required to assess potential impacts as part of the CEQA process, but it would be unlikely to have significant impacts since residential and commercial development typically do not involve significant use, storage or transport of hazardous materials.

The closest school to the Project site is the Joshua Tree Preschool, located approximately 0.31 miles to the southeast. There is no existing or proposed school within ¼ miles of the Project site, and no impact will occur.

- d) *Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

No Impact. According to the Phase I ESA for the Project site, the site is not included on any list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. No impact will occur.

- e) *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

No Impact. The Project proposes a map change only and no development. The Project will not result in more people working or residing in the area.

The nearest airport to the Project site is the Yucca Valley Airport, located approximately 5.2 miles to the southwest. The Project site is located well outside the noise contour of Yucca Valley Airport according to its Airport Comprehensive Land Use Plan (1992). The Project site is located within the low-altitude/high speed military airspace (Airport Safety Review Area 4 [AR4]). When future development is proposed onsite, an Avigation Easement shall be granted to the appropriate military agency and recorded before the issuance of a building permit for those uses established within an AR4 per the County Development Code Chapter 82.09.

Compliance with the standard requirements and CEQA review will ensure that no significant impact occurs regarding safety hazard or excessive noise for people residing or working in the Project area.

- f) *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

No Impact. The proposed GPA and ZC on the Project site will not impair implementation of or physically interfere with any adopted emergency response plan or emergency evacuation plan. When future development is proposed on the Project site, adequate on-site access for emergency vehicles would be verified by the Fire Department during the County's plan review process. During construction, the contractor would be required to maintain adequate emergency access for emergency vehicles as required by the County.

- g) *Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

No Impact. As discussed in detail in Section XX, Wildfire, the Project site is located in a local responsibility area and not in or near any fire hazard severity zones according to the FRAP maps by CalFire. The Project area is on the desert floor, not near forested areas or any significant vegetation. No impact will occur regarding wildland fires on the Project site.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
X. HYDROLOGY AND WATER QUALITY - Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. result in substantial erosion or siltation on- or off-site;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or offsite;	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of runoff; or	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv. impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials; 2020 Urban Water Management Plan for Joshua Basin Water District, September 2022; Joshua Basin Water District Wastewater Treatment Strategy, June 2009; Joshua Tree Creek San Bernardino County, CA Letter of Map Revision January 2021, prepared by NV5 and approval documents by Federal Emergency Management Agency, March 21, 2023

- a) *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?*
- b) *Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*
- e) *Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?*

a), b), e) No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and does not propose any development. The Project will have no impact on surface or ground water quality, nor violate any water quality standards or wastewater discharge requirements. The proposed map change onsite will have no impact on groundwater supplies or recharge and will not impede sustainable groundwater management, nor conflict with a water quality control plan or sustainable groundwater management plan.

Joshua Basin Water District (JBWD) provides domestic water and wastewater treatment services in the Joshua Tree community. The District's primary water source is groundwater from the Copper Mountain Valley and Joshua Tree subbasins that contain over 600,000 acre-feet of water. JBWD manages the Joshua Tree and Copper Mountain groundwater subbasins under its 1996 Groundwater Management Plan (GWMP). Neither of the subbasins are adjudicated and both are rated as very low priority basins under the Sustainable Groundwater Management Act. JBWD's management activities include water conservation measures, groundwater monitoring, water export prevention, groundwater contamination prevention/response, a replenishment assessment, and continued coordination with regional partners including the Mojave Water Agency.

In 2014, JBWD began receiving State Water Project (SWP) water from Mojave Water Agency, averaging 600 acre-feet per year. JBWD's 2020 Urban Water Management Plan (UWMP) indicates that adequate water supplies are available to meet customer demands through 2045 during average, single-dry, and multiple-dry years. While during dry years the groundwater basin will continue to be "overdrafted" to meet the supplies due to the lack of imported supplies to recharge the basin, the planned imported SWP supply will lessen and offset the overdraft as much as possible.

JBWD's wastewater function is currently limited to the operation of wastewater package treatment plants and planning and engineering related to regional wastewater service. In 2009, JBWD adopted a Wastewater Treatment Strategy to plan for a long-term and regional approach to protecting local groundwater. The Strategy requires new development with more than 15 equivalent dwelling units within the wastewater zone (approximately 35 square miles along the Twentynine Palms Highway corridor) to install package wastewater treatment plants that will be owned and operated by the District. Current development trend in the JBWD service area does not justify economical use of a central wastewater treatment plant at least in the near future.

When future development is proposed on the Project site, it would be subject to the County's NPDES permit which requires a Stormwater Pollution Prevention Plan (SWPPP) and implementation of Best Management Practices (BMPs) to prevent project-related pollutants from impacting surface waters. The County and JBWD implement all water quality standards and waste discharge requirements to prevent contamination of water sources during construction and operation. Future development on the Project site will likely require septic tanks or package treatment plants (for over 15 equivalent dwelling units), which will be monitored and regulated by JBWD and the RWQCB to ensure they do not pollute the groundwater basin.

As part of the CEQA review for future development onsite, water demand will be analyzed in the context of JBWD's 2020 UWMP. The 2020 UWMP indicated adequate water supplies to serve projected growth in JBWD's service area through 2045. While the proposed GPA and ZC would change the acreage of the residential and commercial designations onsite, it would not change the total area, type or density of development allowed onsite by the existing land use and zoning designations. Therefore, future development with the Project approval is expected to be in general conformance with projections in the UWMP.

- c) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:*
- i. Result in substantial erosion or siltation on- or off-site;*
 - ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or offsite;*
 - iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of runoff; or*
 - iv. Impede or redirect flood flows?*
- d) *In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

c), d) No Impact. The Project proposes a map change on the subject property only and does not involve any construction or development. There will be no impact on the existing drainage pattern of the site or area, or risk of pollutant release due to Project inundation. The Project site is inland and not near any large water body; therefore, the site is not subject to tsunami or seiche hazards.

In conjunction with reviewing the proposed GPA and ZC, the County acknowledged a LOMR (Appendix D) approved by FEMA in August 2023 that included floodway and floodplain revisions in the Project area. The LOMR was prepared using new mapping and modeling tools and updated topographic data that reflect alterations of Joshua Tree Creek in the Project area due to surrounding development. Before the LOMR, as shown in the previous FEMA Flood Insurance Rate Map (FIRM) No.06071C8140J (effective date of September 2, 2016), the area designated as regulatory floodway was located on the southern portions of the site (see 'Effective Floodway' in Exhibit 6). Comparing Exhibits 4 to 6, the area for potential commercial development outside the designated

floodway before the LOMR was very limited in the southeast corner of the site. The LOMR confirmed that the creek had migrated north approximately 460 feet and now runs diagonally through the site (Exhibit 7). Within the Project site, the regulatory floodway moved up to a diagonal alignment (southwest to northeast) in the center of the site, which increases the developable area on the southeast side of the site. Therefore, the LOMR supports the proposed GPA and ZC, which would expand the commercial land use category and zoning district to match the general developable area on the southeast side of the site, allowing more space for congruent planning and development.

Under the current FEMA FIRM No.06071C8140J (Exhibit 7), within the Project site, areas designated as Zone X include the northwestern portion of the site (Area of Minimal Flood Hazard), a small area in the southeast corner (Area with Reduced Flood Risk due to Levee), and a thin strip north of the floodway (0.2 Percent Annual Chance Flood Hazard). The remaining is designated as Zone AE, including the creek in the diagonal (Regulatory Floodway), a small portion on the north side of the floodway and the majority of the southeastern portion (Special Flood Hazard Area with Base Flood Elevation). When future development is proposed onsite, potential flooding risk and related impacts will be analyzed during the CEQA review, and mitigation measures will be implemented where necessary. A common strategy for new construction in the 100-year floodplain (Special Flood Hazard Area with Base Flood Elevation) is to raise the foundation to provide flood-resistant design. Future development on the Project site will be subject to County requirements, including NPDES standards, which require the preparation of water quality management plans, hydrology studies and SWPPP with BMPs. Compliance with these standard requirements will ensure compliance with local and federal standards and prevent any significant impact regarding erosion/siltation, increased runoff, flood flows and pollutant release.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XI. LAND USE AND PLANNING - Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

SUBSTANTIATION:
Countywide Plan; Submitted Project Materials

a) *Physically divide an established community?*

No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and does not propose any development. The Project site is currently vacant and undeveloped, surrounded by public roadways on the east and south, and similar vacant land and two apartment complexes on the north and west. The two apartment complexes on the west and north of the Project site operate independently and will not be physically divided by future development on the Project site. No impact will occur.

b) *Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

Less Than Significant Impact. The Project site is in the unincorporated community of Joshua Tree and under the jurisdiction of San Bernardino County for land use and planning. The Countywide Plan designates land use categories, and the County Development Code designates zoning districts. The Land Use Element in the Countywide Plan includes principles such as:

- *When growth occurs, it should do so in a manner that is fiscally sustainable and context-sensitive.*
- *New development should be focused in areas with low risks from natural and man-made hazards, and with fewer impacts on the natural environment.*

The Project site occupies 40 gross acres of undeveloped land in the unincorporated community of Joshua Tree in San Bernardino County. The Project site is currently dual-zoned for Joshua Tree/Multiple Residential (JT/RM) and Joshua Tree/General Commercial-Sign Control Primary (JT/CG-SCp), for 33 and 7 acres, respectively. There are currently two land use categories within the site according to the Countywide Plan, Medium Density Residential 5-20 du/ac (MDR) and Commercial (C). The boundary

between the land use categories is the same as that between the two zoning districts. Under existing designations (Exhibit 4 and 5), the southeast portion (7 acres) is designated for commercial development, and the remainder of the site (33 acres) is designated for residential development.

The proposed GPA and ZC would adjust the boundary between the commercial and residential designations within the Project site to be coterminous with the location of Joshua Tree Creek, and result in an increase in area under the Commercial land use category and JT/CG-SCp zoning district from 7 acres to 16 acres and a decrease in the area under the MDR land use category and JT/RM zoning from 33 acres to 24 acres on the site. While the Project would change the acreage of the residential and commercial designations onsite, it would not change the total area, type or density of development allowed onsite by the Countywide Plan and Development Code.

As shown in Table 3, under existing land use designations, full buildout of the Project site would result in a maximum of 660 dwelling units and 152,460 square feet of commercial development. With the proposed GPA and ZC, full buildout of the Project site would result in a maximum of 480 dwelling units and 348,480 square feet of commercial development. While the Project could result in a reduction of 180 units at full buildout, these 180 units would be in the southeast portion of the site which is designated as Zone AE (Special Flood Hazard Area with Base Flood Elevation, commonly referred to as 100-year floodplain) (Exhibit 4, 5, & 7). The Countywide Plan Policy HZ-1.2 New development in environmental hazard areas requires all new development to be located outside of the environmental hazard areas including the 100-year flood zone. Policy HZ-1.2 also states that "For any lot or parcel that does not have sufficient buildable area outside of such hazard areas, we require adequate mitigation, including designs that allow occupants to shelter in place and to have sufficient time to evacuate during times of extreme weather and natural disasters." In the subject property's case, future residents in the 180 units would be subject to higher housing costs due to the required design and mitigation and still be subject to higher flood risk. Given the circumstances, it is reasonable to assume the 180 'lost' units in the 100-year floodplain onsite could be replaced elsewhere in the community with lower flood risk and housing costs.

Table 3. Existing and Proposed Full Buildout of the Project Site		
Land Use Category / Zoning District	Medium Density Residential 5-20 du/ac (MDR) / Joshua Tree/Multiple Residential (JT/RM)	Commercial (C) / Joshua Tree/General Commercial-Sign Control Primary (JT/CG-SCp)
Existing Full Buildout	33 acres at 5-20 units per acre = 165-660 units	7 acres at 0.5 floor-area ratio = 152,460 square feet
Proposed Full Buildout	24 acres at 5-20 units per acre = 120-480 units	16 acres at 0.5 floor-area ratio = 348,480 square feet

In addition, as discussed in detail in Section X above, the proposed GPA and ZC would be supported by the FEMA-approved LOMR, and provides a buffer and separation between future residential and commercial development. The Project would expand the commercial designation onsite to largely match the developable area on the southeast side of the site, in turn allowing more space for congruent planning and development onsite. As discussed throughout this initial study, the Project would achieve the same goal of avoiding or mitigating any environmental effect as the existing designations onsite, and thus would not cause a significant impact due to a conflict with the Countywide Plan and Development Code.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XII. MINERAL RESOURCES - Would the project:				
a) Result in the loss of availability of a known mineral resource that will be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: (Check if project is located within the Mineral Resource Zone Overlay):

Countywide Plan; Submitted Project Materials

- a) Result in the loss of availability of a known mineral resource that will be of value to the region and the residents of the state?
- b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

a), b) No Impact. The Project site is located in the unincorporated community of Joshua Tree. The County prioritizes the conservation of land area with mineral resources in areas classified as Mineral Resource Zone (MRZ) 2a, 2b, or 3a (Countywide Plan Policy NR- 6.1). The Countywide Plan Policy Map NR-4 Mineral Resource Zones maps mineral resource zones (Class 2 - known or highly likely location and Class 3 - moderate potential or possible location) for Contact Metasomatic (Skarns), Industrial Minerals, Hydrothermal Deposits, and Aggregate Resources. The Joshua Tree community is not located in any study area in the California Geological Survey Information Warehouse: Mineral Land Classification by the Department of Conservation. According to the Countywide Plan Policy Map NR-4 Mineral Resource Zones, there are no Class 2 or 3 mineral resource zones in Joshua Tree, including the Project site. Therefore, no impact will occur regarding the loss of availability of a known mineral resource.

The web version of the Countywide Plan Policy Map NR-4 also shows county mines, processing plants, current and past producers. There are no mines in the Project area, nor any land designated for mining uses. The Project will have no impact on any mineral resource recovery site.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XIII. NOISE - Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION: (Check if the project is located in the Noise Hazard Overlay District or is subject to severe noise levels according to the General Plan Noise Element):

Countywide Plan; Submitted Project Materials

- a) *Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards*
- b) *Generation of excessive groundborne vibration or groundborne noise levels?*

a), b) No Impact. The Project site is in a suburban area in the Joshua Tree community, with primary noise sources including traffic on surrounding roadways, mechanical equipment such as heating/ventilation/air conditioning (HVAC) units, trash pickup trucks, and parking lot activity. According to the Countywide Plan Policy Map HZ-7 & HZ-8 Existing & Future Noise Contours, portions on the south and east side of the subject property fall within the 60, 65, and 70 CNEL noise contours of Twentynine Palms Highway and Sunset Road under existing and future conditions.

The Project proposes a GPA and ZC on the 40-acre subject property and does not propose any development. The Project will have no impact on noise. When future development is proposed onsite, noise impacts will be analyzed during the CEQA review and building permit processes. The County will require the preparation of site-specific noise studies to assess impacts from roadway noise, as appropriate. Should noise levels

on the Project site require mitigation, there are a variety of means such as noise attenuation walls, setback from roadways, and landscape buffers. It should be noted that the GPA and ZC increase the distance from the primary noise source, Twentynine Palms Highway, for most of the residentially designated land, thereby providing a buffer for future sensitive receptors who would occupy the residential units in the northern part of the site.

Future development on the Project site would include construction and create temporary noise sources. The County's Development Code imposes noise and vibration standards and limits construction hours to the less sensitive day time hours (Section 83.01.080 and 83.01.090). Future development onsite will be reviewed under CEQA to determine whether their construction impacts will impact neighboring development.

- c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the project area to excessive noise levels?*

No Impact. The Project proposes a map change only and no development on the subject property. The Project will not result in more people working or residing in the area. The nearest airport to the Project site is the Yucca Valley Airport, located approximately 5.2 miles to the southwest. The Project site is located well outside the noise contour of Yucca Valley Airport according to its Airport Comprehensive Land Use Plan (1992).

The Project site is located within the low-altitude/high speed military airspace (Airport Safety Review Area 4 [AR4]). When future development is proposed onsite, an Avigation Easement shall be granted to the appropriate military agency and recorded before the issuance of a building permit for those uses established within an AR4 per the County Development Code Chapter 82.09. Compliance with the standard requirements and CEQA review will ensure that no significant impact would occur regarding excessive noise exposure for people residing or working in the Project area.

Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XIV. POPULATION AND HOUSING - Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials; United States Census Bureau.

- a) *Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

No Impact. The U.S. Census Bureau publishes data on the Joshua Tree Census Designated Place (CDP), which includes the core populated area (southeastern portion) of the Joshua Tree Community Planning Area on the Countywide Plan Policy Map LU-1 Land Use Map. According to the Decennial Census data, in 2020, the population in Joshua Tree CDP was 6,489 and there were 3,745 housing units.

The Project proposes a GPA and ZC on the 40-acre subject property and does not propose any development. The proposed GPA and ZC would reduce the area designated for residential development and increase the area designated for commercial development onsite. Therefore, the population at full buildout would be smaller compared to that under the existing land use designations. The Project would not induce unplanned population growth either directly or indirectly. No impact would occur.

- b) *Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

No Impact. The Project site is vacant and undeveloped. The Project proposes no development and would not displace any existing people or housing. No impact would occur.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XV. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire Protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Police Protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Other Public Facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials

a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*

- Fire Protection?*
- Police Protection?*
- Schools?*
- Parks?*
- Other Public Facilities?*

No Impact. The Project proposes a GPA and ZC on the subject property and does not propose any development. The Project will have no impact on public services. Future development proposed on the Project site will be assessed under CEQA, to determine whether it will impact public services. The area surrounding the Project site is partially developed and in an area that already receives public services.

San Bernardino County Fire Protection District provides fire protection, first response, emergency medical services, and natural disaster preparedness services in the Joshua Tree community. San Bernardino County Fire Station 36 is the nearest fire station to the Project site, located approximately 0.32 miles to the southeast. The Project site is not located within a State Responsible Area or Very High Fire Hazard Severity Zone (VHFHSZ) mapped by the California Department of Forestry and Fire Protection (CalFire).

San Bernardino County Sheriff's Department provides police protection in the Joshua Tree community. Morongo Basin Patrol Station is the nearest police station to the Project site, located approximately 2.43 miles to the east.

The Morongo Unified School District (MUSD) serves the Joshua Tree community and has eleven elementary schools, two middle schools, two comprehensive high schools, one continuation high schools, two state preschool programs, and a special education preschool program.

Future development will be required to meet County design standards for adequate access by emergency vehicles and comply with all applicable fire code and ordinance requirements for construction and site access. Future development projects will be required to pay development impact fees, including school impact fees, which would support the provision of public services and facilities.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility will occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials

- a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility will occur or be accelerated?*
- b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

a), b) No Impact. The Joshua Tree Recreation and Parks District (County Service Area 20 or CSA20) oversees four parks, three ball fields, one recreation center building, a water playground, a skateboard park, and a 12,000 sq. ft. community center in the Joshua Tree community. The community is also the gateway to Joshua Tree National Park, which offers ample opportunities for hiking, camping, photography, rock climbing, and sightseeing in the 800,000-acre desert wilderness.

The Project proposes a GPA and ZC on the 40-acre subject property and involves no development. There will be no impact on recreational facilities. Future development may contribute to CSA20 through payment of fees, special taxes or assessments, which would cover the additional costs associated with providing parks and recreational services. These issues will be reviewed under CEQA as future development projects are proposed.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3 subdivision (b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials

- a) *Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and involves no development. The Project will have no impact on transportation. Future development proposed on the Project site will be required to address its traffic impacts in the CEQA review process.

Countywide Plan Mobility Element Policy TM-1.1 supports a Level of Service (LOS) of C in the North and East Mountain Regions, in which the Project site is located. The development which could occur under the Project would generate additional commercial trips, but reduced residential trips. Since the type and density of development is not known at this time, it would be entirely speculative to predict trip generation for either the residential or commercial portions of the Project site. A Transportation Impact Analysis (TIA) will be required per the County Transportation Impact Study Guidelines if the development would generate a net increase of 100 or more peak hour vehicle trips (without pass-by reductions). The TIA will include mitigation measures where necessary, including fair share contributions.

There are existing bike lanes on Highway 62, immediately east of the Project site. When development occurs, it will be required to extend these bike lanes along the Project frontage, consistent with County requirements.

Morongo Basin Transit provides bus service to the community of Joshua Tree. Existing service on route #1 includes a stop at Park Boulevard, east of the Project site. As the community develops, including the Project site, additional stops will be provided to support ridership.

- b) *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3 subdivision (b)?*

No Impact. Under SB 743, CEQA Guidelines Section 15064.3 was amended December 2018, stating that vehicle miles traveled (VMT) is the most appropriate measure of transportation impacts. A lead agency may use models or other methods to analyze a project's VMT quantitatively or qualitatively. To comply with CEQA, the County of San Bernardino adopted analytical procedures, screening tools, and impact thresholds for VMT, which are documented in the San Bernardino County Transportation Impact Study Guidelines (July 9, 2019).

The proposed GPA and ZC will have no impact on VMT. The development of residential and commercial projects in the future will require a VMT analysis. At the time that a development is proposed, its impact on regional VMT will be analyzed, to assure that if any significant VMT impacts were to occur, they could be reduced to less than significant levels. It should be noted, however, that the adjacency of residential and commercial land uses, as currently existing and proposed for the Project site, tends to reduce VMT because of the synergistic relationship between where people reside and where they work and shop.

- c) *Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*
- d) *Result in inadequate emergency access?*

c), d) No Impact. The GPA and ZC will only result in a map change, and no development will occur. Future development will be subject to County standards regarding roadway improvements, parking, and emergency access, either through CEQA or through conditions of approval.

The Project site is in the established street system of the community and region, and future development is not expected to interfere with the system.

Future development on the Project site will be required to meet County design standards for adequate access by emergency vehicles and comply with all applicable fire code and ordinance requirements for geometric design and site access.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XVIII. TRIBAL CULTURAL RESOURCES				
a) Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Cultural Historical Resources Information System (CHRIS), South Central Coast Information Center, California State University, Fullerton; Submitted Project Materials; Historical/Archaeological Resources Survey Report Assessor’s Parcel Number 0602-371-06 Joshua Tree, San Bernardino County, California, prepared by CRM TECH, April 9, 2021

Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- a)
 - i. *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or*
 - ii. *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

i), ii) No Impact. As discussed in Section V Cultural Resources, the Mojave Desert, including the Joshua Tree community, was home to the Serrano and the Chemehuevi Native Americans for centuries. Today, most Serrano descendants are affiliated with the San Manuel and the Morongo Indian Reservations, while the Chemehuevi are divided among the Chemehuevi, the Colorado River, and the Morongo Reservations.

As described in detail in Section V above, between February and April 2021, CRM TECH submitted a written request to the State of California Native American Heritage Commission (NAHC) for a records search in the commission's Sacred Lands File. NAHC responded that Sacred Lands File identified no Native American cultural resources in the Project vicinity. While the absence of specific information does not necessarily indicate the absence of such resources, NAHC recommended that local Native American groups be consulted for further information and provided a referral list of potential contacts. CRM TECH also corresponded with the nearby Twentynine Palms Band of Mission Indians to notify the tribe of the upcoming archaeological field survey and coordinate tribal participation. A cultural resources specialist from the tribe assisted during the field survey.

The County is conducting formal government-to-government consultation with tribes under AB 52 and SB 18. As a result of that consultation effort, the County received one email from the Yuhaaviatam of San Manuel Nation, requesting a copy of the cultural resources study, which was provided. Consultation is ongoing, and any requests for mitigation will be added to this initial study or as conditions of approval. However, it is important to note, as described in Section V., the proposed Project will not include any ground disturbance, and future development will be subject to future CEQA review, and mitigation as needed for project-specific impacts.

Therefore, no impacts are identified or anticipated and no mitigation measures are required at this time.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XIX. UTILITIES AND SERVICE SYSTEMS - Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials

- a) *Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*
- b) *Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years?*

a), b) No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and involves no development. The Project will have no impact on utilities. Future

development proposed on the Project site will consider utilities as part of the CEQA and land use application process. The provision of domestic water and wastewater treatment services has been analyzed by the JBWD as part of their long-range planning, accounting for local population growth and development trends in the Project area.

As discussed in Section X, Hydrology and Water Quality, future development on the Project site will be required to meet County requirements on stormwater management and avoid adverse impacts on the public drainage system.

The energy and telecommunication utility providers update their plans to serve future demands in their jurisdictions, which will ensure adequate system capacity to meet the growing needs of the Joshua Tree community.

Because JBWD has sufficient capacity, or can expand services to accommodate development and impacts will be assessed for individual development project on utility services, no significant impact is expected.

- c) *Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?*

No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and involves no development. The Project will have no impact on wastewater. As there is no sewer system in the Project area, future development onsite will need to install septic tanks or package treatment plants depending on the size of the development. The impacts associated with those systems will be assessed when development is known and can be quantified.

- d) *Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*
- e) *Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

d), e) No Impact. The Project proposes a GPA and ZC on the 40-acre subject property and involves no development. The Project will have no impact on solid waste disposal. Future residential and commercial customers on the Project site will be assessed a per unit/account fee for solid waste service provided by Burrtec. The transfer stations and landfills in the region currently have sufficient capacity to accommodate future development. Future development on the Project site will be required to analyze demand and capacity for solid waste disposal as part of the CEQA process.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XX. WILDFIRE: If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water resources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SUBSTANTIATION:

Countywide Plan; Submitted Project Materials; California Department of Forestry and Fire Protection's Fire and Resource Assessment Program (FRAP)

- a) *Substantially impair an adopted emergency response plan or emergency evacuation plan?*
- b) *Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from wildfire or the uncontrolled spread of a wildfire?*
- c) *Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water resources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

- d) *Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

a)-d) No Impact. The proposed GPA and ZC will have no impact on wildfire hazards, as no development is proposed.

The California Department of Forestry and Fire Protection (CalFire) has mapped areas of significant fire hazards in the state through its Fire and Resource Assessment Program (FRAP). FRAP maps classify lands within State Responsibility Areas (SRA) into different Fire Hazard Severity Zones (FHSZ), using a hazard scoring system for factors such as existing and potential fuel (natural vegetation), fire history, terrain, and typical fire weather for the area where urban conflagration could result in catastrophic losses. The subject property is designated as a local responsibility area, not located in or near an SRA or area designated as a very high fire hazard severity zone (VHFHSZ).

According to the FRAP maps by CalFire, SRA in the Joshua Tree community is limited to the southern portions near Joshua Tree National Park. There is no VHFHSZ in the urban area. The nearest VHFHSZ is located approximately 2.7 miles to the southwest of the Project site. The nearest SRA is located approximately one mile to the south, which is classified as a moderate fire hazard severity zone. The Project area is on the desert floor, not near forested areas or any significant vegetation. The Project area is not at high risk for wildfire, and thus also not at risk for spread of wildfire, or for slope instability, flooding or landslides. Therefore, there is no need for installation or maintenance of infrastructure that could exacerbate fire risk. Given the distance from the nearest SRA and VHFHSZ and area conditions, future development resulting from the Project will have no impact associated with wildfires.

Therefore, no impacts are identified or anticipated and no mitigation measures are required.

<i>Issues</i>	<i>Potentially Significant Impact</i>	<i>Less than Significant with Mitigation Incorporated</i>	<i>Less than Significant</i>	<i>No Impact</i>
XXI. MANDATORY FINDINGS OF SIGNIFICANCE:				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects, which would cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

a) *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

No Impact. As described above, the Project proposes a map change only and does not involve any development or construction. There will be no impact on biological and cultural resources.

b) *Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

Less Than Significant Impact. The Project proposes a GPA and ZC that applies to the subject property only. While the GPA and ZC would reduce development potential for residential units and increase the potential area for commercial development onsite, it would not change the type and intensity of development allowed onsite under the General Plan and zoning designations. The Project would not allow residential/commercial development beyond areas designated for such development in the Countywide Plan and Development Code. All potential impacts have been thoroughly evaluated and have been deemed to be neither individually significant nor cumulatively considerable in terms of any adverse effects upon the region, the local community or its inhabitants.

- c) *Does the project have environmental effects, which would cause substantial adverse effects on human beings, either directly or indirectly?*

Less Than Significant Impact. As described throughout this initial study, the Project will have no adverse environmental effects, either directly or indirectly, on human beings. The Project proposes a GPA and ZC on the subject property, which will facilitate development on the site that is consistent with what is envisioned in the Countywide Plan. While the Project would reduce the maximum allowed residential units on the subject property, such reduction is negligible on the community and regional scale, especially considering the designated floodway and floodplains onsite that severely limit housing development potential. Any direct/indirect impact from the Project on human beings would be less than significant.

Therefore, no significant adverse impacts are identified or anticipated and no mitigation measures are required.

XXII. MITIGATION MEASURES

None.

SELF MONITORING MITIGATION MEASURES: (Compliance monitoring will be verified by existing procedures for condition compliance)

Executive Summary

Circle Mountain Biological Consultants, Inc. was contacted by NV5 on behalf of Eric Kleinbub (Proponent) to perform a focused survey for Agassiz's desert tortoise and Joshua trees, habitat assessments for burrowing owl, and a general biological resource assessment on a 40-acre± site. APN 0604-371-06 is a 40-acre± parcel located in the unincorporated community of Joshua Tree, northwest of the junction of Highway 62 (southern boundary) and Sunset Road (eastern boundary), San Bernardino County, California. The legal description for the subject property is Township 1 North, Range 6 East, a portion of the Southeast ¼ of the Southeast ¼ of Section 26, S.B.B.&M.

For a total of 8.0 hours, between 1100 and 1600 hours on 5 February 2021 and 0945 and 1245 on 6 February 2021, Ed LaRue of CMBC surveyed the site and adjacent areas as described herein. This entailed a survey of 40 transects, spaced at 10-meter intervals and oriented in a north-south direction throughout the 40-acre± parcel. As depicted in Figure 2, peripheral transects were surveyed for detection of burrowing owls at 30-meter intervals to the west and north in contiguous, undeveloped areas.

Based on DeLorme Topo USA® 10.0 software, elevations on the subject property range from approximately 2,760 feet (841 meters) at the southwest corner down to 2,720 feet (829 meters) at the northeast corner. Terrain is relatively flat with a slight northeastern aspect. Soils are mostly sandy with scattered rock. Joshua Tree Creek, flowing from southwest-to-northeast through the site is a USGS-designated blueline stream. The 60 plant species identified during the survey are listed in Appendix A. The 2 reptile, 16 bird, and 8 mammal species identified during the survey are listed in Appendix B.

Based on the absence of tortoise sign onsite and in adjacent areas, and available information reviewed for this habitat assessment, CMBC concludes that tortoises are absent from the subject property. There is a limited likelihood that one could enter the site from the north prior to ground disturbance. As such, no impacts are anticipated and no mitigation measures are recommended.

Based on the field survey and habitat assessment, CMBC concludes that none of the following special status species reported from the region will be adversely affected by site development: Cooper's hawk, northern harrier, prairie falcon, or burrowing owl. As such, no adverse impacts have been identified and no mitigation measures are recommended. Those species either identified during the current survey or for which suitable habitats are present include desert unicorn-plant, Little San Bernardino Mountains linanthus, loggerhead shrike, and LeConte's thrasher.

Joshua tree (112 trees), catclaw acacia (11 plants), smoke tree (7 trees), and unknown numbers of Mohave yucca, silver cholla, pencil cholla, hedgehog cactus, and beavertail cactus are species found on-site that may be subject to pertinent development codes.

**Focused Survey for Agassiz's Desert Tortoise,
Habitat Assessments for Burrowing Owl and Joshua Tree, and
General Biological Resource Assessment for a
40-acre± Site (APN 0604-371-06) in the Community of Joshua Tree,
San Bernardino County, California**

1.0. Introduction

1.1. Purpose and Need for Study. Circle Mountain Biological Consultants, Inc. (CMBC) was contacted by Bill Warner on behalf of Eric Kleinbub (Proponent) to perform a focused survey for Agassiz's desert tortoise (*Gopherus agassizii*) and Joshua trees (*Yucca brevifolia*), habitat assessments for burrowing owl (*Athene cunicularia*), and a general biological resource assessment on a 40-acre± site located in San Bernardino County, California (see Figures 1 and 2). Given the location of the site in an unincorporated portion of the county, this report has been prepared, in part, according to County of San Bernardino's *Report Protocol for Biological Assessment Reports* (County of San Bernardino 2006).

As the California Environmental Quality Act (CEQA) Lead Agency, the County of San Bernardino, Public and Support Services Group, Land Use Services Department, Advance Planning Division (County) is required to complete an initial study to determine if site development will result in any adverse impacts to rare biological resources. The information may also be useful to federal and State regulatory agencies, including U.S. Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW), respectively, if the Lead Agency asks them to assess impacts associated with proposed development. Results of CMBC's focused tortoise and Joshua tree survey, burrowing owl habitat assessment, and general biological resource assessment are intended to provide sufficient baseline information to these agencies to determine if significant impacts will occur and to identify mitigation measures, if any, to offset those impacts.

1.2. Project Description. APN 0604-371-06 is a 40-acre± parcel located in the unincorporated community of Joshua Tree, northwest of the junction of Highway 62 (southern boundary) and Sunset Road (eastern boundary), San Bernardino County, California. The legal description for the subject property is Township 1 North, Range 6 East, a portion of the Southeast ¼ of the Southeast ¼ of Section 26, S.B.B.&M.

2.0. Methods

2.1. Literature Review. CMBC consulted materials included in our library to determine the nearest tortoise locations and other special status plant and animal species that have been reported from the vicinity of the subject property. Of particular relevance given their proximity to the subject property are 13 focused tortoise surveys completed on 12 sites, located immediately west out to approximately 5,000 feet east, between 1990 (TMC 1990) and 2010 (CMBC 2010), which, along with the subject property, are mapped in Figure 3. These and other materials used in the completion of this report are listed in Section 5.0, below.

2.2. Field Survey.

2.2.1. *Survey and Habitat Assessment Protocols.* For **Agassiz's desert tortoise**, CMBC followed the presence-absence survey protocol first developed by the USFWS in 1992 and revised in 2019. USFWS (2019) protocol recommends surveying transects at 10-meter (30-foot) intervals throughout all portions of a given parcel and its associated action area. The *action area* is defined by regulation as all areas to be affected directly or indirectly by proposed development and not merely the immediate area involved in the action (50 CFR §402.02). For this site, the action area is considered to be the same as the subject property, which includes the footprint of the proposed project. The preliminary site plan (Appendix F) shows the facility being developed on the southeastern part of the site. Since the site is smaller than 500 acres, it may be surveyed year-round (USFWS 2019).

For **burrowing owl**, although the formal habitat assessment does not specify a given interval to survey a site (Appendix C in CDFG 2012), subsequent breeding and nonbreeding studies identify that transects are surveyed at 7 to 20 meters (23 to 65 feet) apart, with five additional transects surveyed at 30-meter intervals out to 150 meters (500 feet) in adjacent areas in potential habitat (i.e., excluding areas substantially developed for commercial, residential, and/or industrial purposes) (Appendix D in CDFG 2012). With its narrower transect intervals, the tortoise survey is sufficient to cover the site for burrowing owl. The focus of the survey is to find and inspect all burrows sufficiently large to be used by burrowing owls. Importantly, this methodology is considered a formal *habitat assessment* for presence of burrowing owls, which can be conducted any time of the year. Had burrowing owl sign been found, which it was not, it would have then been necessary to perform breeding burrowing owl surveys during the spring and summer as outlined in CDFG (2012).

2.2.2. *Field Survey Methods.* For a total of 8.0 hours, between 1100 and 1600 hours on 5 February 2021 and 0945 and 1245 on 6 February 2021, Ed LaRue of CMBC surveyed the site and adjacent areas as described herein. This entailed a survey of 40 transects, spaced at 10-meter intervals and oriented in a north-south direction throughout the 40-acre± parcel. As depicted in Figure 2, peripheral transects were surveyed for detection of burrowing owls at 30-meter intervals to the west and north in contiguous, undeveloped areas. Copies of CMBC's data sheets completed in the field and USFWS' (2019) pre-project survey data sheet are included in this report (see Appendix C).

As the site was surveyed, LaRue kept tallies of observable human disturbances encountered on each of the transects he surveyed. The results of this method provide *encounter rates* for observable human disturbances. For example, two roads observed on each of 40 transects would yield a tally of 80 roads (i.e., two roads encountered 40 times). Habitat quality, adjacent land uses, and this disturbance information are discussed below in Section 3.2 relative to the potential occurrence of Agassiz's desert tortoise and other special status species on and adjacent to the subject property.

Weather conditions recorded at the beginning and ending of the two survey days included temperatures measured approximately 5 centimeters above the ground, percent cloud cover, and wind speeds measured by a hand-held Kestrel® weather and wind speed meter, as reported in Table 1.

Table 1. Weather Summary Data for Two-day Survey in 2021			
Date 2021	Begin, End, Total hours	Weather Conditions	
		Beginning	Ending
February 5	1100 to 1600 = 5 hrs	67°F, 3 ↑ 8 mph, 0% cloud	66°F, 1 ↑ 3 mph, 0% cloud
February 6	0945 to 1245 = 3 hrs	57°F, 1 ↑ 3 mph, 0% cloud	64°F, 1 ↑ 3 mph, 0% cloud

All plant and animal species identified during the survey were recorded in field notes and are listed in Appendices A and B, respectively. A Garmin® hand-held, global positioning system (GPS) unit was used to survey straight transects and record Universal Transverse Mercator (UTM) coordinates (North American Datum – NAD 83) for property boundaries, rare species locations, and other pertinent information (Appendix C). A digital camera was used to take representative photographs (Appendix D), with locations and directions of exhibits shown in Figure 5. ©2021 Google™ Earth was accessed via the internet to provide recent aerial photographs of the subject property and surrounding areas (Figure 4).

In October 2020, the California Fish and Game Commission accepted as complete a petition to list Joshua tree as a California Endangered Species. The Commission has a year to consider the petition and publish its determination, which is expected in October 2021. To provide data requested in a December 2020 letter from San Bernardino County to a client in the community of Joshua Tree, LaRue recorded locations of 112 Joshua trees using a Garmin GPS unit, which has a horizontal accuracy of 2 to 3 meters. Additional information taken for each tree included number of trunks, height(s), range of heights from the shortest to tallest trunks, and a general health assessment of poor, moderate, or good based on the color of leaves (i.e., spikes), necrosis on the leaves, posture (i.e., erect versus leaning), and dead versus live branches on each tree. The tabulated information for each Joshua tree is included in Appendix E.

Two other species associated with the main channel in Joshua Tree Creek that are protected by County and State ordinances (see Section 3.3.2., below) include 11 catclaw acacia [*Senegalia (Acacia) greggii*] and 7 smoke tree (*Psorothamnus spinosus*) plants. UTM coordinates were taken for all individual trees observed onsite, coordinates are provided in Appendix E, and locations are mapped in Figure 2.

3.0. Results

3.1. Common Biological Resources. The common plant and animal species identified during the survey are listed in Appendices A and B, respectively. Based on DeLorme Topo USA® 10.0 software, elevations on the subject property range from approximately 2,760 feet (841 meters) at the southwest corner down to 2,720 feet (829 meters) at the northeast corner. Terrain is relatively flat with a slight northeastern aspect. Soils are mostly sandy with scattered rock. Joshua Tree Creek, flowing from southwest-to-northeast through the site, is a USGS-designated blueline stream (see Section 3.3.1. herein for more information).

3.1.1. *Common Flora.* The 60 plant species identified during the survey are listed in Appendix A. The plant community is best characterized as Mojavean creosote bush scrub. Dominant perennial species include creosote bush (*Larrea tridentata*), burrobrush (*Ambrosia dumosa*), desert tea (*Ephedra californica*), desert senna (*Senna armata*), indigo bush (*Psoralea arborescens*), and in places, four-winged saltbush (*Atriplex canescens*). Other, somewhat less dominant perennial shrubs include California buckwheat (*Eriogonum fasciculatum*), desert mallow (*Sphaeralcea ambigua*), and white rhatany (*Krameria bicolor*). It is an indicator of the degraded nature of the site and prevalent urbanization of the immediate area that nine of the 60 species observed (15%) are not native to California.

As depicted, particularly in the upper half of Figure 4, Joshua Tree Creek occupies most of the southern half of the site, running southwest-to-northeast, with the main channel located on the southern portions of the site. Although the aerial image may suggest that the main part of the creek runs diagonally through the middle of the site, in fact, the main channel is accurately represented in the unnumbered figure in Section 3.1.1., below. This is also reflected in Figure 2, which shows the mesic-adapted catclaw acacia and smoke tree plants distributed along the main wash channel to the south. In addition to smoke tree and acacia, plants that are more common along the main channel than elsewhere include Mexican palo verde (*Parkinsonia aculeata*), brickellbush (*Brickellia incana*), cheesebush (*Ambrosia salsola*), sandpaper plant (*Petalonyx thurberi*), rayless encelia (*Encelia frutescens*), and green joint-fir (*Ephedra viridis*).

3.1.2. *Common Fauna.* The 2 reptile, 16 bird, and 8 mammal species identified during the survey are listed in Appendix B. Given the timing of surveys and relatively cool temperatures, common side-blotched lizard (*Uta stansburiana*) was the only reptile observed, and desert iguana (*Dipsosaurus dorsalis*) was identified by diagnostic scats. Other locally common reptile species that may occur include zebra-tailed lizard (*Callisaurus draconoides*), long-nosed leopard lizard (*Gambelia wislizenii*), desert horned lizard (*Phrynosoma platyrhinos*), desert night lizard (*Xantusia vigilis*), red racer (*Masticophis flagellum*), glossy snake (*Arizona elegans*), gopher snake (*Pituophis melanoleucus*), long-nosed snake (*Rhinocheilus lecontei*), and various rattlesnake species (*Crotalus* spp.).

Locally common, year-round resident bird species that are benefitted by the urbanizing development prevalent in much of the Morongo Basin that were observed onsite included rock dove (*Columba livia*), common raven (*Corvus corax*), house finch (*Carpodacus mexicanus*), and European starling (*Sturnus vulgaris*). Development-tolerant species that may also be found in pristine areas included Say's phoebe (*Sayornis saya*), verdin (*Auriparus flavipes*), great horned owl (*Bubo virginianus*), mourning dove (*Zenaidura macroura*), Gambel's quail (*Callipepla gambelii*), horned lark (*Eremophila alpestris*), greater roadrunner (*Geococcyx californianus*), cactus wren (*Campylorhynchus brunneicapillus*), and ladder-backed woodpecker (*Picoides scalaris*), the latter two of which are likely to nest in Joshua trees. Incidental seasonal visitors included white-crowned sparrow (*Zonotrichia leucophrys*), Brewer's sparrow (*Spizella breweri*), and Costa's hummingbird (*Calypte costae*).

The eight mammal species detected onsite included small mammals [kangaroo rat (*Dipodomys* sp.), antelope ground squirrel (*Ammospermophilus leucurus*), California ground squirrel (*Otospermophilus beecheyi*), and desert woodrat (*Neotoma lepida*)]; medium-sized mammals [Audubon cottontail (*Sylvilagus audubonii*) and black-tailed hare (*Lepus californicus*)]; and two predators [coyote (*Canis latrans*) and bobcat (*Lynx rufus*)]. The presence of California ground squirrels and absence of kit fox (*Vulpes macrotis*) and American badger (*Taxidea taxus*) are indicators of the regional urbanization that has impaired native habitats onsite and in much of the Morongo Basin.

3.2. Uncommon Biological Resources.

3.2.1. *Agassiz's Desert Tortoise.* A significant paper was published in June 2011 (Murphy et al. 2011) whereby the “desert tortoise” of the Mojave Desert was split into two species, including *Gopherus agassizii*, referred to as “Agassiz’s desert tortoise,” and a newly described species, *G. morafkai*, referred to as “Morafka’s desert tortoise,” which occurs in the Sonoran Desert. According to Murphy et al. (2011), “...this action reduces the distribution of *G. agassizii* to only 30% of its former range. This reduction has important implications for the conservation and protection of *G. agassizii*, which may deserve a higher level of protection.” Then in 2016 (Edwards et al. 2016), a third species of tortoise was described, referred to as the “Goode’s Thornscrub Tortoise” (*Gopherus evgoodei*), which further reduced the perceived range of Morafka’s desert tortoise. Agassiz’s desert tortoise is the threatened species that occurs in the region surrounding the subject property.

No tortoise sign was found either onsite or in adjacent areas during this focused, protocol survey for the species (USFWS 2019). Based on the absence of tortoise sign on the subject property, in adjacent areas, and reported from the region (see Figure 3), CMBC concludes that Agassiz’s desert tortoise is absent from the subject property and action area. There is some, limited likelihood of wild tortoises entering the site from adjacent areas to the north (see bottom half of Figure 4), either to pass through the site or establish temporary residency.

Encounter rates for observable human disturbances included (in descending order of prevalence) 173 dirt roads and trails (up to five trails crossed 40 times), 160 cross-country vehicle tracks (OHV), 53 domestic dog signs (mostly tracks), 31 dump sites (mostly vegetation), 1 old shot gun shell cartridge, and 1 clay pigeon target. Verbena Road corresponding to the northern boundary, the extension of Chollita Road through the site, the extension of Commercial Street through the site, which also has a wooden pole utility line, an unnamed road along the southern boundary, and a few splits in the roads on the western quarter of the site are the main roads and trails that were tallied. Although not reflected in the tallies, these roads are frequently used by pedestrians and bicyclists. There was also a homeless man living onsite at the time of the survey. The amount and distribution of trash and camping debris suggest persisting presence of this or other individuals living on the site. Although some of the dog sign may have resulted from unrestrained pets entering from adjacent areas, most of it is likely associated with walking dogs along the roads, which was observed once during the survey. Similarly, the elevated level of dumping is due to the increased access provided by these roads. Cumulatively, these are the types of human uses that have eliminated tortoises from this site, and the isolation due to human development in adjacent areas limits the likelihood of recolonization of the site by immigrating tortoises.

As depicted in Figure 3, CMBC personnel have surveyed 12 sites within approximately one mile of the subject property. The color codes in Figure 3 reveal that no tortoise sign was found on six sites, including the subject property, and one pipeline alignment (CMBC 2010; although tortoise sign was found along this same pipeline approximately 4,000 feet west of the property, west of Sunny Vista Road); tortoise sign was found on one site during a survey (CMBC 2006a) and an adult tortoise was observed walking through another site during the survey (CMBC 2010); and there were three sites where tortoise sign was found in adjacent areas only. These observations and this pattern of occurrence suggest that tortoises have somewhat persisted in areas adjacent to urban development but are being extirpated over time.

With the publication of the BLM's (2016) Record of Decision, the Desert Renewable Energy Conservation Plan (DRECP) revised the 1980 California Desert Conservation Area Plan (CDCA Plan; BLM 1980) in significant ways for the conservation and recovery of desert tortoises in the California Deserts. Although desert tortoise critical habitat was not changed (USFWS 1994a), Desert Wildlife Management Areas (DWMAs; USFWS 1994b) and Multiple Use Classes on BLM lands were eliminated. In addition to critical habitat, the two main designated areas under the DRECP CDCA Plan amendment that provide for tortoise conservation and recovery are Areas of Critical Environmental Concern (ACECs) and California Desert National Conservation Lands (CDNCLs). The subject property is not found within any of these conservation areas.

3.2.2. *Other Special Status Species.* U.S. Fish and Wildlife Service (2008), California Department of Fish and Wildlife [CDFW 2021a for California Natural Diversity Data Base; 2021b for Special Plant Species list; 2020 for Special Animal Species list; and California Native Plant Society (CNPS 2021)] maintain lists of animals and/or plants considered rare, threatened, or endangered, which are herein collectively referred to as "special status species." Desert unicorn-plant was the only regulatory agency-designated special status species identified during the current survey. Life history and occurrence information for rare species observed during the survey or on one of the sites depicted in Figure 3 are given in the next few subsections.

Desert unicorn-plant (*Proboscidea althaeifolia*) is a List 4.3 species, meaning plants that are of limited distribution - A watch list; but not very threatened in California (low degree/immediacy of threats or no threats known) (CNPS 2021). One was observed about 4,200 feet east in 2010 (CMBC 2010), and a single seed pod was found in the main channel of Joshua Tree Creek onsite during the current survey (mapped in Figure 2 and depicted in Exhibit 7 in Appendix D). Although no seedling plants were observed, desert unicorn-plant may be found in active wash areas throughout the property.

Little San Bernardino Mountains linanthus (*Linanthus maculatus* ssp. *maculatus*) is considered by CNPS (2021) to be a List 1B.2 plant, which means it is rare, threatened, or endangered in California and elsewhere; and, specifically, fairly threatened in California (moderate degree/immediacy of threat) and is not designated by either CDFW or USFWS. This annual herb, which blooms from March to May following winters of sufficient rainfall may be detectable for only a brief period and only following favorable rainfall conditions. Occurring in desert dunes, Joshua tree woodland, and Mojavean

creosote bush scrub (CNPS 2021), the diminutive annual plant is extremely difficult to find, requiring a focused survey for its detection. LaRue is very familiar with the species, having found 425 individual plants 4,500 feet east of the site (CMBC 2010) and 70 others approximately 2.5 miles west of the site (not included in Figure 3). Given the location and habitats, there is a high likelihood that it occurs on the subject property on substrates scoured by Joshua Tree Creek, but would not have been detectable during the current survey.

Cooper's hawk (*Accipiter cooperi*) is a year-round resident raptor species that is designated as a Watch List species by CDFW (2020). One was observed approximately 4,000 feet in 2008 (CMBC 2008) (Figure 3). There are not any nesting sites on the subject property but there are foraging habitats throughout, and plenty of small and medium-sized birds on which Cooper's hawks can prey.

Northern harrier (*Circus hudsonius*) is designated as a California Species of Special Concern (CDFW 2020) and does not have a federal status. Although there are a few locations in the West Mojave where harriers nest (Edwards Air Force Base and Harper Lake), they are mainly known as fall migrants through the region in September and October, with wintering birds largely departing by mid-April. Migrants in the deserts are widespread in open habitats, including marshes, grasslands, pastures, agricultural fields, saltbush scrub, and even creosote scrub. CMBC observed one on the 30-acre site located approximately 4,000 east of the site in 2009 (CMBC 2009). Northern harriers are not likely to forage onsite and would definitely not nest.

Prairie falcon (*Falco mexicanus*) is designated as a Watch List species by CDFW (2020) and a Bird of Conservation Concern by the USFWS (2008). Although not observed during the survey, CMBC observed prairie falcons on two occasions approximately 4,000 feet east of the site (CMBC 2005b, 2005c). There are no suitable nesting substrates (cliff faces and other inaccessible areas) onsite but foraging habitat exists throughout.

Loggerhead shrike (*Lanius ludovicianus*) is designated as a California Species of Special Concern by CDFW (2020) and a Bird of Conservation Concern by the USFWS (2008). Having been observed 44 times by CMBC personnel between 1989 and 2021, this has been the most frequently encountered rare bird species in the Morongo Basin. As mapped in Figure 3, loggerhead shrikes have been observed 4,000 feet east on four different surveys between 1999 and 2005 (CMBC 1999a, 1999b, 2005b, 2005c). Since shrikes may nest in both Joshua trees and Mohave yuccas (*Yucca schidigera*), there are both suitable nesting and foraging substrates for loggerhead shrikes throughout the subject property.

LeConte's thrasher (*Toxostoma lecontei*) is designated as a California Species of Special Concern by CDFW (CDFW 2020) and as a Bird of Conservation Concern by the USFWS (2008). With 40 observations between 1989 and 2021, LeConte's thrasher are the second most commonly observed rare bird species in the area, having been reported from 4 of the 12 sites in Figure 3 (CMBC 1999a, 1999b, 2008, and 2010). LeConte's thrashers may nest in several cactus species, particularly silver cholla (*Cylindropuntia echinocarpa*), which are common on the subject property and in larger streamside shrubs, and may forage throughout the subject property.

Burrowing owl is designated as a California Species of Special Concern by CDFW (2020), as a Bird of Conservation Concern by the USFWS (2008), and is considered Sensitive by the BLM (CDFW 2021a). It is one of the focal species specifically sought during field surveys, and is usually detected by distinctive feathers, zygodactyl (x-shaped) tracks, and whitewash (fecal material deposited away from burrows may be from other bird species). Although pellets and feathers are sufficiently distinctive that they may be identified away from burrows, it is one or more of these signs at sufficiently large burrows that are the most definitive means of determining burrowing owl use of a given site.

In the case of the subject property, there was no evidence of burrowing owl. Burrowing owls do not create their own burrows; rather they find existing burrows, which they may slightly modify in order to occupy. Typical existing burrows used by burrowing owls include abandoned kit fox dens, both active and inactive tortoise burrows, deeper badger digs, and inactive California ground squirrel burrows. All California ground squirrel burrows inspected during the survey were judged to be active, and burrowing owls would not cohabitate with them. That no such inactive burrows or tortoise burrows were found onsite may be one of the reasons no burrowing owl sign was found. In fact, no burrowing owls have been reported on any of the sites in Figure 3. For these reasons, burrowing owl is presumed absent from the subject property.

3.3. Other Protected Biological Resources.

3.3.1. *Stream Courses.* Stream courses provide relatively important resources to animals and plants. In dry years, and particularly during prolonged drought, annual plants may only germinate in the vicinity of washes where the water table is relatively near the surface. Perennial shrubs adjacent to washes are often the only plants that produce flowers and fruit, which in turn are important to insects and the avian predators that feed on them. Shrubs also tend to be somewhat taller and denser alongside washes, which provides cover for medium and larger sized animals that may use them as travel corridors. Biodiversity is generally enhanced by washes, and there are often both annual and perennial plants that are either restricted to or mostly associated with wash margins. There are both anecdotal accounts and published literature on washes being important to tortoises, which use them as travel corridors and access to nearby annual forage.

One can see in the unnumbered figure on the next page and in the lower portion of Figure 4 that Joshua Tree Creek has been significantly altered by previous development. The wash has clearly been channelized to the southwest and although containment is not obvious to the northeast, the creek runs through residential neighborhoods that have likely degraded it and impaired its usefulness as a mammal travel corridor. Even so, conditions on the subject property support at least one rare plant species (desert unicorn-plant), both protected (acacia and smoke tree) and unprotected streamside growth (Mexican palo verde and a half-dozen mesic-adapted shrubs), and cover for both coyotes and bobcats, which may not occur on such an isolated site without this growth providing cover within the main channel on the southern part of the site.

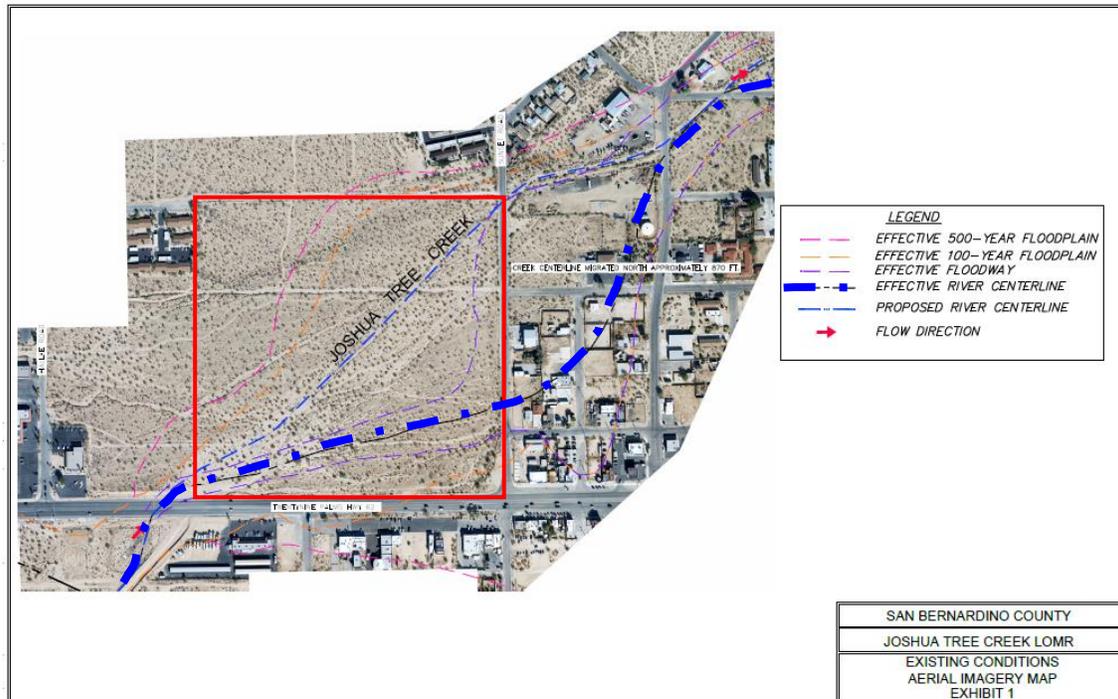

Figure Source: Mr. William Warner, NV5, on 4 February 2021

3.3.2. *Protected Plant Species.* At the County level, the San Bernardino County Development Code was revised and adopted on 12 April 2007. Chapter 88.01 Plant Protection and Management, Section 88.01.020 states, “The provisions of this Chapter apply to the removal and relocation of regulated trees or plants and to any encroachment (for example, grading) within the protected zone of a regulated tree or plant on all private land within the unincorporated areas of the County and on public lands owned by the County, unless otherwise specified...”

Section 88.01.060 Desert Native Plant Protection states, “This Section provides regulations for the removal or harvesting of specified desert native plants in order to preserve and protect the plants and to provide for the conservation and wise use of desert resources...”

Section 88.01.060(c) Regulated Desert Native Plants states, “The following desert native plants or any part of them, except the fruit, shall not be removed except under a Tree or Plant Removal Permit in compliance within Section 88.01.050 (Tree or Plant Removal Permits):

- (1) The following desert native plants with stems two inches or greater in diameter or six feet or greater in height:
 - (A) *Dalea spinosa* (smoke tree).
 - (B) All species of the genus *Prosopis* (mesquites).
- (2) All species of the family *Agavaceae* (century plants, nolinias, yuccas).
- (3) Creosote Rings, 10 feet or greater in diameter.
- (4) All Joshua trees.

- (5) Any part of the following species, whether living or dead:
- (A) *Olneya tesota* (desert ironwood).
 - (B) All species of the genus *Prosopis* (mesquites).
 - (C) All species of the genus *Cercidium* (palo verdes).” [Note that the palo verde species onsite, in the genus *Parkinsonia*, is not native to California, and therefore not the species listed in this section].

At the State level, the 1998 Food and Agricultural Code, Division 23: California Desert Native Plants, Chapter 3: Regulated Native Plants Act, Section 80073 states: The following native plants, or any parts thereof, may not be harvested except under a permit issued by the commissioner or the sheriff of the county in which the native plants are growing:

- (a) All species of the family Agavaceae (century plants, nolinias, yuccas).
- (b) All species of the family Cactaceae (cacti), except for the plants listed in subdivisions (b) and (c) of Section 80072 (i.e., saguaro and barrel cacti), which may be harvested under a permit obtained pursuant to that section.
- (c) All species of the family Fouquieriaceae (ocotillo, candlewood).
- (d) All species of the genus *Prosopis* (mesquites).
- (e) All species of the genus *Cercidium* (palo verdes).
- (f) *Senegalia (Acacia) greggii* (catclaw acacia).
- (g) *Atriplex hymenelytra* (desert holly).
- (h) *Dalea (Psoralea) spinosa* (smoke tree).
- (i) *Olneya tesota* (desert ironwood), including both dead and live desert ironwood.

Joshua tree, Mohave yucca, catclaw acacia, smoke tree, silver cholla, pencil cholla, hedgehog cactus, and beavertail cactus are the plant species included in one or both of the above lists that were observed on the subject property. Among the four cactus species, silver cholla is the most widespread and common, followed by pencil cholla, and beavertail as a distant third, and in all cases, cacti are more common on the northwestern portions of the site than to the east and southeast, in particular.

With the designation of Joshua tree as a Candidate Species for Listing as Endangered, its importance to the local and regional ecosystem has increased as have its potential economic impacts. LaRue did not notice any evidence of fire on the site, but the higher densities to the northwest and near-absent densities to the southeast (only 5 of 112 trees were found south of the visible diagonal creek through the center of the site) may suggest historical fire on the site or some diminishment due to water flows in the creek, which is more prevalent to the south.

4.0. Conclusions and Recommendations

4.1. Impacts to Agassiz’s Desert Tortoise and Proposed Mitigation. Based on the absence of tortoise sign onsite and in adjacent areas, and available information reviewed for this habitat assessment, CMBC concludes that tortoises are absent from the subject property. There is a limited likelihood that one could enter the site from the north prior to ground disturbance. As such, no impacts are anticipated and no mitigation measures are recommended.

Whereas USFWS survey protocols historically indicated that the results of a given survey were valid for the period of only one year (USFWS 2010 and 2018), according to the revised, 2019 USFWS pre-project survey protocol, “*If the survey data are more than a year old, we encourage project proponents to contact us at the earliest possible time to allow us to assess the specific circumstances under which the data were collected (e.g., time of year, drought/rainfall conditions, size and location of the site, etc.) and to discuss whether additional surveys would be appropriate. Spatial information can be provided in pdf and GIS formats.*” At the time of this writing, the Palm Springs office of the USFWS would be the appropriate office to contact [(760) 322-2070] to determine if another survey should be performed prior to ground disturbance, if it does not occur before February 2022.

Regardless of survey results and conclusions given herein, tortoises are protected by applicable State and federal laws, including the California Endangered Species Act and Federal Endangered Species Act, respectively. As such, if a tortoise is found onsite at the time of construction, all activities likely to affect that animal(s) should cease and the County contacted to determine appropriate steps.

Importantly, nothing given in this report, including recommended mitigation measures, is intended to authorize the incidental take of Agassiz’s desert tortoises during site development. Such authorization must come from the appropriate regulatory agencies, including CDFW (i.e., authorization under section 2081 of the Fish and Game Code) and USFWS [i.e., authorization under section 10(a)(1)(B) of the Federal Endangered Species Act].

4.2. Impacts to Other Biological Resources and Proposed Mitigation.

4.2.1 *Other Special Status Species.* Based on the field survey and habitat assessment, CMBC concludes that none of the following special status species reported from the region will be adversely affected by site development: Cooper’s hawk, northern harrier, prairie falcon, or burrowing owl. As such, no adverse impacts have been identified and no mitigation measures are recommended.

Those species either identified during the current survey or for which suitable habitats are present include desert unicorn-plant, Little San Bernardino Mountains linanthus, loggerhead shrike, and LeConte’s thrasher. If the County needs to ascertain the level of impacts for the two plant species, a focused survey should be performed during April or early May, and 2021 would be a good year given winter rainfalls. There are measures given below in Section 4.2.2.c. intended to protect nesting birds, including these two rare species.

4.2.2. *Other Protected Biological Resources.*

4.2.2.a. Stream Courses. Fish and Game Code section 1602 requires any person, state or local governmental agency, or public utility to notify CDFW before beginning any activity that will do one or more of the following: (1) substantially divert or obstruct the natural flow of any river, stream or lake; (2) substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake; or (3) deposit

or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. Fish and Game Code section 1602 applies to all perennial, intermittent, and ephemeral rivers, streams, and lakes in the state, including many dry washes in desert regions.

The consultant will generally collect data along each potential jurisdictional stream course, including measurements of the channels; dominant plants comprising the forb, shrub, and tree strata; and photographs at regular intervals, depending on how long the course is (100-foot intervals works well). If CDFW determines that the activity may substantially adversely affect fish and wildlife resources, a Streambed Alteration Agreement will be prepared. The Agreement includes reasonable conditions necessary to protect those resources and must comply with CEQA. The proponent may proceed with the activity in accordance with the final Agreement. The form is available at <https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=3754&inline=1>. The completed form is sent along with the field baseline data to CDFW, Inland Deserts Region, Streambed Alteration, 3602 Inland Empire Boulevard, Suite C-220, Ontario, California 91764.

4.2.2.b. Protected Plants. It is beyond the scope of this focused survey and general resource assessment to provide necessary baseline data and a proposed program to minimize and mitigate impacts to protected native desert plants, with the following exceptions. LaRue paid particular attention to Joshua trees, catclaw acacias, and smoke trees so the distributions given in Figure 2 and the data for all three of these species in Appendix E will be useful to determine potential impacts and plan avoidance and/or mitigation measures. The County may require a Desert Native Plant Assessment to identify the numbers and locations of the other protected plants (particularly cacti species) to be in compliance with the California Native Plant Protection Act. Joshua tree, Mohave yucca, catclaw acacia, smoke tree, silver cholla, pencil cholla, hedgehog cactus, and beavertail cactus are species found on-site that may be subject to pertinent development codes.

4.2.2.c. Bird Nests. Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests, including raptors and other migratory nongame birds (As listed under the Migratory Bird Treaty Act). Typically, CDFW requires that vegetation not be removed from a project site between March 15 and September 15 to avoid impacts to nesting birds. If it is necessary to commence project construction between March 15 and September 15, a qualified biologist should survey all shrubs and structures within the project site for nesting birds, prior to project activities (including construction and/or site preparation).

Surveys should be conducted at the appropriate time of day during the breeding season, and surveys would end no more than three days prior to clearing. CDFW is typically notified in writing prior to the start of the surveys. Documentation of surveys and findings should be submitted to the CDFW within ten days of the last survey. If no nesting birds were observed project activities may begin. If an active bird nest is located, the plant in which it occurs should be left in place until the birds leave the nest. No construction is allowed near active bird nests of threatened or endangered species.

Appendix A. Plant Species Detected

The following plant species were identified on-site during the focused floral inventory described in this report. Protected plant species are highlighted in red and signified by “(PPS)” following the common names.

GNETAE

Ephedraceae

Ephedra californica

Ephedra viridis

ANGIOSPERMAE: DICOTYLEDONES

Asteraceae

Ambrosia acanthicarpa

Ambrosia dumosa

Ambrosia salsola

Brickellia incana

Encelia frutescens

Palafoxia linearis

Stephanomeria exigua

Stephanomeria pauciflora

Boraginaceae

Amsinckia tessellata

Cryptantha angustifolia

Cryptantha c.f. *micrantha*

Brassicaceae

**Brassica tournefortii*

Descurainia pinnata

**Sisymbrium altissimum*

**Sisymbrium irio*

Cactaceae

Cylindropuntia echinocarpa

Cylindropuntia ramosissima

Echinocereus engelmannii

Opuntia basilaris

Chenopodiaceae

Atriplex canescens

**Salsola tragus*

GNETAE

Joint-fir family

Desert tea

Green joint-fir

DICOT FLOWERING PLANTS

Sunflower family

Annual bur-sage

Burrobush

Cheesebush

Brickellbush

Rayless encelia

Desert Spanish-needles

Milk aster

Desert milk aster

Borage family

Fiddleneck

Narrow-leaved forget-me-not

Mountain red root

Mustard family

Saharan mustard

Tansy

Tumble mustard

London rocket

Cactus family

Silver cholla (PPS)

Pencil cholla (PPS)

Hedgehog cactus (PPS)

Beavertail cactus (PPS)

Goosefoot family

Four-winged saltbush

Russian thistle

Water-leaf family

Phacelia

Krameria family

White rhatany

Mint family

Thistle sage

Chia

Stick-leaf family

Sandpaper plant

Mallow family

Desert unicorn plant (PPS)

Desert mallow

Evening-primrose family

Brown-eyed primrose

Oenothera

Four o'clock family

Desert wishbone plant

Phlox family

Woolly star

Woolly star

Polygonaceae

Chorizanthe brevicornu
Eriogonum fasciculatum
Eriogonum inflatum
Eriogonum maculatum
Eriogonum nidularium
Eriogonum plumatella

Solanaceae

Datura wrightii

Zygophyllaceae

Fagonia laevis
Larrea tridentata

Buckwheat family

Brittle spineflower
 California buckwheat
 Desert trumpet
 Spotted buckwheat
 Whiskbroom
 Yucca buckwheat

Nightshade family

Jimsonweed

Caltrop family

Fagonia
 Creosote bush

ANGIOSPERMAE: MONOCOTYLEDONES

MONOCOT FLOWERING PLANTS

Liliaceae

Yucca brevifolia
Yucca schidigera

Lily family

Joshua tree (PPS)
 Mojave yucca (PPS)

Poaceae

**Bromus madritensis* ssp. *rubens*
 **Bromus tectorum*
 **Hordeum murinum*
Pleuraphis rigida
 **Schismus* sp.

Grass family

Red brome
 Cheat grass
 Hare barley
 Big galleta
 Split-grass

* - indicates a non-native (introduced) species.

c.f. - compares favorably to a given species when the actual species is unknown.

Some species may not have been detected because of the seasonal nature of their occurrence. Common names are taken from Beauchamp (1986), Hickman (1993), Jaeger (1969), and Munz (1974).

Appendix B. Animal Species Detected

The following animal species were detected during the general biological inventory described in this report. **Special status animal species are highlighted in red and signified by “(SSA)” following the common names.**

REPTILIA

Iguanidae

Dipsosaurus dorsalis

Uta stansburiana

AVES

Phasianidae

Callipepla gambelii

Columbidae

Columba livia

Zenaida macroura

Cuculidae

Geococcyx californianus

Strigidae

Bubo virginianus

Trochilidae

Calypte costae

Picidae

Picoides scalaris

Tyrannidae

Sayornis saya

Alaudidae

Appendix C. Field Data Sheets Completed on 5 and 6 February 2021

The USFWS and County recommend that consultants include copies of the data collected in the field from which the results and conclusions given in their reports are derived. As such, below and on the following pages are copies of the data sheets completed by Ed LaRue on 5/6 February 2021.

USFWS 2009 DESERT TORTOISE PRE-PROJECT SURVEY DATA SHEET

Date of survey: 5/6-2-2021 Survey biologist(s): Ed LaRue
(day, month, year)

Site description: 40-acre site in Joshua Tree North of Highway 62
(project name and size; general location)

County: San Bernardino Quad: Joshua Tree North Location: 562940/377740 (NAD83)
(UTM coordinates, lat-long, and/or TRS; map datum)

Transect #: 40 Transect length: 300' Type of survey: 100' x 300' Presence/Absence Survey
(project area size to be surveyed; 100% coverage/probabilistic sampling)

GPS Start-point: 562940/377740 (2135 ft) Start time: 11:00+0445 am/pm
(easting, northing, elevation in meters)

GPS End-point: 562540/377740 (2160 ft) End time: 1:00+0445 am/pm
(easting, northing, elevation in meters)

Start Temp: _____ °C Weather: See Report

End Temp: _____ °C

Appendix D. Photographic Exhibits

Locations of the seven photographic exhibits on the next four pages are depicted in Figure 5.

Exhibit 1. View from the northeast corner of the parcel, facing southwest (see Figure 5 for locations and directions of photographs).

Exhibit 2. View from the southeast corner of the parcel, facing northwest.

Exhibit 3. View from the southwest corner of the parcel, facing northeast.

Exhibit 4. View from the northwest corner of the parcel, facing southeast.

Exhibit 5. View of Joshua Tree Creek, from near west-central boundary, facing northeast.

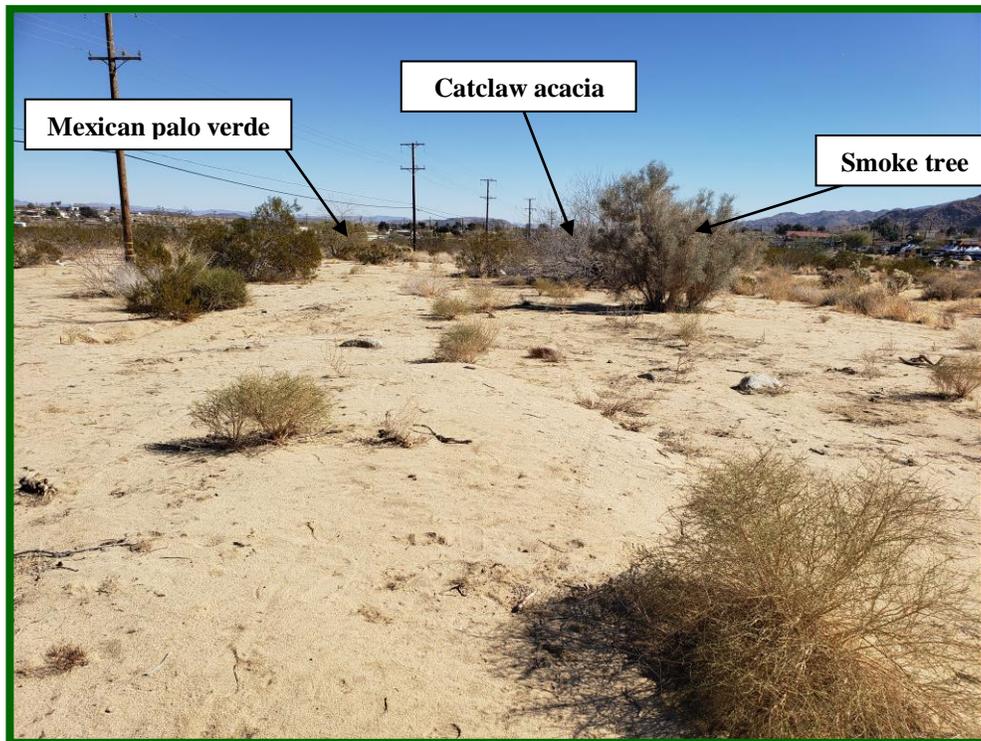

Exhibit 6. View of southern wash, from near southwest corner, facing east.

Exhibit 7. Single desert unicorn-plant seed pod found in southern wash, near southeast corner.

USGS Quadrangle: Joshua Tree North, Calif., 7.5' quadrangle (Section 26, T1N R6E, San Bernardino Baseline and Meridian)

Project Size: Approximately 40 acres

Keywords: Southern Mojave Desert; Phase I cultural resources survey; no "historical resources" under CEQA

MANAGEMENT SUMMARY

Between February and April 2021, at the request of NV5, CRM TECH performed a cultural resources study on 40 acres of undeveloped land in the unincorporated community of Joshua Tree, San Bernardino County, California. The project area consists of Assessor's Parcel Number 0602-371-06, located at the northwest corner of Sunset Road and Twentynine Palms Highway (State Route 62), in the southeast quarter of Section 26, T1N R6E, San Bernardino Baseline and Meridian.

The study is part of the environmental review process for a proposed development on the property. The County of San Bernardino, as the lead agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA). The purpose of this study is to provide the County with the necessary information and analysis to determine whether the proposed project would cause a substantial adverse change to any "historical resources," as defined by CEQA, that may exist in or around the project area.

In order to identify such resources, CRM TECH reviewed the results of a recently completed proximal historical/archaeological resources records search, initiated a Native American Sacred Lands File search, pursued historical background research, and carried out an intensive-level field survey. Throughout the course of these research procedures, no potential "historical resources" were encountered within the project area.

Based on these findings, CRM TECH recommends to the County of San Bernardino a finding of *No Impact* regarding "historical resources." No further cultural resources investigation is recommended for the project unless development plans undergo such changes as to include areas not covered by this study. However, if buried cultural materials are encountered during future earth-moving operations on the property resulting from the subdivision, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

INTRODUCTION

Between February and April 2021, at the request of NV5, CRM TECH performed a cultural resources study on 40 acres of undeveloped land in the unincorporated community of Joshua Tree, San Bernardino County, California (Fig. 1). The project area consists of Assessor's Parcel Number 0602-371-06, located at the northwest corner of Sunset Road and Twentynine Palms Highway (State Route 62), in the southeast quarter of Section 26, T1N R6E, San Bernardino Baseline and Meridian (Figs. 2, 3).

The study is part of the environmental review process for a proposed development on the property. The County of San Bernardino, as the lead agency for the project, required the study in compliance with the California Environmental Quality Act (CEQA; PRC §21000, et seq.). The purpose of this study is to provide the County with the necessary information and analysis to determine whether the proposed project would cause a substantial adverse change to any "historical resources," as defined by CEQA, that may exist in or around the project area.

In order to identify such resources, CRM TECH reviewed the results of a recently completed proximal historical/archaeological resources records search, initiated a Native American Sacred Lands File search, pursued historical background research, and carried out an intensive-level field survey. The following report is a complete account of the methods, results, and final conclusion of the study. Personnel who participated in the study are named in the appropriate sections below, and their qualifications are provided in Appendix 1.

SETTING

CURRENT NATURAL SETTING

The community of Joshua Tree is located in the Morongo Basin, on the southern edge of the Mojave Desert, to the north of the Little San Bernardino Mountains and west of the Pinto Mountains. The climate and environment of the area is typical of southern California “high desert” country, so-called because of its higher elevation than the Colorado Desert to the south. The climate is marked by extremes in temperature and aridity, with summer highs in July averaging over 100°F and winter lows in December averaging 35°F. The average annual precipitation is roughly five inches, most of which occurs during late winter, early spring, and the occasional monsoon storms in summer.

Situated in the central portion of the small town, the undeveloped project area is bounded by Sunset Road on the east, Twentynine Palms Highway on the south, and Verbena Road on the north, adjoining a housing complex and undeveloped land on the west (Fig. 3). The surrounding area includes commercial and residential properties as well as the local library, post office, churches, and hotels. Two sets of power transmission lines traverse the property in an east-west direction, with the northern line paralleling the unpaved Chollita Road, one of several dirt roads across the project area.

Elevations in the project area range approximately from 2,735 to 2,765 feet above mean sea level, with a slight incline to the west. Several drainages traverse the project area in a northeast-southwest direction. Refuse is scattered along the dirt roads and drainages, primarily construction and landscaping debris including lumber, nails, asphalt, pipes, and a recently worked mass of obsidian. A transient encampment sits in the northwest corner of the property. Vegetation observed includes Joshua trees, mesquite, yucca, creosote bush, several varieties of cholla and beavertail cactus, and other small grasses and brush (Fig. 4).

Figure 4. Typical landscape in the project area. (Photograph taken on February 12, 2021; view to the northeast along an unpaved road)

CULTURAL SETTING

Prehistoric Context

In order to understand the progress of Native American cultures prior to European contact, archaeologists have devised chronological frameworks on the basis of artifacts and site types that date back some 12,000 years. Currently, the chronology most frequently applied in the Mojave Desert divides the region's prehistory into five periods marked by changes in archaeological remains, reflecting different ways in which Native peoples adapted to their surroundings. According to Warren (1984) and Warren and Crabtree (1986), the five periods are as follows: the Lake Mojave Period, 12,000 years to 7,000 years ago; the Pinto Period, 7,000 years to 4,000 years ago; the Gypsum Period, 4,000 years to 1,500 years ago; the Saratoga Springs Period, 1,500 years to 800 years ago; and the Protohistoric Period, 800 years ago to European contact.

More recently, Hall (2000) presented a slightly different chronology for the region, also with five periods: Lake Mojave (ca. 8000-5500 B.C.), Pinto (ca. 5500-2500 B.C.), Newberry (ca. 1500 B.C.-500 A.D.), Saratoga (ca. 500-1200 A.D.), and Tecopa (ca. 1200-1770s A.D.). According to Hall (*ibid.*:14), small mobile groups of hunters and gatherers inhabited the Mojave Desert during the Lake Mojave sequence. Their material culture is represented by the Great Basin Stemmed points and flaked stone crescents. These small, highly mobile groups continued to inhabit the region during the Pinto Period, which saw an increased reliance on ground foods, small and large game animals, and the collection of vegetal resources, suggesting that "subsistence patterns were those of broad-based foragers" (*ibid.*:15). Artifact types found in association with this period include the Pinto points and *Olivella* sp. spire-lopped beads.

Distinct cultural changes occurred during the Newberry Period, in comparison to the earlier periods, including "geographically expansive land-use pattern...involving small residential groups moving between select localities," long-distance trade, and diffusion of trait characteristics (Hall 2000:16). Typical artifacts from this period are the Elko and Gypsum Contracting Stem points and Split Oval beads. The two ensuing periods, Saratoga and Tecopa, are characterized by seasonal group settlements near accessible food resources and the intensification of the exploitation of plant foods, as evidenced by groundstone artifacts (*ibid.*:16).

Hall (2000:16) states that "late prehistoric foraging patterns were more restricted in geographic routine and range, a consequence of increasing population density" and other variables. Saratoga Period artifact types include Rose Spring and Eastgate points as well as Anasazi grayware pottery. Artifacts from the Tecopa Period include Desert Side-notched and Cottonwood Triangular points, buffware and brownware pottery, and beads of the Thin Lipped, Tiny Saucer, Cupped, Cylinder, steatite, and glass types (*ibid.*).

Ethnohistoric Context

The Native American groups living near the project location in recent centuries were the Serrano and the Chemehuevi. The Serrano's homeland was centered in the nearby San Bernardino Mountains but also included lowlands along both flanks of the mountain range. The Chemehuevi, a subgroup of the Southern Paiute, traditionally occupied the portion of the Mojave Desert extending east to the

Colorado River. Both groups belong to the larger Shoshonean language stock, which in turn is part of the Uto-Aztecan linguistic family. The leading anthropological works on the Chemehuevi include Kroeber (1925), Laird (1976), and Kelly and Fowler (1986), while the basic references on the Serrano are Kroeber (1925), Strong (1929), and Bean and Smith (1978). The following ethnohistoric discussion is based primarily on these sources.

Prior to European contact, native subsistence practices were defined by the surrounding landscape and were based primarily on the cultivating and gathering of wild foods and hunting, exploiting nearly all of the resources available. The Serrano settled mostly on elevated terraces, hills, and finger ridges near where flowing water emerged from the mountains, while the Chemehuevi, with fewer people spread over a much wider area, cultivated, gathered, and hunted in the open deserts, but were also known for their agricultural practices, in particular the cultivation of corn, beans, squash, and melons. Social customs brought members of each tribe together at important base camps or villages for annual ceremonies and tribal interaction with neighboring groups.

Both tribal groups had a variety of technological skills that they used to acquire subsistence, shelter, and medicine or to create ornaments and decorations. Common tools included manos and metates, mortars and pestles, hammerstones, fire drills, awls, arrow straighteners, and stone knives and scrapers. These lithic tools were made from locally sourced material as well as materials procured through trade or travel. They also used wood, horn, and bone spoons and stirrers; baskets for winnowing, leaching, grinding, transporting, parching, storing, and cooking; and pottery vessels for carrying water, storage, cooking, and serving food and drink. Much of this material cultural, elaborately decorated, does not survive in the archaeological record. As usual, the main items found archaeologically relate to subsistence activities.

Although contact with Europeans may have occurred as early as 1771 or 1772, direct European influence on Serrano and Chemehuevi lifeways began in the 1810s, when the mission system expanded to the edge of Serrano territory. Between then and the end of the mission era in 1834, most of the Serrano were removed to the nearby missions. While less affected by Spanish and Mexican policies due to their more remote location, the Chemehuevi experienced increasing conflict with encroaching Euroamerican prospectors and settlers during the late 19th century. By the early 20th century, the majority of Serrano and Chemehuevi population was incorporated into the reservation system. Today, most Serrano descendants are found on the San Manuel and the Morongo Indian Reservations, while the Chemehuevi are divided among the Chemehuevi, the Colorado River, and the Morongo Reservations.

Historic Context

Because of its harsh, unforgiving environment, non-Native settlement in the Mojave Desert was late to start and slow in subsequent development. Although the Mojave Desert received its first European visitor, the famed Spanish explorer Francisco Garcés, as early as 1776 (Beck and Haase 1974:15), for the next 70 years the inland regions of Alta California were largely ignored by the Spanish and Mexican authorities in their colonization schemes. During that period, the presence of non-Natives in the Mojave Desert was essentially confined to a few trails that were established over the years, most notably the Old Spanish Trail, a pack-train road established between southern California and Santa Fe, New Mexico, in the 1830s (Warren 2004).

Beginning in the early 1860s, as the gold mines in the Mother Lode country of the Sierra Nevada declined in production, groups of former forty-niners embarked on fresh explorations into the desert between California, Nevada, and Arizona. Before long, new mining districts sprang up throughout the Mojave Desert. However, the discovery of these early bonanzas was frequently incidental to travel across the desert to richer diggings elsewhere, as in the case of the La Paz gold rush in Arizona (Warren et al. 1981:96). A few renowned mining towns, such as Ivanpah and Calico, boomed in the 1870s and 1880s, but the first major strike in the Mojave Desert did not occur until the Old Woman Mountains boom of 1898-1901 (Gallegos et al. 1980:133).

In the mid-19th century, a few new trails were developed on the basis of the Old Spanish Trail, such as the Mormon Trail and the Mojave Road, by which many of the legendary wagon trains from the eastern U.S. entered California. Since the 1870s, the Mojave Desert has seen the establishment of a number of modern transportation thoroughfares across its vast reaches, including the Southern Pacific, the Santa Fe, and the Union Pacific Railroads; the fabled U.S. Route 66; and today's Interstate Highways 15 and 40. Several urban centers have gradually emerged along these arteries, mostly along the western and southern rims of the Mojave Desert. The bulk of the region, however, remains sparsely populated and rarely touched by human activities, even to the present time.

Although ranchers and miners began to arrive in the area in the late 1800s, the modern-day community of Joshua Tree traces its roots to the Desert Queen Ranch, which was founded in 1918 by William Keys and his wife Frances M. Lawton and is now known as Keys Ranch in the boundaries of the Joshua Tree National Park (Joshua Tree Village n.d.). Homesteaders began settling the area in earnest in the 1930s, and it was also at that time that the Joshua Tree National Monument was established (NPS n.d.). Minerva Hoyt, a Pasadena resident and desert plant aficionado, became concerned about the removal of cacti and other plants to the gardens of Los Angeles, and her efforts to protect the area culminated in 825,000 acres being set aside as Joshua Tree National Monument in 1936 (*ibid.*). The area sees millions of visitors annually, but the year-round population of this rural desert community was just under 7,000 as of 2018 (USCB n.d.).

RESEARCH METHODS

RECORDS SEARCH

Due to facility closure during the COVID-19 pandemic and the resulting delays, a records search for this study could not be obtained in time from the South Central Coastal Information Center (SCCIC), California State University, Fullerton, which is the State of California's official cultural resource records repository for the County of San Bernardino. Instead, the results of a previous records search that was focused on a property located a half-mile to the east of the project area, on the north side of Twentynine Palms Highway, were reviewed for information pertaining to the current project area.

The prior records search was conducted on January 16 and February 26, 2019, by CRM TECH archaeologist Ben Kerridge, who examined maps and records on file at the SCCIC for previously identified cultural resources and existing cultural resources reports within a one-mile radius of that

location. Previously identified cultural resources include properties designated as California Historical Landmarks, Points of Historical Interest, or San Bernardino County Historical Landmarks as well as those listed in the National Register of Historic Places, the California Register of Historical Resources, or the California Historical Resources Inventory.

SACRED LANDS FILE SEARCH

On February 2, 2021, CRM TECH submitted a written request to the State of California Native American Heritage Commission (NAHC) for a records search in the commission's Sacred Lands File. The NAHC is the State of California's trustee agency for the protection of "tribal cultural resources," as defined by California Public Resources Code §21074, and is tasked with identifying and cataloging properties of Native American cultural value throughout the state, including places of special religious, spiritual, or social significance and known graves and cemeteries. As an additional effort to incorporate Native American input, CRM TECH also corresponded with the nearby Twentynine Palms Band of Mission Indians on February 2-8, 2021, to notify the tribe of the upcoming archaeological field survey and coordinate tribal participation (see below).

HISTORICAL RESEARCH

Historical background research for this study was conducted by CRM TECH principal investigator/historian Bai "Tom" Tang. Sources consulted during the research included published literature in local history as well as historical maps and aerial photographs of the project vicinity. Among the maps consulted for this study were the U.S. General Land Office's (GLO) land survey plat maps dated 1856 and the U.S. Geological Survey's (USGS) topographic maps dated 1955-1994, which are available at the websites of the U.S. Bureau of Land Management and the USGS. The aerial photographs, taken in 1970-2019, are accessed at the Nationwide Environmental Title Research (NETR) Online website and through the Google Earth software.

FIELD SURVEY

On February 12, 2021, CRM TECH archaeologists Nina Gallardo and Hunter O'Donnell carried out the field survey of the project area with the assistance of cultural resources specialist Kelsey Bosch from the Twentynine Palms Band of Mission Indians. The survey was completed at an intensive level by walking a series of parallel north-south transects spaced 15 meters (approximately 50 feet) apart. In this way, the ground surface in the entire project area was systematically and carefully examined for any evidence of human activities dating to the prehistoric or historic period (i.e., 50 years ago or older). Ground visibility was good (80-85%) throughout the project area despite the light vegetation growth.

RESULTS AND FINDINGS

RECORDS SEARCH

The records search results indicate that the project area had not been surveyed for cultural resources as of 2019, and no cultural resources had been recorded within project boundaries. Within the half-mile radius of the current project area, SCCIC records identify four previous studies carried out

between 1977 and 2009 on various tracts of land and linear features, including two linear surveys adjacent to the southern project boundary along Twentynine Palms Highway (Fig. 5). These and other similar studies in the vicinity resulted in the recordation of 28 historical/archaeological resources within the half-mile radius. All of these known cultural resources dated to the historic period, and no prehistoric—i.e., Native American—resources were previously found within the scope of the records search for this study.

Nearest to the project area, the roads outside but adjacent to the southern and eastern project boundaries had been previously recorded as Sites 36-010525 and 36-024673 in the California Historical Resources Inventory, respectively. Site 36-010525 (CA-SBR-10525H) represents a segment of what is now Twentynine Palms Highway, which was built mostly after World War II (Purcell 2000). Site 36-024673 represents a segment of Sunset Road, a two-lane paved road, which is known to have been present by the 1950s (Kremkau 2011).

The other 26 previously identified cultural resources within the records search scope included eight additional roads, 17 buildings, the Joshua Tree commercial district, and one piece of folk art, namely a large outdoor turtle sculpture. The buildings were predominantly commercial in nature and dated from the late 1930s to the early 1960s. None of these localities were identified within the project area, and none will be impacted by the proposed project. Therefore, none of them require further consideration during this study.

SACRED LANDS FILE SEARCH

In response to CRM TECH's inquiry, the NAHC reports in a letter dated February 17, 2021, that Sacred Lands File identified no Native American cultural resources in the project vicinity. Noting that the absence of specific information does not necessarily indicate the absence of such resources, however, the NAHC recommends that local Native American groups be consulted for further information and provided a referral list of potential contacts. The NAHC's reply is attached to this report in Appendix 2 for reference by the County of San Bernardino in future government-to-government consultations with the pertinent tribal groups, if necessary.

HISTORICAL RESEARCH

Despite its location near the commercial center of the community of Joshua Tree, historic maps consulted for this study suggest that the project area is relatively low in sensitivity for cultural resources from the historic period (Figs. 6-8). In the 1850s-1860s, when the U.S. government conducted the earliest systematic land surveys in the Mojave Desert, no man-made features of any kind were observed in or near the project area (Fig. 6). The community of Joshua Tree developed gradually and largely organically after 1911 as homesteaders trickled to the area, and the pace accelerated during the post-WWII "baby homestead rush" (Garrett 1992:35-36).

By 1952, the town of Joshua Tree had grown almost to its present-day extent, although not to the same level of density, and both Twentynine Palms Highway and Sunset Road were in place along the project boundaries, with the pace of development continuing through the next two decades (Figs. 7, 8). Despite these developments nearby, and despite various buildings constructed on adjacent properties over the years, the project area itself has evidently remained entirely vacant and

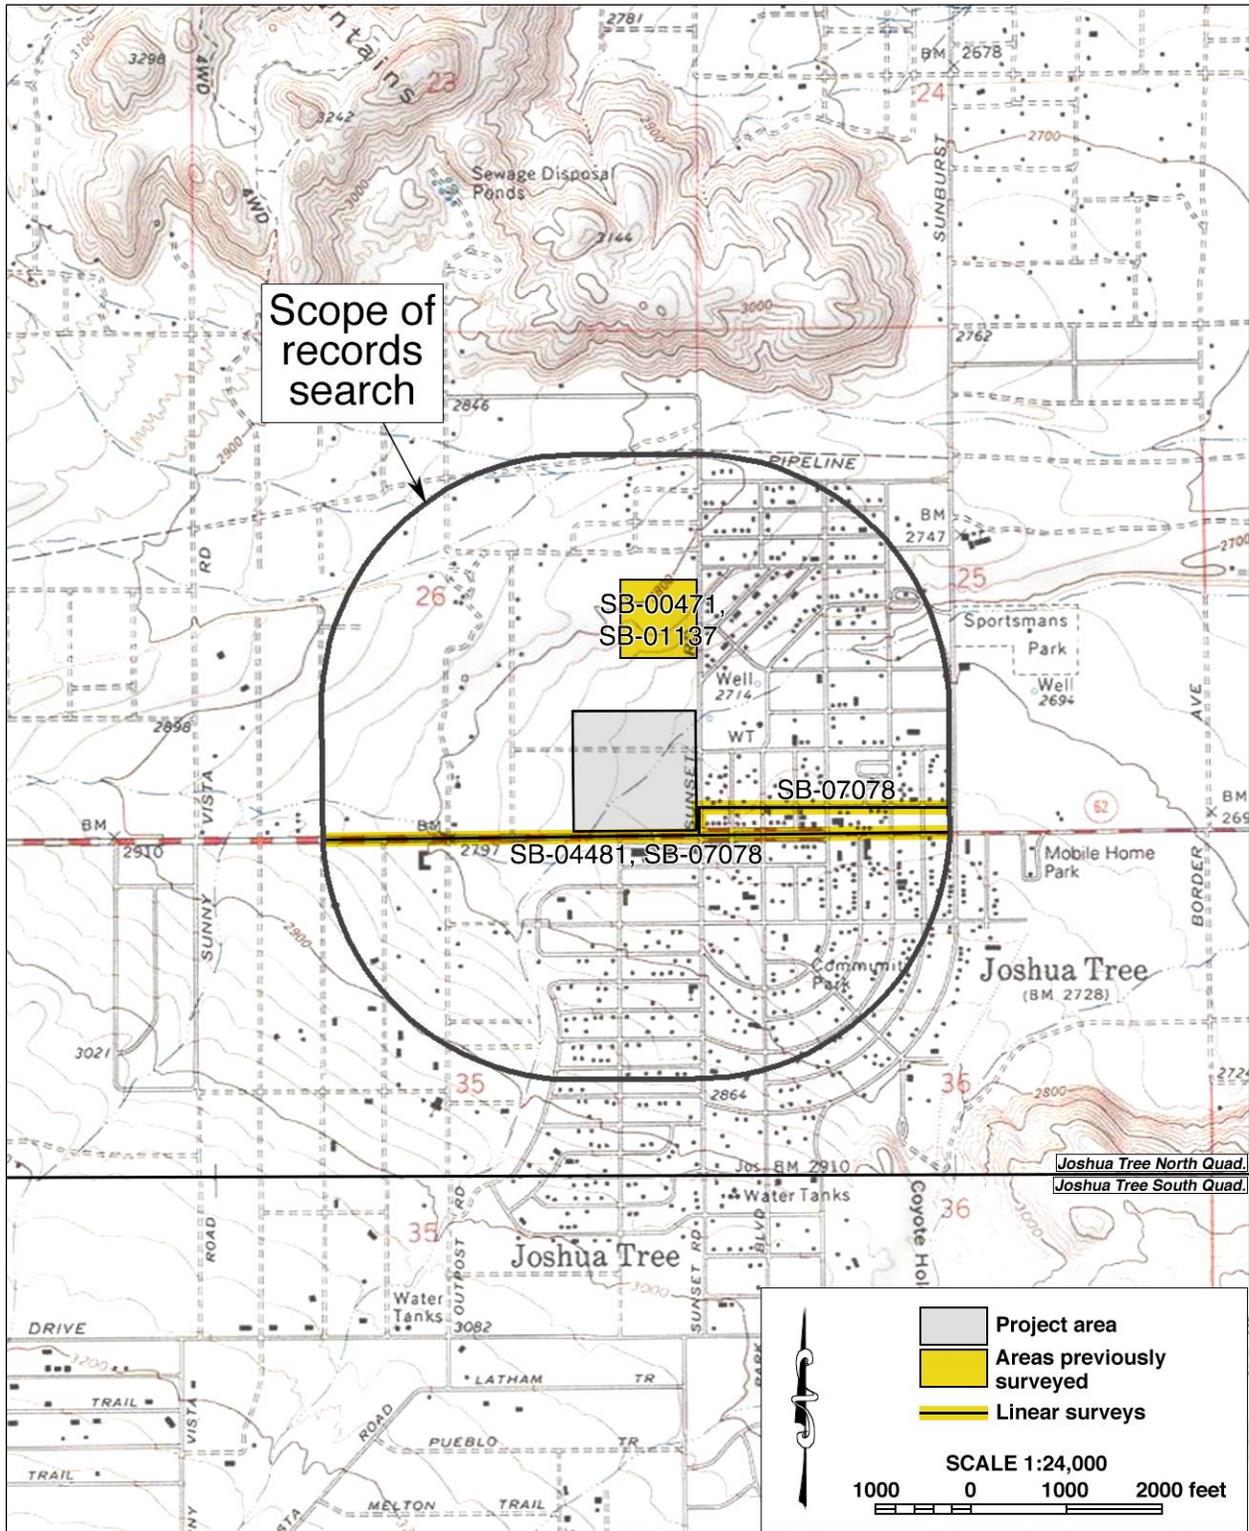

Figure 5. Previous cultural resources studies within a half-mile radius of the project area. Location of historical/ archaeological resources are not shown as a protective measure.

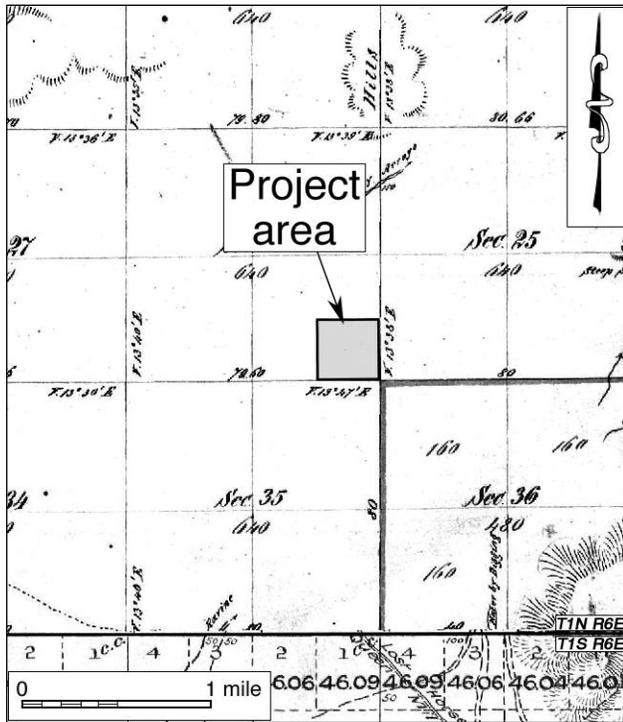

Figure 6. The project area and vicinity in 1855-1856. (Source: GLO 1856a; 1856b)

undeveloped to the present time (Fig. 2; NETR Online 1970-2016; Google Earth 1989-2019).

FIELD SURVEY

The intensive-level field survey produced a negative finding for potential “historical resources,” and no buildings, structures, objects, sites, features, or artifacts of prehistoric or historical origin were encountered. Portions of the project area demonstrate signs of past ground disturbance, especially along the drainages, dirt roads, and the existing roadways adjacent to the property. Much refuse was observed on the property, primarily construction and landscaping waste, but all of the items appear to be of modern origin, and none of them are of any historical/archaeological interest. A chunk of obsidian discarded amid landscaping debris exhibits a worked surface, but the markings are clearly recent in origin.

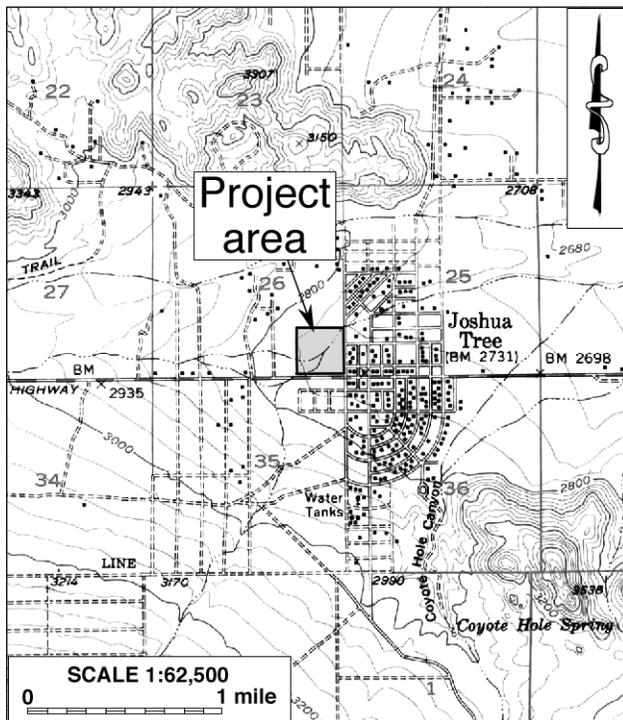

Figure 7. The project area and vicinity in 1952. (Source: USGS 1955)

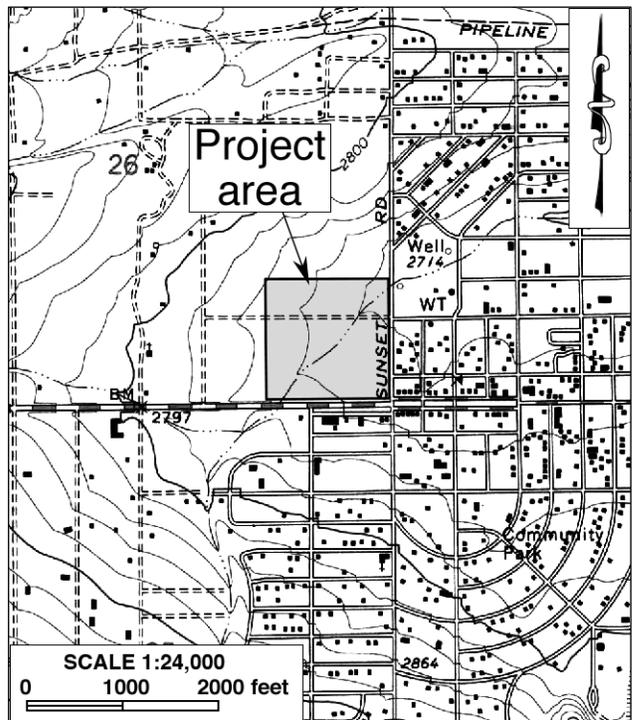

Figure 8. The project area and vicinity in 1970-1972-1972. (Source: USGS 1972)

DISCUSSION

The purpose of this study is to identify any cultural resources within the project area, and to assist the County of San Bernardino in determining whether such resources meet the official definition of “historical resources,” as provided in the California Public Resources Code, in particular CEQA. According to PRC §5020.1(j), “‘historical resource’ includes, but is not limited to, any object, building, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California.”

More specifically, CEQA guidelines state that the term “historical resources” applies to any such resources listed in or determined to be eligible for listing in the California Register of Historical Resources, included in a local register of historical resources, or determined to be historically significant by the lead agency (Title 14 CCR §15064.5(a)(1)-(3)). Regarding the proper criteria for the evaluation of historical significance, CEQA guidelines mandate that “generally a resource shall be considered by the lead agency to be ‘historically significant’ if the resource meets the criteria for listing on the California Register of Historical Resources” (Title 14 CCR §15064.5(a)(3)). A resource may be listed in the California Register if it meets any of the following criteria:

- (1) Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.
- (2) Is associated with the lives of persons important in our past.
- (3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- (4) Has yielded, or may be likely to yield, information important in prehistory or history. (PRC §5024.1(c))

In summary of the research results presented above, no potential “historical resources” were previously recorded within the project area, and none were found during the present survey. In addition, no notable cultural features were known to be present within the project area throughout the historic period. While Twentynine Palms Highway and Sunset Road, located adjacent to the southern and eastern project boundaries respectively, both date to the late historic period and were previously recorded as Sites 36-010525 and 36-024673, at this location both are essentially modern infrastructure elements that retain no historical characteristics to relate to the pre-modern era. Located outside of project boundaries, neither is likely to receive any impact from the proposed project. Therefore, they require no further consideration in this study.

CONCLUSION AND RECOMMENDATIONS

CEQA establishes that “a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment” (PRC §21084.1). “Substantial adverse change,” according to PRC §5020.1(q), “means demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired.” The results of the present study have established that no “historical resources,” as defined by CEQA and associated regulations, are present within the project area. Therefore, CRM TECH presents the following recommendations to the County of San Bernardino:

- The proposed project will not cause a substantial adverse change to any known “historical resources.”
- No further cultural resources investigation will be necessary for the project unless development plans undergo such changes as to include areas not covered by this study.
- If any buried cultural materials are encountered during earth-moving operations associated with the project, all work within 50 feet of the discovery should be halted or diverted until a qualified archaeologist can evaluate the nature and significance of the finds.

- 1985-1986 Teaching Assistant, Modern Chinese History, Yale University.
- 1982-1985 Lecturer, History, Xi’an Foreign Languages Institute, Xi’an, China.

Cultural Resources Management Reports

Preliminary Analyses and Recommendations Regarding California’s Cultural Resources Inventory System (with Special Reference to Condition 14 of NPS 1990 Program Review Report). California State Office of Historic Preservation working paper, Sacramento, September 1990.

Numerous cultural resources management reports with the Archaeological Research Unit, Greenwood and Associates, and CRM TECH, since October 1991.

PRINCIPAL INVESTIGATOR/ARCHAEOLOGIST
Michael Hogan, Ph.D., RPA (Registered Professional Archaeologist)

Education

- 1991 Ph.D., Anthropology, University of California, Riverside.
1981 B.S., Anthropology, University of California, Riverside; with honors.
1980-1981 Education Abroad Program, Lima, Peru.
- 2002 “Section 106—National Historic Preservation Act: Federal Law at the Local Level,”
UCLA Extension Course #888.
2002 “Recognizing Historic Artifacts,” workshop presented by Richard Norwood,
Historical Archaeologist.
2002 “Wending Your Way through the Regulatory Maze,” symposium presented by the
Association of Environmental Professionals.
1992 “Southern California Ceramics Workshop,” presented by Jerry Schaefer.
1992 “Historic Artifact Workshop,” presented by Anne Duffield-Stoll.

Professional Experience

- 2002- Principal Investigator, CRM TECH, Riverside/Colton, California.
1999-2002 Project Archaeologist/Field Director, CRM TECH, Riverside, California.
1996-1998 Project Director and Ethnographer, Statistical Research, Inc., Redlands, California.
1992-1998 Assistant Research Anthropologist, University of California, Riverside.
1992-1995 Project Director, Archaeological Research Unit, U.C. Riverside.
1993-1994 Adjunct Professor, Riverside Community College, Mt. San Jacinto College, U.C.
Riverside, Chapman University, and San Bernardino Valley College.
1991-1992 Crew Chief, Archaeological Research Unit, U.C. Riverside.
1984-1998 Project Director, Field Director, Crew Chief, and Archaeological Technician for
various southern California cultural resources management firms.

Research Interests

Cultural Resource Management, Southern Californian Archaeology, Settlement and Exchange
Patterns, Specialization and Stratification, Culture Change, Native American Culture, Cultural
Diversity.

Cultural Resources Management Reports

Principal investigator for, author or co-author of, and contributor to numerous cultural resources
management study reports since 1986.

Memberships

Society for American Archaeology; Society for California Archaeology; Pacific Coast
Archaeological Society; Coachella Valley Archaeological Society.

PROJECT ARCHAEOLOGIST/REPORT WRITER
Deirdre Encarnación, M.A.

Education

- 2003 M.A., Anthropology, San Diego State University, California.
2000 B.A., Anthropology, minor in Biology, with honors; San Diego State University, California.

Professional Experience

- 2017- Project Archaeologist, CRM TECH, Colton, California.
2016-2018 Graduate Research Assistant, Applied Archaeology, California State University, San Bernardino.
2016-2017 Cultural Intern, Cultural Department, Pechanga Band of Luiseño Indians, Temecula, California.
2015 Archaeological Intern, U.S. Bureau of Land Management, Barstow, California.
2015 Peer Research Consultant: African Archaeology, California State University, San Bernardino.

APPENDIX 2

SACRED LANDS FILE SEARCH RESULTS

NATIVE AMERICAN HERITAGE COMMISSION

February 17, 2021

Nina Gallardo
CRM TECH

Via Email to: ngallardo@crmtech.us

Re: Proposed Joshua Tree Hotel Project, San Bernardino County

Dear Ms. Gallardo:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

EXECUTIVE SUMMARY

Alta Environmental DBA NV5 (NV5) has completed a Phase I Environmental Site Assessment (ESA) of the property located at the northwestern corner of the intersection of Twentynine Palms Highway and Sunset Road, in Joshua Tree, San Bernardino County, California (Site). The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or adjacent to the Site. If identified, these issues are considered recognized environmental conditions (RECs).

Site and Vicinity Description

The Site is located on the northwestern intersection of Twentynine Palms Highway and Sunset Road in Joshua Tree, San Bernardino County, California. The Site consists of one parcel of vacant land which is approximately 37.57 acres in size. The Site can be identified by San Bernardino County Tax Assessor Parcel Number (APN): 0602-371-06. At the time of our Site reconnaissance, the Site was vacant, undeveloped land.

The Site is located within an area primarily comprised of mixed residential and commercial use. Current uses of adjoining properties include a residential community and vacant land to the north; the Joshua Tree Brewery and several vacant residential homes to the east; Twentynine Palms Highway followed by several commercial retail and restaurant business to the south; and a residential apartment complex and vacant land to the west.

Site Use and History

The Site has been undeveloped as early as 1948.

Data Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. No data gaps were identified by NV5 during this assessment.

Vapor Encroachment Conditions (VEC)

A Tier 1 vapor encroachment screen (VES) for potential chemicals of concern (COC) was completed for the Site. The assessment was based on the ASTM published Standard Guide E 2600-15. The purpose of the VES was to evaluate for the potential for a vapor encroachment condition (VEC) which is the presence or likely presence of COC vapors in subsurface soils at the Site caused by the release of vapors from contaminated soil or groundwater on or near the Site. The results of the VES did not identify evidence of a potential VEC in connection with the Site.

Conclusions and Recommendations

No evidence of a Controlled REC, historic REC, REC, or VEC in connection with the Site was identified during this assessment.

Recommendations

No further assessment is recommended.

1 INTRODUCTION

Alta Environmental DBA NV5 (NV5) has completed a Phase I Environmental Site Assessment (ESA) of the property located at the northwestern intersection of Twentynine Palms Highway and Sunset Road in Joshua Tree, San Bernardino County, California (Site). The purpose of this assessment was to evaluate the environmental condition of the Site and to satisfy one of the requirements for qualification under the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses under the federal Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in:

1. 42 U.S.C § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13;
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312); and
3. 42 U.S.C. 9601(40) and 42 U.S.C. 9607(q).

This report was prepared exclusively for use by Pacific Transwest Realty (Client). This report may not be relied upon by any other person or entity without NV5’s express written permission. The information, conclusions and recommendations described in this report apply to conditions existing at certain locations when services were performed and are intended only for the specific purposes, locations, time frames and project parameters indicated. NV5 cannot be responsible for the impact of any changes in environmental standards, practices, or regulations after performance of services.

1.1 Objectives

NV5’s objective for this environmental assessment was to identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or to the Site. The assessment was conducted to meet the standards of ASTM Standard Practice E1527-13.

The conclusions and recommendations provided herein are based on the following:

1. Current and past Site uses and occupancies;
2. Current and past uses of hazardous substances;
3. Waste management and disposal activities that could have caused releases or threatened releases of hazardous substances;
4. Current and past corrective actions and response activities undertaken to address past and on-going releases of hazardous substances;
5. Engineering controls;
6. Institutional controls; and
7. Evaluation of properties adjoining or located nearby the Site that have environmental conditions that could have resulted in conditions indicative of releases or threatened releases of hazardous substances to the Site.

1.2 Services

NV5 performed the following services to assess the Site:

1. Reviewed historical sources of information;
2. Searched for recorded environmental clean-up liens;
3. Reviewed Federal, State, Tribal, and local government records;
4. Visually inspected the Site and the adjoining properties;
5. Evaluated any specialized knowledge or experience on the part of the purchaser; and
6. Determined commonly known or reasonably ascertainable information about the Site.

1.3 Assumptions

NV5 has assumed the following for the purposes of this assessment:

1. Information provided during any interview (written or oral) was accurate and correct;
2. Database information reviewed was accurate and correct;
3. Historical information reviewed was accurate and correct;
4. Information reviewed at any governmental agency was accurate and correct;
5. Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey (USGS) Topographic Maps; and
6. The Site has been correctly and accurately identified by the client, client representatives, Site contact, Site owner, and/or Site representatives.

1.4 Limitations

This assessment is limited to the standards set forth in ASTM Standard Practice E1527-13. This assessment specifically excludes assessment of the following:

1. Asbestos and asbestos-containing building materials;
2. Biological agents;
3. Cultural and historic resources;
4. Ecological resources;
5. Endangered species;
6. Health and safety;
7. Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment;
8. Industrial hygiene;
9. Lead-Based Paint;
10. Lead in Drinking Water;
11. Mold;
12. Radon;
13. Regulatory compliance; and
14. Wetlands.

Please note that considerations identified by ASTM as beyond the scope of a Phase I Environmental Site Assessment (ESA) may still affect business environmental risk at a given property. These environmental issues or conditions may warrant assessment based on the type of property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13 and not included in this assessment.

The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluation. The conclusions presented in this report are based solely on the services described herein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No subsurface exploratory drilling or sampling of any kind was conducted under the scope of this work. Unless specifically stated otherwise in the report, no chemical or physical analyses have been performed during the performance of this Phase I ESA.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This information is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted. As applicable, NV5 has relied in good faith upon representations and information furnished by individuals with respect to operations and existing property conditions, to the extent that they have not been contradicted by data obtained from other sources. Accordingly, NV5 accepts no responsibility for any deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented in this study apply strictly to the environmental regulations and property conditions existing at the time the study was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the Site. NV5 makes no warranty, express or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the study.

This Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of hazardous substances or petroleum products that may affect the Site. The assessment is not intended to assure clear title to the Site in question. The sole purpose of investigation into Site title records is to ascertain a historical basis of prior land use and environmental liens. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the Site visit. Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

1.5 Terms

The following terms are used in this report:

- “Site” refers to the property within the approximate boundaries described in Section 2;
- “Adjoining property” refers to properties adjacent to the Site that share a common boundary with the Site; and
- “Site vicinity” refers to the area within an approximate 1-mile radius of the Site.
- “Recognized Environmental Conditions” (RECs) – The presence or likely presence of any *hazardous substances* or *petroleum products* in, on, at or to the Site: (1) due to release to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*.
- “Controlled Recognized Environmental Condition” (CREC) – A recognized environmental condition resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions*, *activity and use limitations*, *institutional controls*, or *engineering controls*). A condition identified as a *controlled recognized environmental condition* does not imply that the *environmental professional* has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.
- “Historical Recognized Environmental Condition” (HREC) – A past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the Site and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Site to any required controls (for example, Site use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).
- “Migrate/migration” – For the purposes of this practice, “migrate” and “migration” refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

- “Hazardous Substances” – The term “hazardous substance” is used here in general accordance with its use as defined in the following regulations:
 - Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended; and
 - Superfund Amendment and Reauthorization Act (SARA) of 1986, as amended.

The words “impact” or “impacted” are used to mean the effect or result of a release of a hazardous substance or petroleum product at the Site. Search distances for government agency lists were those designated by the ASTM Standard E 1527-13.

1.6 Environmental Professionals

This document has been prepared by an Environmental Professional as defined by the EPA, 40 CFR Part 312.10. All work performed for this assessment was performed by or under the direct supervision of an Environmental Professional.

2 SITE DESCRIPTION

Mr. Adrian Hernandez Lopez, of NV5, conducted a Site reconnaissance on May 21, 2021. The descriptions provided herein are based on information provided by the current Site representatives and on observations made during that visit. Representative Site photographs are included in Appendix A. Site Location and Site Layout maps depicting the areas and features described in the following sections are also provided in Figures 1 and 2.

2.1 Site Location and Use

2.1.1 Location and Description

The Site is located on the northwestern intersection of Twentynine Palms Highway and Sunset Road in Joshua Tree, San Bernardino County, California. The Site consists of one parcel of vacant land which is approximately 37.57 acres in size. The Site can be identified by San Bernardino County Tax Assessor Parcel Number (APN): 0602-371-06.

2.1.2 Development and Current Use

At the time of our Site reconnaissance, the Site was a vacant and undeveloped lot.

2.2 Utility Service Providers

No active utility services were observed or reported at the Site. Signage for subterranean utility lines (fire hydrant, natural gas, etc.) along with overhead electrical lines were observed along the Site perimeter.

2.3 Chemical and Petroleum Storage Areas

No chemical or petroleum storage areas were observed or reported during the Site reconnaissance.

2.3.1 Drums

No drum storage areas were observed or reported at the Site during the Site reconnaissance.

2.4 Storage Tanks

2.4.1 Aboveground Storage Tanks (ASTs)

No evidence of ASTs at the Site was observed or reported during the Site reconnaissance.

2.4.2 Underground Storage Tanks (USTs)

No evidence of USTs at the Site was observed or reported during the Site reconnaissance.

2.4.3 Septic Tanks

No septic tanks were observed or reported to be present at the Site during the Site reconnaissance.

2.5 Polychlorinated Biphenyls

No evidence of transformers or other PCB-containing equipment was observed at the Site during the Site reconnaissance.

2.6 Floor Drains, Sumps, and Clarifiers

No evidence of floor drains, sumps or clarifiers was observed or reported at the Site during the reconnaissance.

2.7 Back-up Power Generation

No fixed back-up power generators were observed or reported to be on the Site.

2.8 Cooling Towers

No cooling towers were observed or reported to be on the Site.

2.9 Elevators, Lifts and Compactors

No elevators, lifts, or compactors were observed or reported to be on the Site.

2.10 Odors

No strong, pungent, or noxious odors indicative of a past release of hazardous substances or petroleum products were identified during the course of this assessment.

2.11 Pools of Liquid

No standing surface water or other pits, ponds, or lagoons potentially containing hazardous substances or petroleum products were identified within the Site.

2.12 Surface Staining

No surface staining indicative of a past release of hazardous substances or petroleum products was identified during the course of this assessment.

2.13 Stressed Vegetation

No significantly stressed vegetation or other indications of potential release of hazardous substances or petroleum products were observed during the Site reconnaissance.

2.14 Solid Waste

No evidence of illicit storage or dumping of solid wastes at the Site was observed during the Site reconnaissance. Small amount of wind-blown trash or litter was observed throughout the Site and along the Site perimeter. Based on the nature of these wastes, they are not considered to represent an REC.

2.15 Adjacent Properties

The Site is located within an area of mixed commercial and residential use. The following land use in the near vicinity of the Site was observed:

Direction	Property Name	Property Address	Business Operation
North	Residential Homes	6271 Sunset Road	Residential Homes and Vacant Land.
West	Yucca Trails Apartments	6333 Hallee Road	Residential Apartments
South	Various Retail and Restaurant Properties	61325-61695 Twentynine Palms Highway	Retail, Restaurant, and Self-Storage
East	Joshua Tree Brewery	6393 Sunset Road	Brewery
	Professional Service Unlimited	6415 Sunset Road	Commercial Building
	Vacant Residential Buildings	Sunset Road	Vacant Residential

3 SITE SETTING

3.1 Topographic

The 2012 United States Geological Survey (USGS), [Joshua Tree North] 7.5 Minute Topographic Quadrangle (Topo) map of the Site and surrounding vicinity was reviewed. The elevation of the Site is 2,736 feet above mean sea level. Based on a review of information included in the EDR Radius Report, the site and surrounding topography is generally flat with a downgradient slope towards the east southeast (EDR, 2021). A copy of the USGS 7.5 Minute Topo map is included in Appendix B.

3.2 Regional Geology and Hydrology

The following description of regional geology and hydrology was developed based on regional information presented on the EDR GeoCheck report (2021) and Regional Water Quality Control Board's online *Geotracker* database.

According to United States Department of Agriculture (USDA) soil data published in the EDR GeoCheck report, soils underlying the Site are classified as *Hanford*. Soils of this type consist of coarse sandy loam that are well drained with moderate infiltration rates (Appendix B).

NV5 reviewed groundwater data published on the *Geotracker* database for a former leaking underground storage tank (LUST) investigation for a property located at 56888 Twenty-Nine Palms Highway in Yucca Valley, California (approximately 5 miles west of the Site). Based on a review of published groundwater monitoring data collected in 2003, the shallowest groundwater is reported to be present at depths of approximately 200 to 300 feet below ground surface and flows towards the east.

Flood Plain

According to Federal Emergency Management Agency flood plain data presented in the site-specific Environmental Data Resources (EDR) Geocheck Report, the Site is located within a 100-year but not a 500-year flood zone (EDR, 2021). The EDR Report is presented as Appendix B.

3.3 Wetlands

According to map data published on the United States Department of Fish and Wildlife (USFW) National Wetlands Inventory (<https://www.fws.gov/wetlands/data/mapper.html>), a Riverine habitat (R4SBJ) is mapped across the site. A screenshot is provided in Appendix C.

3.4 Water Bodies

No water bodies were observed on the Site however several streams are shown across the Site on Topo maps.

3.5 Oil and Gas Wells

According to the State of California, Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System (DOMS), no oil/gas wells were identified on the Site or adjoining properties (Appendix C).

4 USER-PROVIDED INFORMATION

Information obtained during the interview process is presented in the following sections.

4.1 Title Records

Title records were not provided by the Site user representative. However, the EDR Lien and AUL Search report presented copies of the deeds for the Site, as summarized below.

APN	Title Vested In	Title Received From	Deed Dated
0602-371-06-0000	One Tree Hill, LP	Demetrius and Tamara Stasiuk Trustees	3/10/2021

Appendix D presents the EDR Lien and AUL report.

4.2 Clean-Up Liens

No knowledge of any clean-up liens against the Site was reported by those interviewed. Furthermore, the EDR Environmental Lien and AUL Search report did not identify any environmental liens for the Site (Appendix D).

4.3 Activities and Use Limitations

No knowledge of site-specific activities or use limitations recorded against the Site were reported by those interviewed. Furthermore, according to the EDR Lien and AUL Search report, no Activity and Use Limitations are identified for the Site (Appendix D).

4.4 Specialized Knowledge

No specialized knowledge identifying evidence of a recognized environmental conditions was disclosed by those interviewed during this assessment.

4.5 Commonly Known Information

No commonly known information identifying evidence of a recognized environmental condition was disclosed by those interviewed during this assessment.

4.6 Previous Environmental Assessments

No previous environmental assessment reports for the Site were provided to NV5 for review.

5 RECORDS REVIEW

5.1 Governmental Databases

NV5 contracted EDR to perform a radius search of governmental databases for this project. The distribution of listed sites with respect to the Site is tabulated and mapped in EDR's Radius Map Report, which can be found in Appendix B. The reader is referred to the table, which can be found near the front of EDR's report.

NV5 conducted a review of the above-referenced database reports and provides the following findings based on sites that have the potential to impact the Site, with respect to the inferred southerly groundwater flow direction. Our findings are based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within unsaturated soil for a significant distance. Although a hazardous substance or petroleum product can migrate in groundwater in a generally down-gradient direction, there are limitations to this interpretation such as groundwater depth, soil lithology and other subsurface barriers.

5.1.1 Site Database Findings

EDR's report did not identify database listings for the Site. A listing for a facility (SCE Joshua Tree Substation) located at the northwest corner of Park Boulevard and Commercial Street was incorrectly mapped at the Site address but is actually located over 500 feet east of the Site.

5.1.2 Adjoining Property Database Findings

EDR's report did not identify database listings for the adjoining properties.

5.1.3 General Vicinity Database Findings

EDR's report identified multiple off-Site facilities within applicable ASTM search radii. NV5 considered all of the listed sites unlikely to impact the Site, based upon factors including (but not limited to):

- The nature of the listing;
- The use of the site;
- When the site was listed and its current listed status;
- The developmental density of the setting;
- The distance between the listed sites and the Site as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions;
- The presence of intervening drainage divides; and/or
- The inferred groundwater movement.

5.2 Regional Agency Offices

NV5 submitted information requests to the various county and regional agencies that may have records with regard to environmentally-oriented concerns affecting the Site, in accordance with ASTM E1527-13 requirements. Should significant records be identified at a later date, an addendum to this report will be issued. Documentation obtained from regulatory agency requests is presented in Appendix C.

Agency	Records Summary
California Geologic Energy Management Division (CalGEM)	No oil or gas wells were identified on the Site or adjoining properties.
Regional Water Quality Control Board – GEOTRACKER	<p data-bbox="678 1772 743 1824"><u>Site</u> None</p> <p data-bbox="678 1860 922 1913"><u>Adjoining Properties</u> None</p>

Agency	Records Summary
Department of Toxic Substances Control – ENVIROSTOR	<u>Site</u> None <u>Adjoining Properties</u> None
San Bernardino County Fire Department	No records were identified for the Site

5.3 Historical Records

NV5 used USGS Topo maps, aerial photographs, fire insurance maps, and historical street directories to provide information about the history of the Site and its surroundings. The resources NV5 reviewed are tabulated below and presented in Appendix E.

Historical Resources		
Source Type	Years Reviewed	Source
USGS Topo Maps	1955, 1972, 1978, 1994, and 2012	USGS/EDR
Aerial Photograph(s)	1948, 1952, 1970, 1975, 1983, 1989, 1994, 2005, 2009, 2012, and 2016	EDR
Fire Insurance (Sanborn) Maps	No Coverage Letter	EDR
Street Directories	1971, 1976, 1980, 1985, 1992, 1995, 2000, 2005, 2010, 2014, and 2017	EDR

5.4 Past Uses – Site

Our interpretation of past uses of the Site, based on the historical data sources listed above, are tabulated below.

Date	Interpreted Property Use
1948 to 2016	Topo maps and aerial photographs depict the Site to be undeveloped vacant land.

5.5 Past Uses – Adjoining Properties

Our interpretation of past uses of the adjoining properties, based on the historical data sources listed above, are tabulated below.

Date	Description
Northern Adjoining Property	
1948 to 1983	Topo maps and aerial photographs depict the property to be undeveloped vacant land.

Date	Description
1989 to 2016.	Topo maps and aerial photographs depict the property to be undeveloped vacant land with the exception of a small housing development located along Sunset Road. Historical city directories do not list the property addresses.
Southern Adjoining Property	
1948 to 1952	Topo maps and aerial photographs depict the property to be developed with Twenty-Nine Palms Highway followed by undeveloped vacant land.
1970 to 2016	Topo maps and aerial photographs depict the property to be developed with Twenty-Nine Palms Highway followed by several commercial structures. Historical city directories identified the tenants of the properties as various professional service providers, retail stores, and restaurants.
Eastern Adjoining Property	
1948 to 2016	Topo maps and aerial photographs depict the property to be developed with Sunset Road followed by several commercial structures. City directories identified the past tenants of the property to be various residential tenants with the exception of the following. 6393 Sunset Road: <ul style="list-style-type: none"> • San Bernardino County Mental Health (1992) • Morongo Basin Counseling (1995) • SOS Training Center (2005) • Healthcare Providers EDU Center (2010) • Legal Document Service (2010 and 2017) • Mallants Group (2010) • Mojave Desert Land Trust (2010) • Signagraphics (2010) 6415 Sunset Road: <ul style="list-style-type: none"> • Transwestern Publishing (2005)
Western Adjoining Property	
1948 to 1983	Topo maps and aerial photographs depict the property to be undeveloped vacant land.
1989 to 2016.	Topo maps and aerial photographs depict the property to be undeveloped vacant land with the exception of an apartment complex located along Verbena Road. The apartment complex address was not listed in the reviewed city directories.

5.6 Interviews

NV5 interviewed parties potentially having information about current and/or former conditions at the Site. The parties and their affiliation are tabulated below.

Interviews		
Name	Affiliation	Role
Mr. Eric Kleinbub	Pacific Transwest Realty/One Tree Hill, LP	Site Owner/Client/User

Mr. Kleinbub indicated that he was unaware of any USTs, wells, hazardous materials, or petroleum products at the Site and that he was unaware of any known environmental impact or past environmental remediation at the Site.

6 NON-SCOPE CONSIDERATIONS

Per the authorized scope of work, items beyond the scope of ASTM E-1527-13 were not addressed as part of this assessment.

7 VAPOR ENCROACHMENT SCREENING

ASTM E1527-13 requires the Environmental Professional to evaluate the potential for vapor encroachment of chemicals of concern (COC) onto the Site, and to determine if such vapor encroachment constitutes evidence of a REC on the Site. The E1527-13 Standard Practice does not specifically state the methods that must be used to screen for potential vapor encroachment issues. However, ASTM has developed a separate Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM E2600-15), which outlines an ASTM E1527-13-compliant methodology to conduct vapor encroachment screening that was used for this assessment as described below.

7.1 VES Methodology

The goal of conducting Vapor Encroachment Screening (VES) is to identify a vapor encroachment condition (VEC), which is defined as the presence or likely presence of chemicals of concern (COC) vapors in the vadose zone of the Site caused by the release of vapors from contaminated soil and/or groundwater either on or near the Site. If a VEC is identified, the Environmental Professional must determine whether the VEC represents evidence of a REC on the Site under the context of the Phase I ESA Standard Practice. It should be noted that the identification of a VEC on the Site does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Site is likely. The Environmental Professional will identify the VEC as a REC where the potential for vapor migration into structures is considered likely, or where the contaminant concentrations in the soil, groundwater, or soil vapors on the Site are significant and likely to result in enforcement against on-site or off-site responsible parties.

The VES utilizes information regarding the potential presence of releases on or near the Site that were collected as a normal part of the Phase I ESA process, such as governmental database records, review of governmental files, historical data sources, etc. The VES Standard Guide requires the Environmental Professional to search for potential sites of concern within specific search radii. The area of concern search radius is 1,760 feet (1/3 mile) for non-petroleum-impacted sites and 528 feet (1/10 miles) for petroleum-impacted sites. The default search distances may be expanded or reduced in the upgradient, downgradient, or cross-gradient directions by the Environmental Professional based on experience in the local area and applying professional judgment to factors such as where a well-defined regional groundwater flow direction is identified, or whether other geologic features such as low permeability soils or hydrogeologic boundaries such as rivers or streams exist which would tend to limit the potential for migration of groundwater or vapors in a particular direction.

7.2 VES Search Results

NV5 identified several sites of potential concern within the VES search radii. However, based on our review of governmental database records, regulatory agency files, and historical resources referenced in Section 5.3, none of the sites of potential concern are considered to represent a VEC.

8 FINDINGS

Based on the Site reconnaissance, review of historical and available documents, and interviews, NV5 finds the following:

8.1 Current Site Activities

At the time of our Site reconnaissance, the Site was vacant, undeveloped land.

8.2 Historical Site Activities

The Site has been undeveloped as early as 1948.

8.3 Off-Site Activities

The Site is located within an area primarily comprised of mixed residential and commercial use. Current uses of adjoining properties include a residential community and vacant land to the north; the Joshua Tree Brewery and several vacant residential homes to the east; Twentynine Palms Highway followed by several commercial retail and restaurant business to the south; and a residential apartment complex and vacant land to the west.

8.4 Data-Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps. No data gaps were identified by NV5 during this assessment.

9 CONCLUSIONS AND RECOMMENDATIONS

NV5 completed a Phase I ESA of the property located at the northwestern intersection of Twentynine Palms Highway and Sunset Road in Joshua Tree, San Bernardino County, California. The ESA was performed in conformance with the scope and limitations of ASTM E1527-13 standards. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. The assessment was performed to identify conditions indicative of releases and threatened releases of hazardous substances and petroleum products on, at, in, or to the Site.

Conclusions

No evidence of a Controlled REC, historic REC, REC, or VEC in connection with the Site was identified during this assessment.

Recommendations

No further assessment is recommended.

10 QUALIFICATIONS AND SIGNATURE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312.10. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

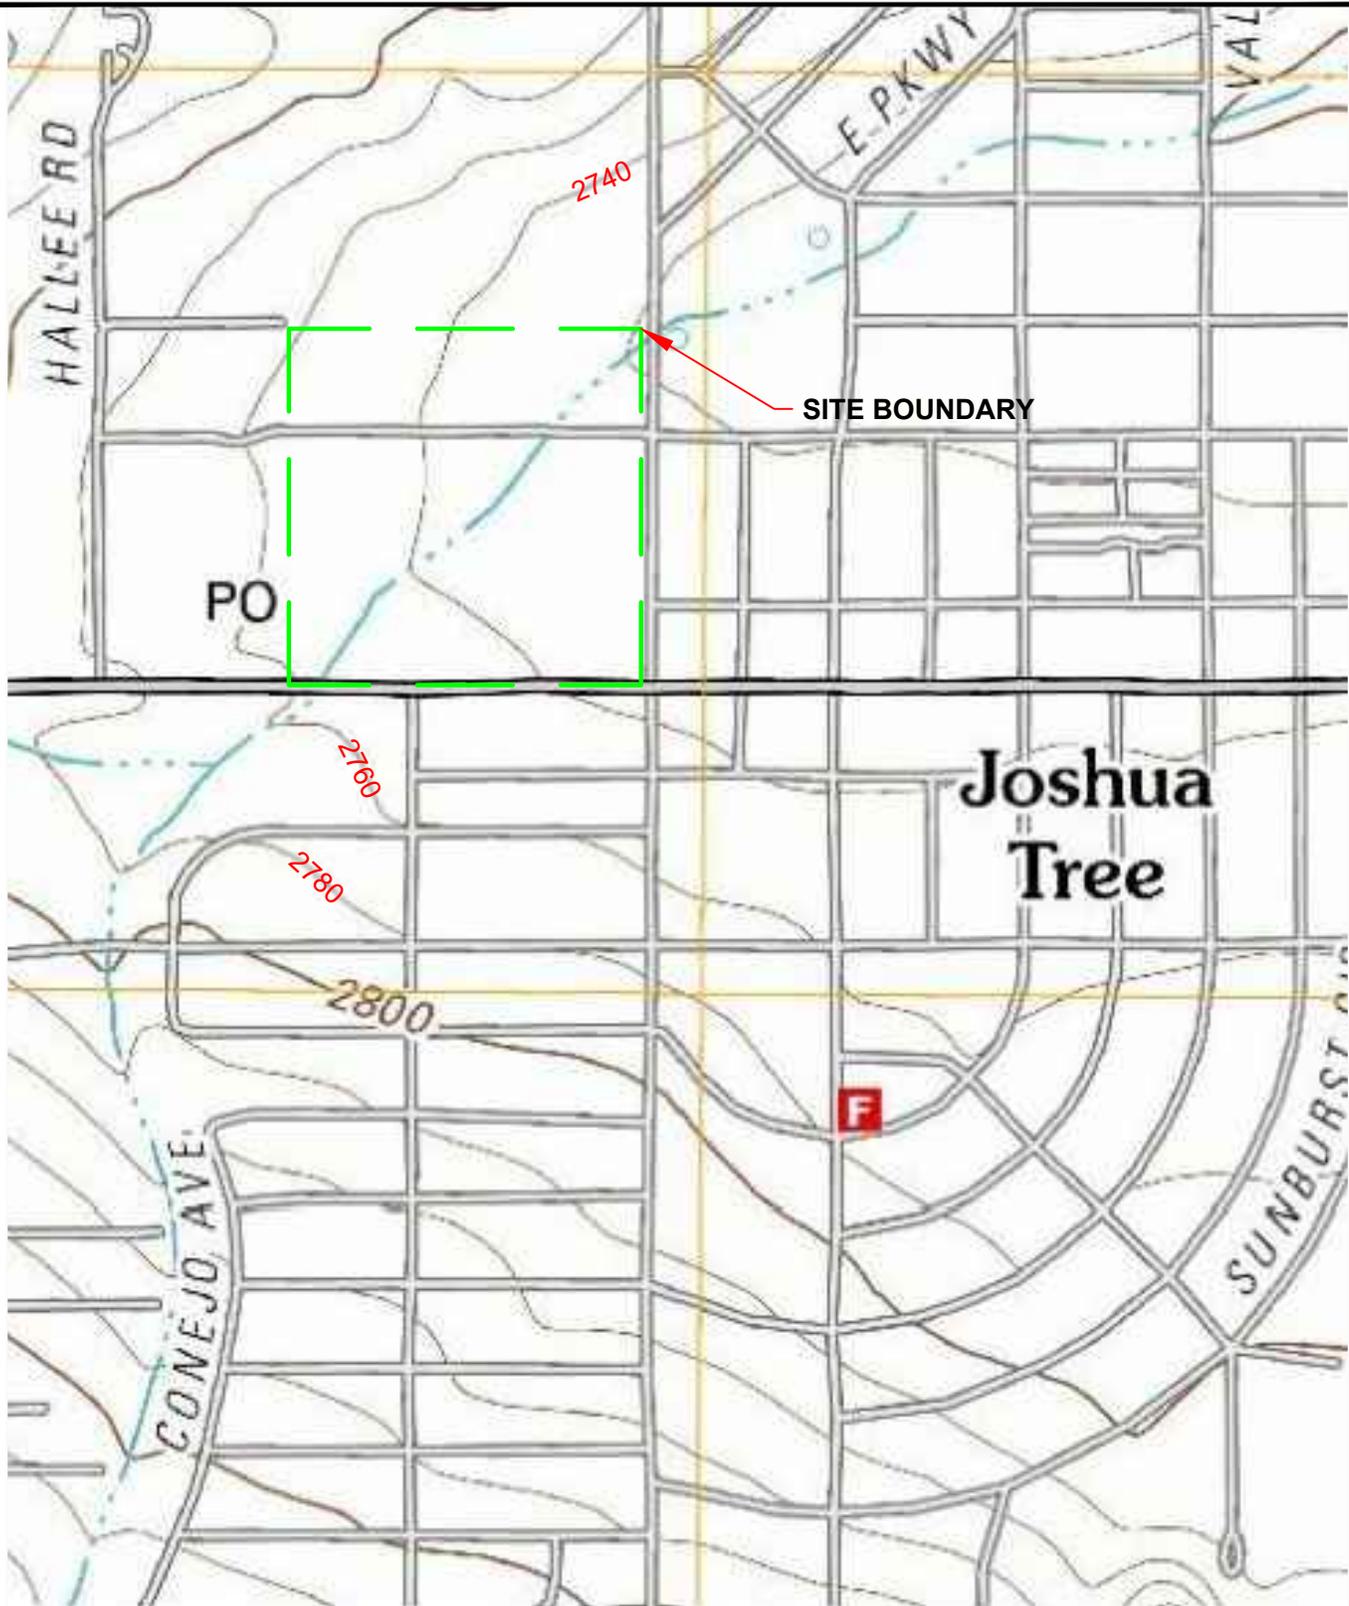

ERIC FRASKE, PE

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

RGA LUST..... Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 01/20/2021 has revealed that there are 2 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 01/20/2021 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

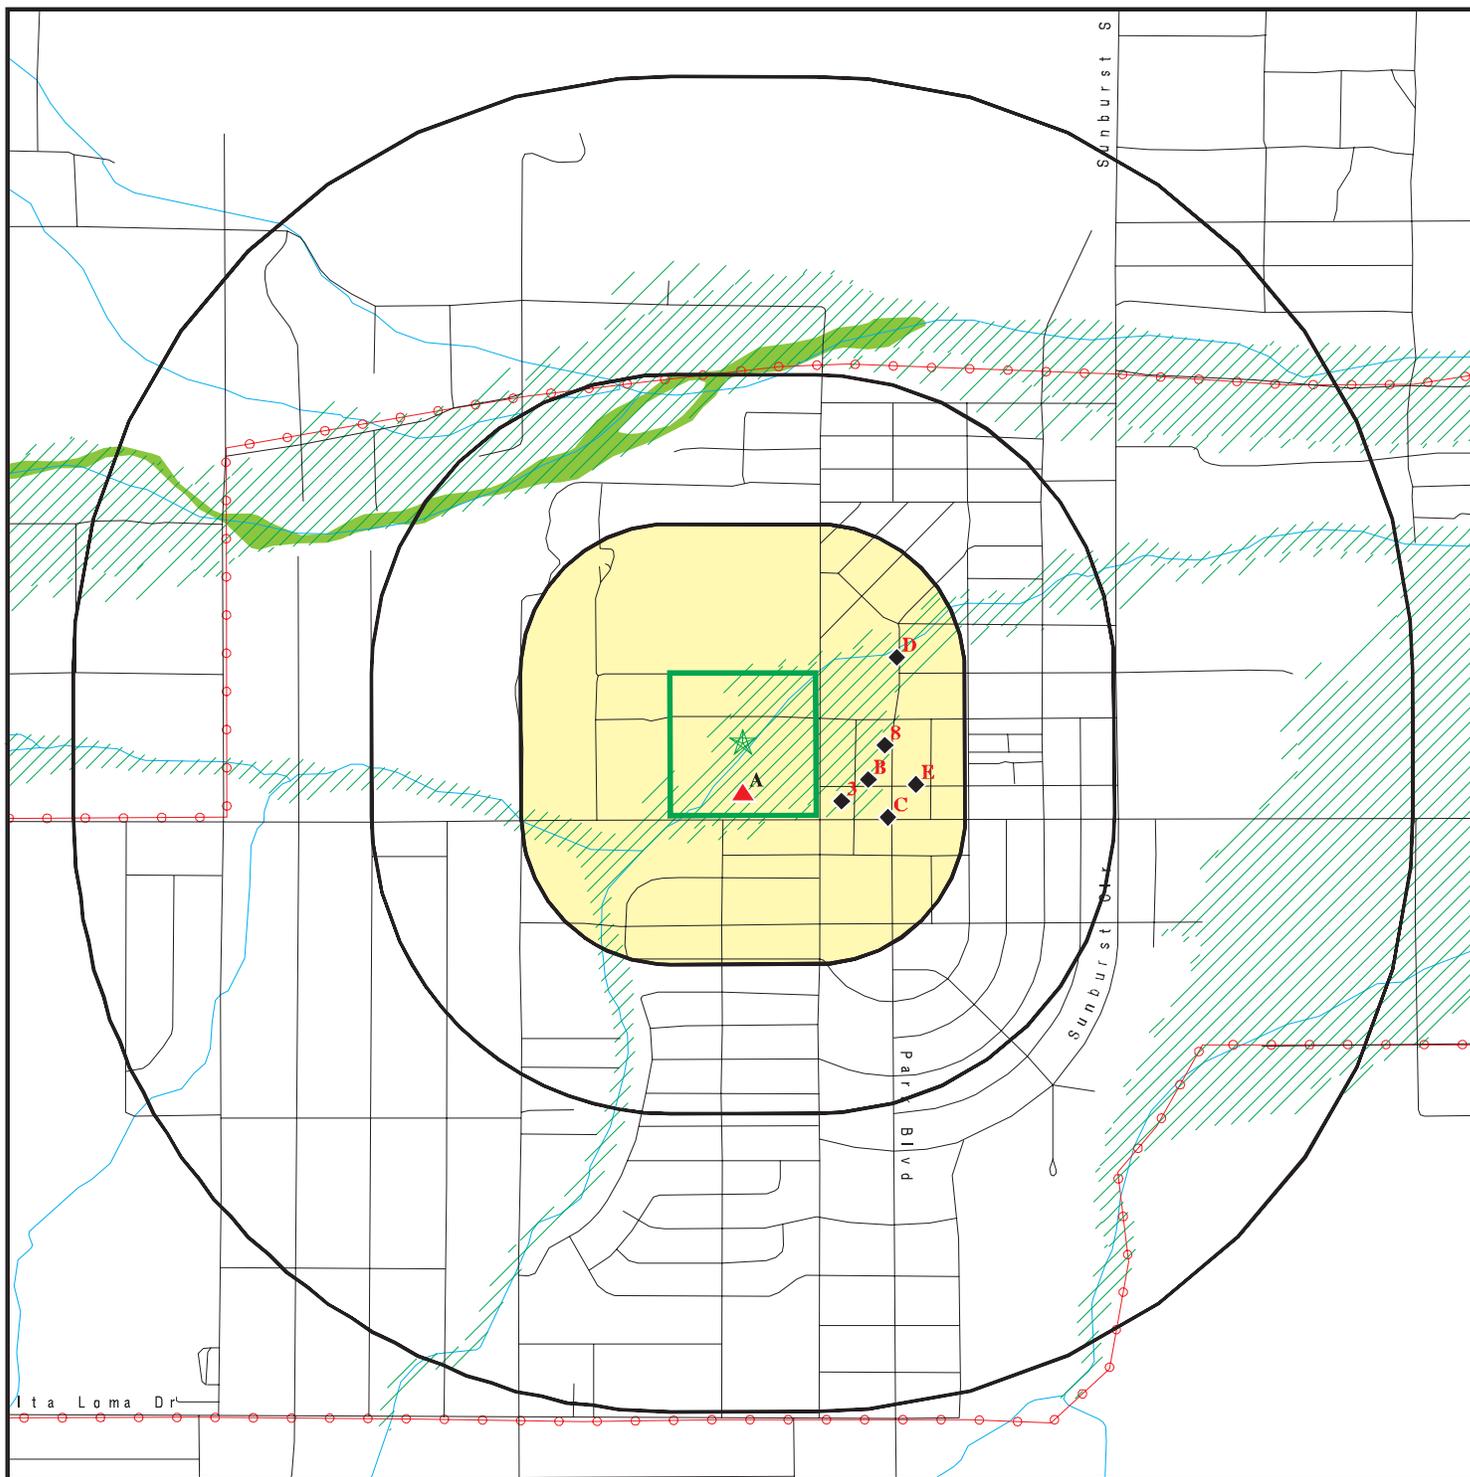

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 01/14/2020. OVERFILL PREVENTION TESTING/INSPECTION CANNOT BE COMPLETED TO DATE DUE TO CONTRACTOR NOT POSSESSING THE CURRENT CERTIFICATIONS. DAVE LOPEZ JUNIOR WILL BE SCHEDULED TO BE ONSITE WITHIN A FEW HOURS TO COMPLETE THE TEST. SUBMIT REPORT OF OVERFILL TEST TO THIS DEPARTMENT WITHIN 7 DAYS. THIS IS A RECALCITRANT VIOLATION NOTED BY INSPECTOR SAGUAN ON 11/26/2019.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: N/A
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 05/03/2021
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/12/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 10/20/2020	Telephone: 860-424-3375

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

South Map:	5629026 JOSHUA TREE SOUTH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

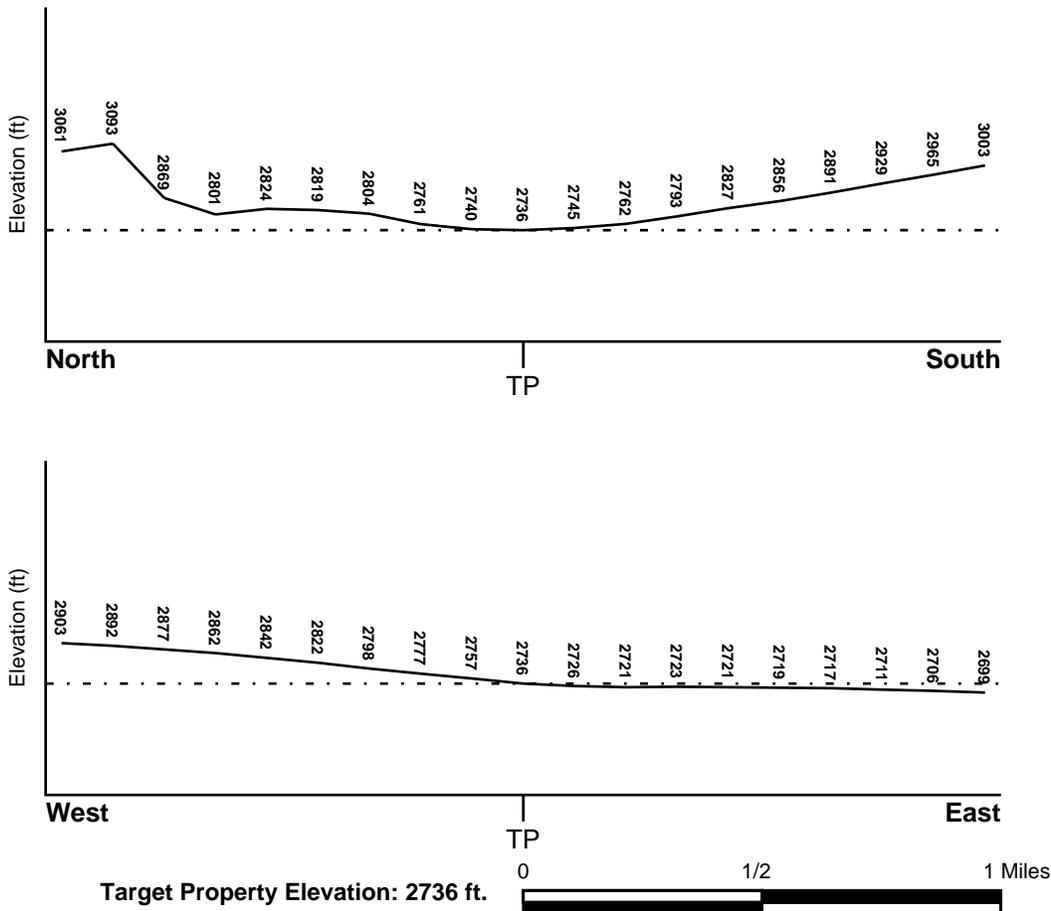

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
JOSHUA TREE NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: HANFORD

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	12 inches	coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60
2	12 inches	50 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60
3	50 inches	60 inches	gravelly - fine sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 6.00 Min: 2.00	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
gravelly - sandy loam
loamy sand
stony - loam
cobble - loamy sand

Surficial Soil Types: sandy loam
gravelly - sandy loam
loamy sand
stony - loam
cobble - loamy sand

Shallow Soil Types: gravelly - loam
very cobble - loam

Deeper Soil Types: stratified
gravelly - sandy loam
weathered bedrock

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

SUBJECT: CERTIFIED RECORD SEARCH FINDINGS
APN #: 0602-371-06-0000
JOSHUA TREE, CALIFORNIA

This is to confirm that the OFM Hazardous Materials Division (HMD) has searched its records for any file(s) pertaining to the subject property, as described in your request, and finds that no records exist for the above site description(s).

Records maintained by OFM-HMD date back to mid-1980's. Records searched include:

- facilities with hazardous waste generator permits, hazardous materials handler permits, underground storage tank permits, universal waste permits, tiered permits, EPCRA facilities, RMP facilities, Cal ARP facilities, and/or waste recycling generators, including inactive and/or out of business records, as well as non-permitted facility actions;
- logs of permits issued for the removal, installation, and/or modification of underground storage tanks;
- records and databases pertaining to illicit dumping, spill reports and release notifications, and complaints;
- incidents responded to by the hazardous materials emergency response team;
- and sites undergoing remediation for contaminated soil and/or groundwater.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by NV5 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

PHASE I ESA QUESTIONNAIRE

ASTM E-1527-13 provides Landowner Liability Protections to purchasers of commercial property if All Appropriate Inquiry (AAI) is completed during property acquisition. The answers to the questions below provide information to the Environmental Professional to assist the User of the referenced Phase I ESA to comply with the User Responsibilities of AAI.

Property Description			
Property Address:	61500 29 Palms Highway, Joshua Tree, CA		
Current Occupant:	Vacant land		
Current Owner:	One Tree Hill L.P.	Phone:	415 310 0326
Site Contact:	Eric Kleinbuch	Phone:	
Potable Water Provider:			
Electricity Provider:			
Natural Gas Provider:			
Sanitary Sewer Provider:			
Solid Waste Disposal Provider:			
Hazardous Waste Disposal:			
Reason for Performing ESA			

Are you aware of any environmental liens that have been filed or recorded under Federal State, local or tribal law? If yes provide details.

Yes No

Are you aware of any activity or land use limitations (AULs), engineering controls or land use limitations that have been filed or recorded under Federal, State, Local or Tribal Law? If yes, provide details.

Yes No

Do you have any specialized knowledge of the property or experience related to the subject property or nearby properties so that you would have knowledge of chemicals or processes used at the property? If yes, provide details.

Yes No

Is the acquisition price differing from the fair market value of the property?

Yes No

If there is a difference, have you considered a lower price is due to contamination known or believed to be present at the property? Please provide details.

Yes No

As the user of this ESA, based on your knowledge and experience with the property, are there any obvious indications of the presence or likely presence of contamination at the property? If yes, provide details.

Yes No

Are you aware of any information that would help the environmental professional identify conditions indicative of releases or potential releases, including past uses of the property, uses of chemicals at the property, or environmental cleanups that have taken place at the property? If yes, provide details.

Yes No

Do you know of any pending, past or threatened litigation or administrative proceedings related to hazardous substances or petroleum products on, in or from the property or any notices regarding possible violations of environmental laws or possible liability related to hazardous substances or petroleum products? If yes, provide details.

Yes No

Are there any chemical storage areas or hazardous material storage areas located at the subject property?

If yes, provide details.

Yes No

Are there any current or historical Aboveground Storage Tanks or Underground Storage Tanks? If yes, provide details.

Yes No

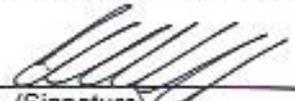

Are there any current or historical wastewater treatment systems, clarifier/interceptor systems, or grease trap systems associated with the subject property? If yes, provide details.

Yes No

Are you aware of the existence or location of the following documents related to the subject property, and if yes, can copies be made available for review by the Environmental Professional?

- Previous Environmental Site Assessment reports or Investigation reports
- Environmental Permits
- Registrations for underground storage tanks (USTs)
- Spill Prevention Containment and Contingency Plans (SPCC)
- Stormwater Pollution Prevention Plans (SWPPP) *In floodway?*
- Risk Assessments
- Hydrogeologic Reports related to the property or surrounding area
- Notices of Violation from governmental agencies regarding past or current violations of environmental laws or related to environmental liens encumbering the property
- Hazardous waste manifests or generation reports
- Recorded land and activity use limitations
- Geotechnical Studies

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

The Honorable Dawn Rowe
Chair, Board of Supervisors
San Bernardino County
385 North Arrowhead Avenue
San Bernardino, CA 92415

IN REPLY REFER TO:

Case No.: 21-09-0621P
Community Name: San Bernardino County, CA
Community No.: 060270
Effective Date of
This Revision: **August 2, 2023**

Dear Chair Rowe:

The Flood Insurance Rate Map for your community has been revised by this Letter of Map Revision (LOMR). Please use the enclosed annotated map panel(s) revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals issued in your community.

Additional documents are enclosed which provide information regarding this LOMR. Please see the List of Enclosures below to determine which documents are included. Other attachments specific to this request may be included as referenced in the Determination Document. If you have any questions regarding floodplain management regulations for your community or the National Flood Insurance Program (NFIP) in general, please contact the Consultation Coordination Officer for your community. If you have any technical questions regarding this LOMR, please contact the Director, Mitigation Division of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) in Oakland, California, at (510) 627-7211, or the FEMA Mapping and Insurance eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP). Additional information about the NFIP is available on our website at <https://www.fema.gov/flood-insurance>.

Sincerely,

Patrick "Rick" F. Sacbbit, P.E., Branch Chief
Engineering Services Branch
Federal Insurance and Mitigation Administration

DETERMINATION

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Mapping and Insurance eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 3601 Eisenhower Avenue, Suite 500, Alexandria, VA 22304-6426. Additional Information about the NFIP is available on our website at <https://www.fema.gov/flood-insurance>.

LETTER OF MAP REVISION DETERMINATION DOCUMENT (CONTINUED)

COMMUNITY INFORMATION

APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway revision we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

COMMUNITY REMINDERS

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Mapping and Insurance eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 3601 Eisenhower Avenue, Suite 500, Alexandria, VA 22304-6426. Additional Information about the NFIP is available on our website at <https://www.fema.gov/flood-insurance>.

LETTER OF MAP REVISION DETERMINATION DOCUMENT (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Kathryn Lipiecki
Director, Mitigation Division
Federal Emergency Management Agency, Region IX
1111 Broadway, Suite 1200
Oakland, CA 94607-4052
(510) 627-7211

STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM and FIS report for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel(s) and FIS report warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Mapping and Insurance eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 3601 Eisenhower Avenue, Suite 500, Alexandria, VA 22304-6426. Additional Information about the NFIP is available on our website at <https://www.fema.gov/flood-insurance>.

**LETTER OF MAP REVISION
DETERMINATION DOCUMENT (CONTINUED)**

PUBLIC NOTIFICATION OF REVISION

A notice of changes will be published in the *Federal Register*. This information also will be published in your local newspaper on or about the dates listed below, and through FEMA's Flood Hazard Mapping website at https://www.floodmaps.fema.gov/fhm/bfe_status/bfe_main.asp

LOCAL NEWSPAPER

Name: *The San Bernardino Sun*
Dates: March 28, 2023 and April 4, 2023

Within 90 days of the second publication in the local newspaper, any interested party may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. Therefore, this letter will be effective only after the 90-day appeal period has elapsed and we have resolved any appeals that we receive during this appeal period. Until this LOMR is effective, the revised flood hazard determination presented in this LOMR may be changed.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Mapping and Insurance eXchange (FMIX) toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMC Clearinghouse, 3601 Eisenhower Avenue, Suite 500, Alexandria, VA 22304-6426. Additional Information about the NFIP is available on our website at <https://www.fema.gov/flood-insurance>.
